FOR ENGINES AND MACHINERY.

Can You Afford- to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell ENAMELINE, the Modern Stove Polish. Paste, Cake or Liquid If you are doing business for a profit it will pay you to handle our whole line.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

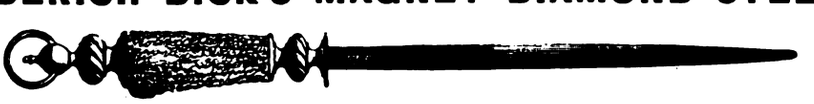
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

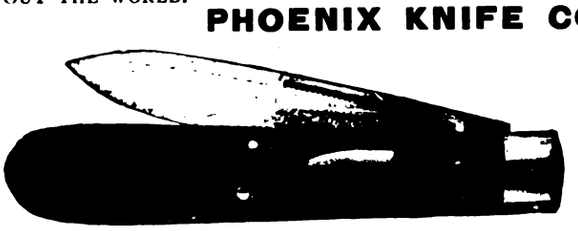
has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

We Want the Earth and We Want it Fenced in.

THE

ELECTRIC DROP STEEL FENCE RATCHET.

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

1st. It is simplest.
2nd. It is the lightest and strongest.
3rd. It is the most compact and rigid; no loose parts.
4th. Will tighten any length of wire desired.
5th. Adjustable to expansion and contraction.
6th. Can be attached to any point on the wire.
7th. It will tighten the wire uniformly because it draws equally from each way.
8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
9th. Can be used on any kind of post, either wood or iron.
10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
11th. When wire becomes loose or sags from use, it can be instantly tightened.
12th. No special wrench required; any wrench on the farm will operate it.
13th. The most important feature; it can be bought for **Less Money** than any other good ratchet on the market.

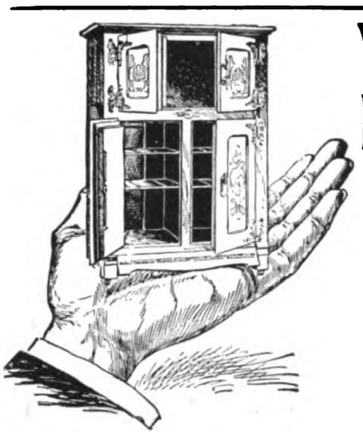
A BIG CUT

Can be made in a side of beef with a 10-inch Butcher Knife, some one has said, and we add, if it is a **GOODELL** Knife, properly ground, big cuts may be made indefinitely without further sharpening.



Our Butcher Knives are made in the right way, and from the right material, and take and hold an edge. We used more than sixty-four tons (or to be more exact, 129,792 pounds), high grade crucible and double shear steel in butcher knives last year.

We guaranteed every knife, and, while we do not pretend to say there was not a poor one in the lot, we do say the percentage of unsatisfactory knives was so small as to surprise you.

We make almost everything in the knife line (except pockets) needed in any ordinary cutlery stock, and are now in better condition for prompt shipments than for some time past.

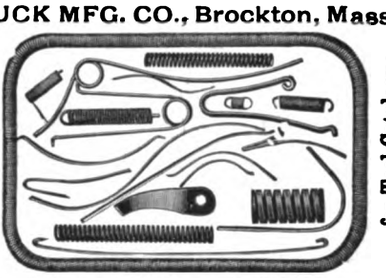
Our New York Office is No. 10 Warren Street.

GOODELL COMPANY, Antrim, N. H.

We Hold This Refrigerator Up--

As the perfected product of twenty years' experience in manufacturing. We know the Leonard Cleanable will stand every test to prove its superiority. Thousands of satisfied customers will tell you of its merits. You run no risk in buying it, because it is made right. It is made with eight walls to make insulation perfect, and the constant circulation keeps the air pure and cold. Don't be deceived by inferior kinds that may look well—on the outside.

The Leonard Cleanable Refrigerator



Has many special features—talking points—which capture the sales. We are very liberal with electrotypes, circulars, etc. Write to us for catalogues and prices. Secure the agency.

"Bright and Newsy."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

BICYCLE LAMPS FOR GAS AND KEROSENE.

Banner Gas Lamp.

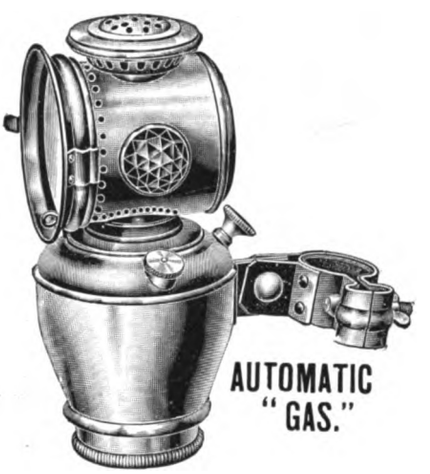
SELF OPERATING.

The lamp regulates its own flame, and requires no attention after lighting.

Carbide chamber cannot be overloaded.

Has Patent Bracket, once adjusted always adjusted; no trouble to remove or replace the lamp.

Dash-Board Bracket for Banner Gas Lamp.



Dust-proof burner ¼-foot fish tail flame.

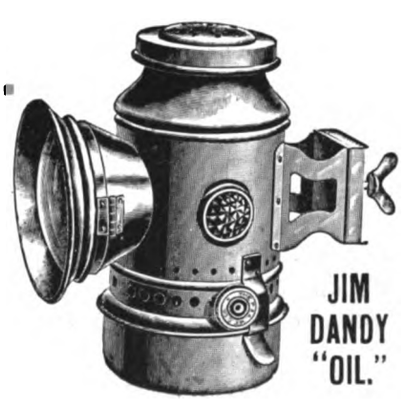
Burns 4 to 6 hours, according to grade of carbide.

Automatic Gas Lamp.

Burns Pencil Flame, and is as its name implies "self operating." Shows big field of light, requires no attention after lighting, burns four hours.

We recommend for medium volume of light, and those desiring a small light lamp.

Banner Oil Lamp.



Not an experiment. Guaranteed wind proof. Tested by thousands in past seasons and proven satisfactory. Either rigid or spring back.

FINE PADLOCKS.

The largest and most attractive line in the market. Pin tumbler padlocks, with Corbin ball bearing cylinders Wrought padlocks, with artistically designed cases. Heavy cast bronze patterns **Send for Catalogue.**

CORBIN CABINET LOCK CO.,

NEW BRITAIN, CONN.

NEW YORK. CHICAGO. PHILADELPHIA.

Mr. Hardware Merchant:

If you are selling lasts and nails, better sell sorted half-soles too.

We make 7 qualities (7 thicknesses in each); but you can't sell the finest, and had better not sell the poorest.

You want middling grades—not the very finest—not the worst. Most dealers, in your line, do not know that a side of leather contains many qualities; and they are influenced by price alone. We advise you to buy some of X50, X42, and X40; more of B50, B42, B40, and B32; "X" means good quality, "B" fair quality, and the figures mean thickness of package of dozen pairs; 5 4½ 4 and 3½ inches.

Our "C" is too poor; we think you had better sell "X" and "B." "CC" is not fit for anybody or anything, no matter how cheap you get it. Sell what your customers want, and build up and keep your trade; don't sell poor stuff and lose it.

This is the part of the leather trade that you can do, and belongs to you. Handy besides.

If you buy in barrel lots, write us for prices; if smaller, write all the same, and we will tell you what jobbers are near you.

WILL IT PAY

To handle a line of paints? is naturally the question that arises when the subject is brought to the attention of Hardware Dealers. That it pays and pays well—is evidenced by the number of dealers who sell our paints. Some of the best firms find it very profitable to handle our goods, and those contemplating laying in a stock of paints should take advantage of our long experience in this line by consulting us.

Baldwin Refrigerators.

1900

SEES us with a better line of refrigerators than ever. We have added a line of solid oak goods. We have completely remodeled our ash and soft wood leaders. We have a new line of roll-top grocers' refrigerators.

Our goods are constructed on correct scientific principles. We have the strongest, most effective removable flue on the market. A positive circulation of dry air. No odors. No dampness. Air-tight waste trap. Our own special patented lever lock. Rubber around doors to save the ice. 125 varieties. Designs that are "right-up to-now." "Baldwins" are not sold under a dozen different names or labels to a dozen different dealers in one town. . . . . .

Our catalogue is ready. It will pay you to investigate.

Baldwin Refrigerator Co., . .

HARDWARE

The Pike Mfg. Co., Pike Station, N. H., want to buy a machine for cutting box boards out of slabs; also a machine for making small handles, dowels, skewers and similar goods from hard wood.

At the meeting on March 23d of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership in the Club:

J. Frank Hackstaff, Advertising, No. 5 Beekman Street.

James A. Farrell, American Steel & Wire Co., No. 71 Broadway.

Vernon C. Brown, Hardware, Gerken Building.

Geo. F. Wiepert, Geo. H. Sargent & Co., No. 149 Leonard Street.

Charles Morrill, No. 35 Warren Street, New York, manufacturer of saw sets, punches and other mechanics' tools, on or about May 1st intends moving into the fine new building corner Broadway and Chambers Street, known as the Broadway-Chambers, where handsome and commodious offices have been rented.

On Saturday evening, March 31st, nearly three hundred employees of the John Pritzlaff Hardware Co., Milwaukee, Wis., participated in a banquet which was tendered them by the company. It was held in the main dining-room of the Plankinton house in that city. The banquet was designed to commemorate the successful completion of a full half century of work enjoyed by John Pritzlaff in the Hardware business.

Our editorial sanctum has been beautified recently by the reception from the Coldwell Lawn Mower Co., Newburgh, N. Y., of a highly-artistic picture showing Cupids in various attitudes and clothed in the all-together, disporting with Imperial lawn mowers over a finely illuminated lawn. This novel and attractive conceit in a line of advertising not usually so original in character is a quite noticable deviation, and attracts considerable attention.

The next meeting of the New England Hardware Dealer's Association is called for April 11th at the United States Hotel, Boston. There will be, as usual, a subject for discussion, which will be: "What new lines of goods can be added to the retail Hardware stock that may be sold with profit by the dealer?" The members of the Entertainment Committee for this meeting are D. Fletcher Barber and Hiram G. Janvrin, of Boston, and Samuel H. Thompson, of Lowell.

The Warren Axe & Tool Co., Warren, Pa., contemplate adding greatly to their facilities for manufacturing the axes and tools, with which their name is identified. They have recently let a contract for a new steel-frame building. It will be equipped with two boilers of 50 horse-power, two engines of 50 horse-power, two feed-water heaters, two pumps and a blower. The company are sole manufacturers of the Sager patent chemical process axe. The officers are Wm. Muir, president; H. P. Stone, general manager and treasurer, and F. S. Shreves, secretary.

The Troy *Times* states that the American Axe & Tool Co. has decided not to rebuild the scythe shop at Ballston which was destroyed by fire recently. This means a serious loss to Ballston, as 100 men are deprived of employment. The plant was established sixty years ago by Isaiah Blood.

George B. Curtiss, No. 96 Chambers Street, New York, Hardware manufacturers' agent, etc., on or about May 1st will remove to Nos. 84–86 Chambers Street, where he will have double the floor space now occupied by him. The building having passenger elevator and modern improvements, his new location will be found an exceedingly advantageous one.

Phillip Gross Hardware Co., Milwaukee, Wis., who have put in a complete line of guns, rifles, baseball and other sporting goods, would be glad to receive copies of catalogues, etc., from the manufacturers in this line.

The series of articles contributed by G. H. Dirhold, Rockford, Ill., in the columns of *Hardware* upon the subject of the sale of sewing machines by the Hardware trade is concluded in this issue. He desires to dispose of the series in shape for booklet purposes to a single jobber in any State who may contemplate the sale of sewing machines to his established trade. He may be addressed as above.

E. Bertram Pike, treasurer of the Pike Mfg. Co., Pike Station, N. H., intends sailing on the *Kaiser Friederich*, of the Hamburg-American Line, April 12th, on a European trip, one of the principal objects of which will be to install their elaborate exhibit at the Paris Exposition. It is part of his programme to spend a few days at the razor-hone quarries in Belgium, and make a business trip to Germany and other localities, returning to the United States early in June.

Charles Parker Co. and Parker Bros., now at No. 90 Chambers Street, New York, will, on or about May 1st, move to No. 32 Warren Street, on the northeast corner of Church Street. They will have much more commodious and better lighted quarters, 85x25 feet, consisting of street floor and two basements. The main floor will be used for sample rooms, the stocks being carried on the other floors. It is intended to have a special department for lamps, and considerable space will be used for displaying a new line. The establishment is exceptionally well lighted, even to the subcellar. The floors are steam heated, and there are two elevators.

Underhill, Clinch & Co., No. 94 Chambers St., New York, agents for "Bradley" line of axes and tools, and jobbers in Hardware and kindred goods, have at last decided upon making some important changes in their business quarters in order to accommodate the large increase in their business brought about by the prosperous conditions of the present times. They have leased the entire building next door, No. 96, and this being an exact duplicate in area of the building now occupied by them, will give them five floors and two basements. This, by doubling their present capacity, will enable them to use fourteen floors after May 1. No. 96 will have the store floor fitted up as a sample room, while the street floor in their present building can be used for their requirements in city orders and local delivery. It is in contemplation to reserve one of the basements, entirely for the shipment of out-of-town orders. Among the improvements will be an electric elevator in No. 96, which in addition to the one already in use, and a dumb waiter, will greatly facilitate the prompt shipments for which this progressive firm is noted.

HARDWARE

VOL. XXI. APRIL 10, 1900. NO. 1.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

1890.—"Hardware."—1900.

As is only too manifest in our offering to-day we are in the hands of our friends and are permitted to return their compliments with emphasis. This interesting issue of *Hardware* is an outcome of the admiration and support of its friends and subscribers, who have made it possible for the tenth anniversary of its prosperity to be celebrated in this unmistakably joyous manner.

In the glory of the present moment we but reflect the prosperous conditions of the noble industry, whose interests we espoused a decade ago, and have never faltered in our fidelity from that memorable day; never, through all the years of adverse conditions, gloom and uncertainty, even up to the present moment when the sun of industrial activity gilds the hill-tops of American labor with hope and encouragement, and scatters over the labor filled valleys, with their glowing forge fires the certainty of employment in plenty, for many months to come.

It is right and proper for our hearts to be filled this day with gladness; our souls to be lifted up by the garnered fruits so lavishly showered upon our efforts in doing honor to this the tenth anniversary of our birth.

It will need but a casual glance through the varied contents of this issue of our paper to see how grandly our patrons have responded to the inspiration of the occasion; and in the most artistic and graphic manner, filled our pages with their several announcements; coming "not singly but in battalions;" not alone in individual pages, but in double, and even quadruple strength; testifying to their appreciation of a Hardware trade journal that is all its name implies; undeviatingly loyal to a single industry, and supporting by its sustaining influence every high impulse and honest endeavor emanating from its devotees.

In testifying our gratitude to the patrons of our journalistic enterprise, now ten years old, we desire to return our sincerest thanks to those faithful friends who have stood by us since the inception of our career; who have placed implicit confidence in the honesty of every motive which has guided our journal to its present successful issue. We thank them most heartily, not with the ordinary acknowledgment of courteous speech but from the depths of a heartfelt gratitude. To those who are with us heart and soul on the present occasion, we ask the meed of their honest appreciation of our earnest endeavor, and the promise, that if we continue to deserve their consideration and support, a fair share of their favors in the future may prove the precious jewels in the crown of success, which we hope will continue to make *Hardware* the shining example it has ever been since its foundation.

To those of our faithful friends and correspondents, who have embellished our pages by the thoughtful articles we are gratified to print in this Anniversary Number, we return our sincere thanks. Coming from gentlemen of experience, busy as they all are in the prosecution of a business requiring from its followers more than an ordinary amount of mental application and honest labor, we thank them most heartily for this evidence of their appreciative commendation and we ask only for an opportunity in the future to show some degree of reciprocation. We are confident that in witnessing the success of our paper they cannot regret the feeling of having contributed to the accomplishment of this end.

We trust that the prosperous conditions surrounding the Hardware industry at the present time will remain with us, and prove the basis of successful achievement for years to come—"That all the clouds that lowered upon our house, are in the bosom of time's ocean buried;" that the present year be blest with good fortune, although customarily regarded as one of uncertainty and unfruitfulness, on account of the political agitation which usually accompanies a Presidential election. May it be enabled through business activity to still pursue the even tenor of its way, experiencing no unprofitable setbacks, no interruptions to national progress, no check to our commercial advancement, until the integrity of American labor, the majesty of our mechanical supremacy, shall be known and acknowledged in every portion of the world where a demand is created for the products no country can like our own so thoroughly supply.

Editorial Trade Review.

The manufacturers are not exclaiming loudly that the orders are coming in so fast proper attention cannot be given to them, and prompt shipments need not be expected. This may have been the case last year, when they solicited gladly the early orders they subsequently obtained, and they were orders in which a strata of speculation as to quantities enabled the manufacturers to take plenty of time in filling a number of them, even running over the first of the new year.

The result is manifest at the present time, in the absence of orders of any especial volume for Spring requirements. The road representatives of prominent

Digitized by Google

producers found the specifications for Spring trade dwarfed exceedingly in many sections, by excess of goods on hand stored in jobbers' warehouses and awaiting the natural movement of the season's traffic, to stimulate which concessions are frequently made by the jobbers themselves, while the manufacturer holds fast and firm to prices based on present costs of raw material, on which few, if any rebates of moment have so far influenced the market.

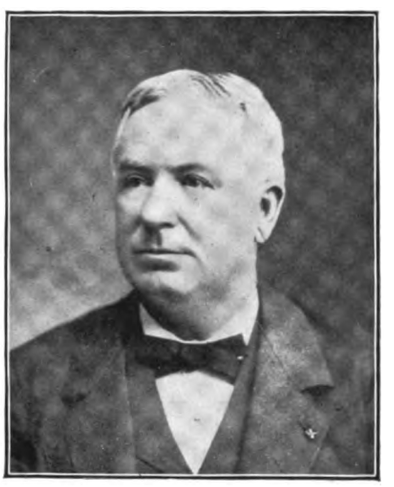
It is firmly believed, however, by the jobbers and their travelers that the retail trade is not so largely stocked up; this branch of the business is not so apt to have a large surplus lying idle in bank, and consequently are not so prone to speculate in their purchases. The retail requirements change materially from season to season by over anticipations regarding the extent of local business, and frequently the least sanguine are apt to be safely conservative and become the best buyers in a waiting season like the present.

The builders, who have been figuring on quite an impetus being given to their industry this Spring, are greatly handicapped by strike disturbances, a general demand for increasing wages or shorter hours—virtually the same; this, with the comparatively higher quotations governing their Hardware requirements as well as in other departments, have limited actual employment and stultified enterprise.

The disturbing influences among the mechanic forces of Chicago and Cleveland checked purchases for shop supplies and factory requirements, the file trade being the principal one which seems to have prospered with a good demand, notwithstanding the advanced prices which are thoroughly established and carefully maintained.

In making comparison with the sales of a year ago, on the dollars and cents basis of value, it must not be lost sight of that everyone at the earlier date was impressed with the idea that a general advance in prices was being fostered, and it behooved the trader to make his season's purchases as early as possible to obtain certain advantages.

The steady market on wire products, which has so long been without material change, does not appeal to the general purchaser of large stocks, and no large increase is noted in such sales. No important concession in price is looked forward to by the trade, nor is any advance of moment anticipated. The market will be governed entirely by the significance of the Spring demand, which during this month must show its strength or weakness, stocks in the meantime being accumulated at the mills.



How Are Hardware Jobbers To Meet the New Conditions?

Since your last anniversary number was printed there have been so many important changes in the conditions and methods of doing business, that it seems proper that we should in some way try to discover why such important changes have been made and how we can best accommodate ourselves as jobbers to the extremely new conditions.

The past year has without doubt been the most notable and the most profitable one in the memory of the present generation of Hardware men.

One year ago advances were made daily, buyers were fairly tumbling over each other in the race for placing orders, purchases were made regardless of quantity and apparently without comparison to the amount usually sold during previous seasons. Manufacturers were quickly loaded up with orders far in advance of their ability to produce, and were compelled to advance prices to a point where buyers would hesitate to make contracts that they might see some date in the future when they could hope to close up their back order books.

There is no doubt that the formation of many large incorporations who merged practically all the plants making goods in their respective lines made it possible to make and maintain most of the advances thus made. The idea soon became prevalent that the surest and quickest road to wealth was through the abolishment of anything in the way of competition, hence many, perhaps most of the manufacturers of iron and steel and other metals, and of all sorts of merchandise made from metals, were eager to form friendly alliances with those who had been hitherto sharp and defiant competitors. Many combinations were formed, and as soon as any one line of goods was placed in the hands of any of the so-called syndicates or large incorporations, the prices, with scarcely an exception, began to advance. That the combinations thus formed proved exceedingly profitable there is no doubt. That the pools, syndicates, trusts or other large aggregations of

COL. JAMES R. NUTTING.

capital formed to reduce or to do away with competition, have come to stay I verily believe.

Our relations to the manufacturer have changed. Only a short time ago he came to us to sell; we now go to him to buy. The seller has the advantage, his prices and terms are arbitrary. We can buy or let alone. Of course, as a rule we have the preference, but if we do not accept the conditions gracefully, the manufacturers can market their wares direct to the consumer, retail trade or department stores.

On the other hand, competition among ourselves is as fierce as ever. Expenses of doing business are growing greater. Margins are gradually getting smaller. Would it not be well in order to enable us to meet the present radical changes in conditions to also consider the advisability of forming some sort of a friendly alliance that would aid us in getting better returns for our labor and for capital invested as Hardware distributors.

James R. Nutting.

Visitor in Bird Store: Is this the place that advertises for a man to retail imported canaries?

Bird Merchant: Yes. Are you looking for a job?

Visitor: No, I came in just out of curiosity. I was wondering how the birds lost their tails.

A solder for aluminum has been patented by an Illinois man, the components of the material being an alloy of tin, bismuth and zinc, the tin being considerably in excess of the other ingredients in the solder.—*Ex.*

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 143 Chambers Street, New York City.

QUESTION.—Some years ago, being in need of money, I made a mortgage on my property in New York, and agreed to pay the lender more than the legal rate of interest for the loan. The loan has become due and my creditor has demanded payment of the loan and interest; I should like to be advised of my legal rights through the legal column of your paper.

REPLY.—In New York State all mortgages and other contracts, except call loans over $5000 and one or two other exceptions, are void where more than the legal rate of interest is taken or bargained for. You may sue in equity to recover the usury paid, if any has been paid, or for the cancellation of the usurious instrument by depositing or tendering the principal sum borrowed and legal interest to the lender. The borrower may set up usury as a defense to the mortgage. This privilege is however personal to the borrower, and does not extend to his representatives or his assignees. If the lender was an individual banker within the State, or a State bank, the same rules as apply to usurious loans made by national banks would apply, and the interest alone and not the principal would be forfeited. In New Jersey the penalty for usury is forfeiture of all interest with costs. The States have different usury laws, some States having no usury laws. New York is among those whose laws are the most beneficial to the borrower.

QUESTION.—Immediately prior to our late war with Spain I and my partner were in partnership with a Spaniard who represented our interests in Spain, and who during the continuance of the war resided there. During the war my Spanish partner made several contracts in the name of the firm, which contracts were, as he knew at the time he made them, contrary to the policy of our firm, and which I repudiated as soon as I heard of them. Are these contracts binding on our firm?

REPLY.—A partnership between persons residing in two different countries is at least suspended, if not determined, by the breaking out of war between those countries. We are, therefore, of the opinion that your partner could not bind your firm by an act of his as the agent of the firm during the continuance of the war.

QUESTION.—Some time ago I rented a building which I still occupy under my lease. Within the last few months my landlord's neighbor built a large building next to the one which I occupy, and as a result my landlord's building has settled to such an extent that the Building Department in New York City has condemned the building as unsafe, and has given my landlord orders to make repairs or tear down the building. The landlord has made certain repairs and has damaged some of my goods. Can I sue the landlord for damages to my business caused by his making these repairs?

REPLY.—It has been held that a tenant is not entitled to damages for an entry by the landlord upon the requirement of the Building Department for the purpose of making repairs necessary to place the building in a safe condition, where due care is taken to avoid interfering with the business of the tenant. On the facts as they are here presented we are of the opinion that you could not recover damages from your landlord unless he failed to exercise due care in the performance of the requirements of the department.

QUESTION.—I delivered goods to my agent in Albany, N. Y., to be sold there on my account. Two days after the goods arrived they were destroyed by fire. I wish to hold my agent responsible for their loss. Can I do so?

REPLY.—In the absence of any special agreement between you and your agent to the effect that the agent would be responsible for the loss of goods by fire, you cannot hold your agent liable for the loss unless you can show that he was negligent in the care of your goods, and that on account of this negligence they were destroyed.

Tower & Lyon's Specialties.

This old-established firm has been among the substantial patrons of *Hardware's* advertising columns ever since the earliest numbers, and in the present issue they occupy a prominent position on page 13, while on the succeeding page the Union Hardware Co. exploit their varied products with equal force.

The Tower & Lyon lines of Hardware Specialties and Fine Tools are everywhere recognized as of the highest quality and finish. Chaplin's Patent Planes have met the appreciation and approval of the best mechanics, the corrugated bottom giving ample air space, reducing the friction to a minimum, the checkered rubber handle giving a firm and easy hold.

The Champion Screw Drivers, invariably referred to as the standard, are too well known to need description. The Champion Cabinet Screw Drivers are made with slender blades for special and light work.

The Clark's Improved Pattern Expansive Bits give an improved method of adjusting the cutter, and have the shank graduated for depth; they are of superior finish, and thoroughly tested and guaranteed.

The Cyclops Nail Puller, with curved foot handle, gives the operator absolute control, enabling him to guide both jaws clearly and quickly, and saves any chance of injury to his hand from the blows of the ram.

Tower's Combination Engineers' Wrench is a combined nut and pipe wrench, made in long and short nut, and with pipe cutter. The sliding jaw supports and stiffens the bar. When used as a pipe wrench the pawls grip and release the pipe quickly and firmly without crushing.

Mention should also be made of Wood's Patent Levels with extension sights, Scandinavian Padlocks, Kraeuter's Tools-Ticket Punches, Calipers and Dividers, etc.; also of the unequalled line of Police Equipments, Tower's Double-Lock Handcuffs and Legirons, long conceded as the standard, both at home and abroad.

Among their leading specialties are the Stephens' Patent Vises, with cam and lever joint, which are "old and reliable," and unequalled for strength, firm hold and quick work. The Snediker's X L Rapid Vises have the advantage of instant quick adjustment, with the powerful, sure grip of the ordinary screw vise. They are made of extra weight, and possess superior strength and solidity.

Special attention is invited to Martin's Liquid Fish Glue, which is claimed to be of the utmost purity and of the greatest adhesive strength. It is put up in Martin's improved cans.

The line of Union Hardware Co. goods represented by Tower & Lyon is shown on page 13. They are leading manufacturers of Ice and Roller Skates, Dog Collars, Gun Implements, Wood Goods, etc.

Taking it all in all, the progressive house of Tower & Lyon may well be noted for the many lines of great utility controlled by them.

Reform in Second-Class Mail.

The House Post Office Committee recently ordered a favorable report on an amended bill excluding books or reprints of books from the mails as second-class matter, and raising from one cent to four cents a pound the rate for unsold publications returned by news agents.

A recent survey established the number of glaciers in the Alps at 1,155 of which 249 have a length of more than 4¼ miles; the French Alps contain 144 glaciers, those of Italy 78, Switzerland 471, and Austria 462.—*Ex.*

HARDWARE TOPICS BY THE WAY.

The cycle combine has failed to scare. That means half the battle lost.

The markets are truly electrified, but generators burn out occasionally.

People who are so busy that they forget to advertise are easily misled by streaks of prosperity.

The longitude of some buyers' views admits of no latitude. It's simply beyond the horizon of reason.

America now practically controls the file markets of the world. All competitive quotations are filed away.

Akron's new consolidated rubber plants are what the trade looked for. The India is now working on triple expansion.

Texas item: A rubber-heeled drummer fell victim to a hob-nailed boot. He was trying a new curry comb on the typewritist and didn't know she wore a wig.

The wick-burning stove has been variously superseded by wickless types, but the trade insists that the latter are no practical improvement. Doubtlessly the users back them up.

Cincinnati promises itself little of the automobile industry for many years to come. She hasn't the levels for the successful operation of autos as at present constructed, and is too big a horse carriage market.

Ohio reports an unprecedented activity in the "Corporation mill" market. Of the concerns applying for incorporation papers during the past twelve months, about 40 per cent. represented Hardware and metal interests, including specialties in cycle and autovehicular lines.

A Western Hardware house advertises through rubber stamps, i. e.: Any patron of the house may have executed free of charge all the rubber stamp paraphernalia he may need. The pads and stamps bear the business insignia of the donor, and a special department is devoted to this enterprise. The popularity of the gift is apparent in the popularity of the house.

The shortage of coal, especially the demand now accruing to Southern ports from Central and South America and the West Indies, will likely lead to a general development of what is commercially known as briquette coal. This production could be handled by the Hardware trade as regards the domestic uses it might be put to, and another decade will, no doubt, commercialize it generally.

The United States exported into Canada during the past year in Hardware, cutlery and edged tools over $1,338,000 worth, or about 79 per cent. of the entire import receipts. The percentage may reach a still greater figure during the current year, for more factors are looking for Canadian business. Great Britain is already outclassed, and under present conditions can not recoup any of the trade that now goes to the States.

An Ohio dealer arranges the text of his advertisements according to States. His last announcement embodied the lines of New York State manufacturers he carries, described thus: Albany Stoves and Ranges, Hoosick Falls Harvesting Machinery, Schenectady Electric Appliances, Seneca Falls Pumps, Peekskill Heaters, Cortland Wagons, Herkimer Office Desks, Poughkeepsie Horseshoes, Buffalo Railroad Supplies, Middletown Saws and Walden Cutlery.

I noted a peculiar mode of advertising in Cincinnati. In the lobby of the gas company's offices several types of ranges and stoves manufactured in Cincinnati are permanently exhibited. The walls are decorated with the advertising signs of Hardware dealers handling these. Of course, most of the specimens exhibited or referred to are gas fuel appliances. The idea is certainly worth a good many orders, and might be patterned after to advantage in other cities.

Especially active are, and promise to continue indefinitely, the demands for mining specialties and appliances. This is not only fact in the iron ore mines of the Northwest, but the mining districts embraced by West Virginia and Alabama. The new South is developing new institutions in addition, such as petroleum and lumber, not to mention the new industrial life which ruling cotton product, wool and tobacco prices have infused. These sources alone will guarantee 25 per cent. additional business during the year.

The delegates attendant upon the O. H. A. Convention at Cleveland will long remember the hospitable reception they received at the hands of the associate members of the trade. The Sherwin-Williams Co , always flagged for such occasions, made an especially favorable impression upon the visitors, and the company, no doubt, scored many a lasting advantage over its more conservative townsmen. But, "red paint" was nowhere in evidence, for it was a typical Rev. Sheldon crowd, not having any faith in the indiscriminate mixing of wine and iron.

A practical specialty often leads to great success. The manufacturing centers of Ohio teem with the exemplars to bear me out. In fact, Ohio first became famous through her Hardware specialties, and yet maintains an unrivalled position in the specialties now staples. But I have in mind F. E. Kohler & Co., of Canton—a plant which evolved from a single posthole digger and curry-comb specialties. And the opportunities for special manufactures are now larger than ever, though every phase of Hardware trade requirements and desiderata is so well covered there seems but room for positive improvements

In some trades, high prices have a tendency to increase the consumption. This was especially notable in the tinware industry, the can makers' several raises of late being always followed by an increased demand from all sources. On the whole, however, the ruling high prices have reduced consumption one-third or probably two-thirds as regards wire fencing. In the South, for instance, where water pipe is largely used in windmill and similar construction work, the high prices have reduced the demand to practically nil. In the aggregate volume of business, these discrepancies escape notice, and since profits have been generally satisfactory—especially to combine factors—these consumptive shortages are practically ignored.

The past year was the record-breaker of the Great Lakes navigation interests, involving greater tonnage and profits to vesselmen than conditions warranted. And then the season closed with an additional 40 per cent. of business on

Digitized by Google

the docks, in warehouses and on the rail to be forwarded. The season of 1900 opens, therefore, with a rush, and the new tonnage offering and in sight will insure an immense total. The Cleveland Hardware interests and, in fact, all the principal shippers from Buffalo to Duluth, gauge this outlook to mean a probable 25 per cent. volume increase during the present season. Mining, lumber business, ship chandlers and sporting goods, and general farm staples, will likely represent the bulk of this increase, but it is generally predicted there will be formidable movements to the Northwest of builders' Hardware and structural iron.

'Tis true, probably 75 per cent. of our manufacturers have orders enough in hand or in sight to pre-assure a six months' steady and busy run. Some of these have practically retired from active solicitation of business, relying solely upon market prognostications and the spontaneity of the demand, even going so far as to cancel all their advertising. These men will find themselves brought around with a sharp turn after the six months' guaranteed business has run out. There will be a cessation of over-activity just as soon as the producing sources have equalled the demand, and there will follow slump after slump, for the quota of rush orders will practically fall away. The canceling of advertising contracts and reduction of other expenses necessary to maintain the equilibrium of the demand is certainly a very shortsighted policy that may have serious effects.

The cheap rate and gratis excursions inaugurated by the Cleveland Chamber of Commerce for the benefit of country merchants and local manufacturers and jobbers, has probably attracted 15 per cent. of new trade that would otherwise have gone to travelers or to some other market. This enterprise is perfectly legitimate. The merchants' excursions, however, are creating havoc with country merchants and retaliatory measures are being suggested, such as boycotting certain travelers, etc. This would be foolish inasmuch as the country press could exert the influence necessary to wean the townspeople from the illusion that they are saving a lot of money by taking advantage of these shopping excursions. About a decade since, the Cincinnati merchants inaugurated like excursions, but Cincinnati is actually the mecca of thousands of country buyers who would have to go to Columbus, Louisville or Pittsburgh in order to cover many of their wants.

The Paris Exposition will be the opening wedge of American representation abroad. Many of the men going thither will combine business with pleasure, and probably remain abroad and establish themselves as manufacturers' agents. The prospects in Europe for such enterprise were never so bright. Of course, it will require about a year's time to become fully "orientalized," i. e. to become conversant with the wants and whims of the European trade. The average European will regard the "American interlopers" with a jealous, if not suspicious, eye at first, especially since some fool consular agent has allowed a report to get into print to the effect that Americans were flocking to Europe with a view to ascertain factory and mill secrets, but after being acclimated, the conditions will be found quite advantageous. Proficient knowledge of the native languages would, of course, be of invaluable service, and American manufacturers would do well to select representatives of some linguistic ability.

Cincinnati, Ohio. John B. Rindfleisch.

Caller—Is Mrs. Brown at home?

Bridget (new domestic)—Yes'm, she's home. But won't yer plase put yer tickets in me mouth?—me hands is wet!

The name of Wayne is the title or part of the title of more places in the United States than any other.

Big Copper Plant May Be Moved to Buffalo.

From a special to the *New York Commercial* it is learned that a syndicate has been formed in Buffalo, N. Y., to buy a controlling interest in the Randolph-Clowes Co., of Waterbury, Ct., one of the largest copper and brass manufacturing concerns in the country, and the plant will be moved to that city.

Charles H. Keep, Secretary of the Buffalo Merchants' Exchange, is one of those who have worked hard to bring the enterprise to Buffalo. He is reported to have said:

"Early last Autumn it was brought to the attention of the Buffalo Merchants' Exchange that the opportunity existed to purchase and remove to Buffalo the plant of the Randolph-Clowes Co. of Waterbury.

"The plant consists of one of the largest and best equipped seamless brass and copper tubing mills in the United States, also a sheet brass rolling mill, a copper sheet rolling mill, brass rod mill, brazed tube department, kitchen boiler department, department for the manufacture of plumbers' supplies, etc.

"Edmund Hayes, Franklin D. Locke and Maurice B. Patch, of the Buffalo Smelting Co., went to Waterbury and inspected the plant, acquiring valuable information concerning the business. Afterward, Mr. Albright, H. H. Hewitt, president of the Magnus Metal Co., and I went to Waterbury, and the necessary investigation was carried on actively under Mr. Albright's leadership.

"As a result, a syndicate had been formed in Buffalo to purchase a controlling interest in the Randolph-Clowes Co. and to provide the necessary additional capital to remove the brass and copper plant to Buffalo and to install it here in suitable buildings, with full modern equipment."

Asked what Buffalo men principally were interested in the syndicate, Mr. Keep said it was headed by John J. Albright, Edmund Hayes, George L. Williams and S. M. Clement. Among the other stockholders are George S. Field, William H. Hotchkiss, J. N. Adam, John J. McWilliams, Pascal P. Pratt, Franklin D. Locke, Joseph P. Dudley, Charles H. Keep, H. H. Hewitt and Edward W. Eames.

Origin of the Word "Trust."

The word "trust" was not applied to capitalistic combinations and monopolies until the Standard Oil Trust was formed, on January 2, 1882. By the agreement a majority of the certificates of stocks were placed in the hands of trustees, who took full charge of all of the oil refining corporations, partnerships and individual properties which went into the trust. The violent agitation which sprung up against trusts in 1887 and 1888 resulted in investigating committees, State and Federal anti-trust laws, and in slight changes in the forms and names of these and other combinations. Since then our greatest combinations are monopoly corporations, called companies instead of trusts, and are managed by directors instead of trustees. These companies own the plants and are therefore much more solid and permanent than were the original "trusts," in which only a majority of stock certificates of certain concerns was held. The present form is also more difficult to reach by law. Since 1887 the word "trust" has, by popular usage, if not by general consent, become generic and now covers any agreement, pool, combination or consolidation of two or more naturally competing concerns which results in a complete or partial monopoly in certain territory. It is, perhaps, fortunate that there should be a single word by which consumers can designate any monopoly combination with power to fix prices or rates; it may, however, be unfortunate that the word "trust," which has so many other legal meanings, should have been selected for this purpose.—*Review of Reviews.*

MY FIRST SALE "ON THE ROAD."

When in 1865, I had no sooner been permitted to sign the firm name with the characteristic flourish I had decided indicated dignity, than I became firmly convinced the proper thing for the junior partner to do was to lay out a route and add traveling for trade to his many other varied accomplishments.

You see I had been held back by the foxy partner I succeeded, and was given no opportunity to make an experimental trip, either nearby or far away, in order to show in my career how I could avail myself of the goodness of Dame Fortune, and demonstrate to those about me that I was worthy of the elevation to which an admiring and indulgent head of the firm had pushed me.

Then again, I was a little afraid the departing partner would "flim flam" some other Hardware house into believing he was a good salesman, and of commercial value, this was, I must confess, extremely questionable to those who had previously been associated with him. But a decision had to be made that if we were going to hold the fairly developed Western trade which, naturally at that time was a large asset in the good will of the business, it was important for me to try and ascertain for myself whether I was any good out on the firing line, my predecessor, before referred to, never having permitted me to wait upon any of the large buyers who made our house their Hardware headquarters when in the city.

In making up my itinerary I included a number of towns from which a mail order trade had been established, without having seen the men who pulled the wires to which we gladly responded; and there were also a number of places from which good buyers had strayed into our store, picking up odd lots of imported goods, and who had informed me that while their stocks were of general merchandise, their line of Hardware was usually purchased in some place nearer their town than New York. I was selected to act as the buying member of my own firm, and as is frequently the case, I had my own idea of the amount of stock it was desirable to carry in order to make all the profit possible and divide with nobody. I felt a trifle fresh and thought my predecessor had been too conservative in his views. The prices in the Spring had been favorably low, and my orders for Spring and Fall trade were more than usually liberal in consequence. I was confident, even with a fair demand, goods would stiffen in price, and events justified the conclusion thus arrived at. All the old stagers in business, within a few blocks of our location, and there were a number of them I found, were laying in light stocks, and business in those days—remember this was in 1865—was a good deal like buying a ticket in the Louisiana Lottery—you had to wait until the end of the trip to know if any dividends were in sight.

Well, being the buyer of the house, as I mentioned, I had to get everything all ordered up before I dared think of leaving my partners to buffet the tide of traffic alone for a term of six or seven weeks. Finally in the latter part of June, with a zinc trunk full of samples and a big Russell & Erwin Mfg. Co. ($25) Catalogue, all priced up, as well as it could be in those difficult days to obtain several thousand quotations, I bought a ticket as far as Chicago and started on my maiden trip.

Chicago was a good many hours further off than it is now, so I took the privilege of stopping off, which I did at a place called New Brighton, Pa., a short distance out of Pittsburgh. I had a customer there to whom I felt confident I could sell my first bill. The firm was named "C. U. Meyer & Co." I remember it well. I landed at the station in the evening, and the zinc trunk into which I had crowded all the plunder I thought essential for success, was so chunky and so solid, the Irish porter for the hotel at which I intended stopping, asked: "Murther! is it goold ye have in your zincograph?"

"No," I said very sanguinely, "not gold, but the making of it."

I remember that first hotel well; everything but the name. At supper I had hard work to get even a glass of milk, until I had sent for the aged clerk and told him I was willing to buy a cow, if necessary, in order to obtain it, and then he sent out and bought some, not cows, but milk.

When my trunk reached my room and I opened it for some nightly prerogatives, the moment the lid was lifted a suspicious aroma filled the air. In packing my "duds" I had used the top compartment of the trunk to pack in a fair stock of linen and other supplies, when, fearing in some localities I visited I might find a brand of water the healthful quality of which could not be vouched for by the local board of health, I had deliberately and snugly tucked away between the large supply of the aforesaid linen a bottle of Hostetter's Bitters. Before the large audience I am now confiding in I want to be conscientious in my recollections, and even at this late day I am willing to make affidavit that it was the square shape of the bottle that made me decide in its favor when I selected this microbe destroyer.

Well, the aroma was unmistakable. Upon investigation my worst fears were realized—that miserably-made bottle had played me a low-down trick and "busted on me." Not a drink did I have for a dividend, and every piece of wearing apparel in the compartment had to go in the wash at once in order to get them the next day.

How well I remember that item in my hotel bill, "Laundry, $2.40." I wanted to do the square thing in my expense account, so I didn't charge up the bitters, but the laundry bill as rendered—well, that "stood pat."

I saw my customers in the morning. The junior partner was a Mr. Smith, unfortunately quite lame, but an old-time gentleman in his characteristics. Mr. Meyer looked after the mechanical part of the business—the tin shop, etc.—and Mr. Smith ordered the goods.

They gave me an order amounting to nearly $400, which at once came near making my hat a size too small for my head. In connection with that bill I remember a blunder I made undetected, which materially lessened the profits. How easy it is to remember our blunders, especially the unprofitable sort!

Screws at that time were, I think, sold at a list price, from which the regular discount would be 40 to 40 and 7½ per cent. for a close price. I found they were buying in Pittsburgh, or had been, at 30 and 10, and as they had all their costs of every size figured at that price I gave them net prices at 40 per cent., which by comparison seemed low, saying nothing at all about discount. When I sent the order in, to make it easy for the entry clerk, as I had put all the prices in my order book, I placed these net prices over the sizes; and then, oh, strange fatality—no Hostetter's Bitters in this—I also placed 40 per cent. in the discount line. Who could believe that such a stupid bull as this could pass undetected, but it did, and the bill clerk rushed off the heart-breaking invoice charged in that fashion.

It was only when I returned from my trip, that in look-

Digitized by Google

ing over the business of the past, I discovered it. Of course, as any self-respecting salesman naturally would do, although it was six weeks old, I notified Meyer & Co. of the error of the entry desk, explaining how they had been given an unearned dividend, and of course enclosing a "corrected bill." I smile at this very moment in remembering their extremely ingenuous reply. "They were indeed doubly sorry; they had noticed the price was 40 per cent. lower than I had quoted, and 40 and 5 per cent. lower than in Pittsburgh; but they thought that a big drop had taken place in prices, and had conscientiously marked all their selling prices down to meet it, in fear of a competitor, and were actually and kindly saving all their screw orders for us to fill, for being so honest with them." Well, well! I hadn't a word to say; but as an old sport would remark to-day, there was no doubt that I was "it."

Qualified Men For the Foreign Trade Service.

One of the weak points in the equipment of American industries for export trade was brought out at a recent session of the International Commercial Congress, when the subject of commercial education was discussed. Very little attention comparatively speaking, has been given in this country to the special instruction of young men for foreign trade service, whereas, in the leading European countries, many schools have been established where young men are specially prepared for business careers abroad.

The course of instruction in these schools includes international law, commercial law, treaties and the tariffs of different countries, and the modern languages.

The value of such varied and thorough instruction on international educational lines was pointed out very clearly in the course of the discussion by President Eliot of Harvard College. Instancing the international demands of many industries and trades, he said that year by year as ocean carriage becomes surer and quicker, and as business is done more and more all over the world by telegraph and telephone, the individual merchant's need of overcoming obstructions to commerce caused by variety of languages becomes more and more pressing.

For the calling of a correspondent, traveling or stationary, for the commercial press, previous special scholastic preparation was obviously required. Similarly, there is every reason why consulships and the managements of the intelligence departments of trade organizations, should be filled by men having a thorough understanding of commercial conditions and more or less linguistic skill, as well as of considerable natural ability.

American shortcomings in this respect are notorious, and contrast sharply with our conceded superiority in many of the essentials to successful foreign trading. Our material resources, notably in respect of metallic and other minerals, forestry products, and of soils suited to the production of the more important crops, are admittedly unequalled. Likewise, the mechanical equipment of our industries and the inventive talent of our people are beyond compare. Finally, our business methods are, on the whole, in advance of those of other industrial nations, largely because we have a proper conception of the value of time.

Unlike his slower-moving European competitor, the American manufacturer assumes that time is money, and acting upon this assumption, he employs the latest and most improved machines and implements; speeds his machines to turn out the greatest possible amount of work, and employs the best men money can secure to operate them. The superiority of the American manufacturer's methods has been lately shown in the case of a large order for passenger locomotives received from the Russian government by the Baldwin Locomotive Works, and in the case of an order for four locomotives for the Egyptian railroad, which were guaranteed by the same firm in eight weeks, and shipped thirty-three days from the time the order was placed. A still more conspicuous example of American speed and enterprise is furnished in the case of the Atbara bridge, which was completed and erected in Central Egypt by the Pencoyd Iron Works in six months and eighteen days from the time the order was placed, though no English builder would undertake to complete it within two years. Another notable circumstance in connection with the bridge is the fact that the lowest English bid for the bridge was $67,750, while that of the Pencoyd Iron Works was reported to be $31,000.

With all these advantages in their favor for doing business abroad, American exporting interests will more and more keenly feel the necessity of having specially qualified men for the foreign branch of their trade operations; and our colleges ought to be in a position to furnish them in the course of a few years, even at the expense of reducing the output of football players and oarsmen.—*Age of Steel.*

Coates Hand Power Clipping Magazine.

The Coates Clipper Manufacturing Company have on page 88 in this issue of our paper illustrated their latest hand power clipping machines numbers 429 and 529. The number 429 is said to be the only low-priced gearless machine on the market. It is furnished with Coates' all-steel flexible shaft and patent quarter turn, a powerful combination. It embodies many new and novel features. The price of this machine with one head and two sets of cutters is $20.

The number 529 is an extremely popular, low-priced clipper. It received the highest award with medal at the Philadelphia Exposition. This machine weighs only 35 pounds. It is furnished with one head and two sets of cutters for $15.

The Company are also manufacturers of Coates' famous Duplex Tension Barbers' clippers, which have been so popular among the barbers for the last three seasons.

All dealers handling these goods should send for catalogue and prices to the home office, No. 237 Chandler Street, Worcester, Mass., or their New York office, No. 93 Chambers Street.

Wonderful Railroad Facts.

The latest obtainable statistics show that there are 240,000 miles of railroad tracks in the United States, that 35,950 locomotives are in use, drawing 1,297,649 cars, carrying 511,772,737 passengers and 765,891,385 tons of freight at a cost of 4-5 cent per ton per mile for freight. The gross receipts of all the railroads up to date were $1,150,169,376. There were upon the pay-rolls of the different roads 826,620 employees.

Employed in different manufacturing, supplies, construction and equipment concerns there are more than 2,000,000 men, and on that number depend over 10,000,000 people for support.

Thus, one out of seven of the population of the United States is supported by the railway industry. The total cost of all the railroads in the United States is estimated at $10,566,865,771, or about one-fifth of the wealth of the country.—*American Exporter.*

"Mamma, where shall I take this broken breastpin to be mended? To Glasspy's?"

"Not at all, child. Mr. Glasspy has done two or three little 'thank you' jobs for us lately. He'd tack on the price this time. Take it to Mugger's."—*Ex.*

Making money ought to be the exclusive right of the mint. After it's made, let us earn it.

The tool business is good, exclusive of ice tools. They're in season.

The Foreign Trade in American Machine Tools.

The progress made by the United States in the export of manufactures of iron and steel during the past three years is, in general, of common knowledge. Of all branches of this trade the most significant is that of the export movement in machine tools. This has received but little attention in the daily press, because it is statistically overshadowed by others, and especially because it has few spectacular features such as large individual transactions. Its importance is, however, far in excess of the attention it receives, and this paper is, primarily, an attempt to show why it is so important, as well as how important it is.

The statistics of the Treasury Department show the exports of this class of machinery during the year 1899 to have been at the rate of $6,500,000 per annum in value, which trade has been practically created during the past three years. The figures named show a growth of nearly $1,000,000 over 1898; they are 25 per cent. in excess of the value of locomotives, and 70 per cent. in excess of the value of electrical machinery exported during the same period. Moreover, the government figures understate the facts. Owing chiefly to the fact that exporters are not compelled to manifest their goods under the Government classification numerous errors creep in, which are always such as to reduce the figures belonging to this class. It is believed by well informed observers that the total export movement is in the vicinity of $10,000,000 in value per annum.

The statement that this is the most significant of all branches of our new foreign trade, and this without regard to its statistical position, is based on several facts:

First.—Machine tools are representative of all that is best in machine manufacture. The highest skill in design and the greatest perfection of workmanship to be found in any commercial machine are embodied in them.

Second.—The art of machine tool-making is one of the few fundamental arts on which all modern industries of whatever kind depend. All finished manufactures of iron and steel are made directly by these machines, and industries of whatever kind in which machinery is used depend on machine tools for the production of that machinery. The railroad and steam navigation, for example, are but children of the machine tool, while few other industries are more than twice removed. The printer's art has been revolutionized a dozen times by the machinist.

Machine tools are at once the means and the product of industry. They are the means because by their aid all machinery is constructed, and they are a product because they are themselves built as an article of commerce.

As the product they represent the work of the best brains and the most skillful hands, and as the means they represent the productive methods characteristic of the country of their origin. The country which produces the best machines of this class is by that fact alone the leading country of the world so far as methods of production are concerned, and it will be seen from this that the purchase of machinery of this character by distant nations is at once an indorsement of both our products and our methods.

These machines range from small, light affairs of the most refined and accurate workmanship up to massive constructions capable of operating upon pieces weighing many tons and consuming, perhaps, many days in a single operation. They also range from the most simple and elementary constructions, requiring constant manual supervision, up to highly organized constructions which are entirely automatic in action. These last turn out their product with no supervision whatever beyond that required to maintain the supply of raw material, and to occasionally sharpen and adjust the cutting tools, and seem sometimes almost to have absorbed some of the brains of their designers. There are few more interesting sights in all the field of productive industry than a factory floor filled with these automatic machines. Crowded together to the utmost, row upon row they stand, with a wilderness of driving belts descending from the ceiling. With here and there a stray attendant, busily they whirl. Each cutting tool advances in turn to its allotted task and quickly withdraws, to be followed by another, and another, and another. Some advance rapidly, some slowly; some in this direction, and some in that. The machine turns now in one direction and now in the opposite, now slowly, now quickly, and finally the completed work drops on, to be followed by the releasing and a movement forward of the bar of steel or brass, a gripping of the vise-like jaws, and a repetition of the entire process, the whole cycle being repeated, in extreme cases, perhaps a thousand times an hour.

It is true that such machines are less spectacular than a locomotive at speed or a steamship at sea. Fairly swimming in oil, and covered with what the scornful Philistine calls "dirt," they are not even pleasant to approach except in shop clothing, but of such is the kingdom of industry. In point of fact, such machines rank among the great achievements of the human mind.

One tenth of the merit embodied in these machines when shown in other fields of effort has placed men's names among the immortals, but the name of the inventor of the automatic screw machine is unhonored and unsung.

It is important to note that such machines are exclusively of American origin and development. Until this movement of American machinery abroad began, such tools were unknown outside of American shops.—F. A. HALSEY, in the *American Machinist*.

New Carnegie Co.'s Full List of Shareholders.

The Carnegie Co., which was incorporated March 24th, at Trenton, N. J., with a capital of $160,000,000, is composed of the following shareholders, the value of each share being $1000.

	Shares.
Andrew Carnegie, New York	86,379
Henry Phipps, Pittsburgh	17,226
H. C Frick, Pittsburgh	15,484
Charles M. Schwab, Braddock, Pa	18 020
Francis J. F. Lovejoy, Pittsburgh	7,024
Lawrence C. Phipps, Pittsburgh	2,653
William H. Singer, Allegheny	2,829
Thomas Morrison, Braddock	884
D. M. Clemson, Pittsburgh	884
James Gaylor, Pittsburgh	884
Andrew M. Moreland, Pittsburgh	810
John Walker, Allegheny	703
Josiah Ogden Hoffman, Philadelphia	442
William W. Blackburn, Pittsburgh	442
George E McCague, Pittsburgh	442
James Scott, Pittsburgh	442
William E. Cores, Munhall, Pa	442
Joseph E Schwab, Duquesne, Pa	442
Charles Lynch, Greensburg	326
Henry L. Rope, Pittsburgh	295
Lewis T. Brown, Pittsburgh	295
G. B. Bosorth Pittsburgh	147
David G. Kerr, Pittsburgh	147
J. Lindsay, Pittsburgh	147
H. E. Tener, Jr., Pittsburgh	147
George Degrew, Pittsburgh	147
Gibson D Packer, Pittsburgh	147
William P. Dickson, Pittsburgh	147
Charles W. Riker, New York	147
Sylvanus L. Schoonmark, Plainfield, N. J	95
Azor B. Vant, Munhall, Pa	74
Thomas P. Toestenberg, Munhall, Pa	74
Alva C. Dinkey, Munhall, Pa	74
Charles McCreary, Duquesne	74
Charles W. Baker, Duquesne	74

The company is authorized to promote, construct, provide, acquire, carry cut, maintain, manage and develope on lease or agreement, railroads, pipe lines, quays, wharves, docks, hydraulic works, gas works, gas wells, mills, dwellings for employees, and other works. The company has express power to acquire the existing Carnegie Co.

The State receives $32,000 fee for the incorporation, and the annual franchise tax will be $11,750.

Biggs: That man Dobbs is going around telling lies about you.

Boggs: I don't mind that, but if he begins to tell the truth I'll break his neck.

The man with the hoe has forked over his prerogatives to be raked in by mechanical genius.

One of the Ancient Landmarks of Boston.

In "Merrie England," an American business man is struck by the number of established manufacturers and business houses whose names and business descend for generations in the family of the founder. Hardware dealers need not be very old to know well certain English houses whose most precious possession next to the unvarying high standard of their product is the original name under which, a hundred or more years ago, the modest enterprise was started, which made itself felt all over the world.

In this country such a legacy of business actively coupled with a founder's name is rare, as might be expected where all is so new; and it is perhaps quite as rare to find the same premises occupied year after year by the same business, through purchases of stock and good will by successive parties at greater or less intervals.

It is doubtful whether there is a more conspicuous example of that sort of business, dissociated with family descent, than in Boston. At least as early as 1796, which was as far as records can be consulted, one Joseph Scott, Jr., was in the Hardware business in the building now No. 20 Dock Square. That was the day of small things. Boston numbered scarcely more than 15,000 inhabitants. Of the buildings then existing scarcely any now remain. Faneuil Hall was there, but not the Faneuil Hall now known, which was built in 1805. The historic old State House was there, but its architectural shape was quite different from that it now bears. In place of the long granite Quincy market, for so many years and to this day justly the pride of Boston, were arms of Boston harbor, so that the bowsprits of vessels overhung the street directly in front of Faneuil Hall. The old Hancock Tavern, in whose quaint rooms the famous members of the Tea Party donned their Indian disguises, and went forth for the destruction of the tea in Boston Harbor, is within a few rods of this store. During the time when Washington was still the President of the country, and a few years later in 1800 before the close of the John Adams administration, the records show that the Hardware business was still carried on at this place, but the proprietorship had changed, and the business was now conducted by John Odin. Through all the trials of the earlier years of this century, of the embargo which must have been so hard to bear in a New England seaport, and the vicissitudes of the war of 1812, up to more prosperous days, the business appears to have been actively carried on, for in 1825 the records show, John Odin still to have been there engaged in the Hardware business.

In 1829, after a continuous record of 29 years, John Odin was succeeded by T. W. Haskins & Co. and Judge & Vinal, through short terms of business life. In 1842 Otis Vinal became proprietor of the business, in which he was markedly successful for eighteen years. Failing health forced him to relinquish the active participation in affairs, and in 1860 he disposed of the stock and good will of the business to Messrs Burditt & Williams, whose fortune it has been to more than round out the century of the old store in the Hardware business. Their term of proprietorship has far outrun that of any of their predecessors, so that they can now look back upon a business career there which has just completed forty years.

It is not to be supposed that an active house could exist and grow without extending the confines of its original premises. By several additions of neighboring stores the area used by them far exceeds that of the early years and outside room is called in requisition. But the original spot, hallowed in the eyes of a Hardwareman who possesses any sentiment by so many years of activity and change, is still the central core of their business habitation. And although the particular line is in builders' Hardware, and somewhat local, they have of late years become widely known to the general Hardware trade of the country through their introduction and supply of the Marty rat trap of which they are still sole importers.

This is a country of frequent changes. The future of business location can perhaps be less easily predicted in a city of the United States than in any other country. Therefore this record of continued successful and increasing business activity in one location in a great and growing American city, seems sufficiently unusual to merit a passing chronicle; at least so thought the friends and customers of Burditt & Williams on Monday, April 2, when they gathered in large numbers at the old store to felicitate the firm on the fortieth anniversary of the foundation of the firm.

In this connection we give the form of the original announcement:

COPARTNERSHIP NOTICE.

The subscribers have this day formed a Copartnership under the name of

BURDITT & WILLIAMS,

and having purchased the stock of Mr Otis Vinal, will continue the Hardware Business at the old stand No. 20 Dock Square and 30 Faneuil Hall Square.

CHARLES A. BURDITT,
JOSEPH WILLIAMS.

BOSTON, April 2, 1860.

NOTICE.

The undersigned having disposed of his Stock of Hard Ware to Messrs. Burditt & Williams, solicits, for his successors, the patronage heretofore bestowed upon him.

OTIS VINAL.

BOSTON, April 2, 1860.

The following is the

INVITATION TO THE FORTIETH ANNIVERSARY.

MESSRS. CHARLES A. BURDITT,
JOSEPH WILLIAMS,
JAMES A. MUNROE,
AND JOSEPH H. WILLIAMS
REQUEST THE PLEASURE OF YOUR COMPANY
AT THEIR ORIGINAL AND
PRESENT STORE,
NO. 20 DOCK SQUARE,
ON
MONDAY, APRIL 2, 1900,
THE
FORTIETH ANNIVERSARY
OF THE
ESTABLISHMENT OF THE FIRM OF
BURDITT & WILLIAMS.
12 TO 3 O'CLOCK.

During a reception which lasted through several hours the members of the firm were warmly congratulated on an event unprecedented in the business annals of the city. The original founders of the firm, Charles A. Burditt and Joseph Williams, were associated in the reception with James A. Munroe, who had been with the firm more than twenty-five years, and who became a partner in 1886; and Joseph H. Williams, lately admitted, who had been connected with them nineteen years. Beside the greetings of personal friends, customers, and business associates, the occasion was also made notable by the presence of the Mayor of the City and the chief officers of leading mercantile organizations of Boston.

"You are truly polite, Wickman; you gave that homely woman your seat in the street car."

"Well, she looked as though she was going to stick her hatpin in me if I didn't."—*Ex.*

RECENT TRADE PUBLICATIONS.

Sargent & Co., New Haven, Conn., and New York. 1900 catalogue of screen Hardware, forming a pamphlet catalogue 9x12 inches in size, covering 32 pages. A very seasonable and interesting catalogue for the Hardware dealer to receive at this time, covering as it does everything in Hardware necessary for making and putting together screen doors and window screens, for opening and closing them properly, and for keeping them shut when desired. The contents are fully illustrated and described throughout, list prices being given to which the usual trade discounts apply, a discount sheet of the same accompanying the catalogue. Among the goods referred to are screen-door checks, door springs in all varieties, surface spring hinges, mortise and hold-back hinges, loose pin butts, screen-door catches in large variety, screen-door night catches, brackets, window spring bolts, window-screen pulls, sash lifts and door pulls in great variety, steel-wire door pulls, gate hooks and eyes, porcelain and bronze shutter knobs, and square neck and chain bolts. It may readily be seen how useful a combination of this kind is to a Hardware dealer when ordering supplies.

Millers Falls Co., No. 28 Warren Street, New York, and Millers Falls, Mass.; 1900 catalogue of the tools and light machinery manufactured by this well-known concern. Pamphlet catalogue of seventy-eight pages, the finest they have ever issued, being handsomely printed on excellent paper. and completely illustrated throughout. Full descriptions are given of all the specialties, representing as they do, a line of goods that have been before the Hardware trade for a number of years, which includes Barber's braces, bit stocks and bit holders, extension screw drivers, Pratt's auger handles in all varieties; hand drills and ratchet drills, breast drills, vise and drill with and without anvil; automatic boring tools and screw drivers, ratchet screw drivers and bit gauges, and a full line of their popular specialties, the "Star" hack, butcher and kitchen saw. They also manufacture largely the Star power saw, which has had an extended sale throughout all large factories where work of this description is necessary. Included in the assortment of goods represented in this catalogue are the Goodell lathes and saw attachments, the Lester, Star, and New Rogers scroll saws, and a large variety of chucks, levels, glass cutters, etc., which are known as Millers Falls products the world over.

Van Wagoner & Williams Hardware Co., Cleveland, Ohio, and No. 14 Warren Street, New York. Catalogue for 1900 of specialties manufactured by this company, consisting of spring hinges, door springs, wire coat and hat and ceiling hooks, joist hangers, solid box and bench vises and Samson anvils. This is a good size pamphlet catalogue of fifty-two pages, covering this desirable line of goods and well known throughout the Hardware trade. This latest catalogue of theirs is the handsomest typographically that they have ever issued, illustrated on every page with good cuts of their various products, with price lists and descriptions throughout that are easily understood, in all the various finishes in which they are made. Illustrations are given in connection with the catalogue of the extensive plant now in operation by this company in Cleveland, showing the view of it from different points, and the interior of the same, including the forge shop, and the second floor of the main building. Few manufacturers of similar goods have such superior facilities. This is a catalogue that no Hardwareman should be without.

Brass Goods Mfg. Co., Nos. 86–92 Third Street, Brooklyn, N Y. 1900 catalogue of the brass and bronze Hardware manufactured by this old established concern. The catalogue consists of 150 pages, 6½ x 10 inches, printed on good paper, fully illustrated throughout, and covering a remarkably large line of brass and bronze specialties suitable for distribution throughout the Hardware trade, and of interest to manufacturers, for whom a number of special patterns and designs are made by this company, their line including as it does builders' Hardware, cabinet Hardware, refrigerator Hardware, and chest and box trimmings. Among its contents will be found box hinges, paper-file and strap hinges, side and quadrant stop hinges, mirror, card-table and support hinges, fancy hinges, showcase and seat hinges, cabinet, flap and refrigerator hinges. These are shown in a bewildering variety, forming the most complete and extensive assortment in all probability embraced within the covers of a catalogue, making this volume a very desirable one to add to the Hardwareman's outfit. Included in the assortment of goods also represented are refrigerator locks in large variety, spring catches, box pulls, door pulls and wardrobe hooks, coat and hat and ceiling hooks, knobs, card holders, pulleys, brackets, screw rings, etc.; a large variety of ornamental corners and hasps and staples, and in the line of builders' Hardware push plates, door knobs, combined rose and escutcheon, and a large variety of plate escutcheons are shown. This is the most important catalogue this company has ever issued, and is deserving of special mention.

R. Bliss Mfg. Co., Main and Garden Streets, Pawtucket, R. I. Pamphlet price list and illustrated catalogue of twenty-eight pages, compiled under the supervision of N. H. Colwell, the general manager, and includes their full line of wood Hardware specialties, which are and have been for many years the most complete on the market. Included in this line may be mentioned hand and bench screws, cabinet and pianoforte makers' clamps, chisel, brad awl, auger and file handles, hickory and lignum vitae carpenters' mallets, carvers' mallets, ring mallets, bookbinder's presses and plows, sewing benches, brass and iron founders' flask clamps, belt clamps, mill supplies in wood, tool chests of every description, field croquet and miscellaneous goods generally, especially in the wood-turning line. In the catalogue one page is devoted to giving the weights of hand screws and other screws of their make when packed for shipping. This is a feature that is desirable to have in every catalogue regarding goods, the bulk of which is largely out of proportion to the weight. Another feature noticed is that every line in the catalogue on all their regular goods has an arbitrary number, and this is given not only at the commencement of the line, but also at the end of the line in order to avoid error, which it would seem under such an arrangement would be impossible to occur. The cover of the catalogue is ornamented by a fine illustration of their works, which gives a good idea of the importance of their manufacturing facilities.

North Bros. Mfg. Co., Philadelphia, Pa. 1900 catalogue of ice-cream freezers, with which the name of this company has long been identified. This is a 24-page pamphlet catalogue, envelope size, very pretty cover, and printed in color, both cuts and text on a superior quality of tinted coated paper. It is a very neat and attractive catalogue, illustrated throughout with fine illustrations of their various specialties in this particular line, which in-

Digitized by Google

clude the "Lightning," "Gem" and "Blizzard" freezers in all the various sizes. In addition to this the large-size freezers for confectioners are noted, which, under the names of the "Crown" and "Lightning," with and without pulleys, are shown in great variety. They also show packing tubs and packing cans in all the various sizes demanded by the users, added to which a page is devoted to ice cream brick moulds and ice cream dishers. This is a handy, useful and important catalogue on this line of goods.

Ashtabula Tool Co., Ashtabula, Ohio. Pamphlet catalogue, twenty-eight pages, covering their line of "Diamond" rakes and hoes, finely printed in two colors on extra coated paper, illustrated throughout with half tones in addition to the cuts showing the line of goods. The product of this company is well illustrated throughout with good cuts, full descriptions giving list prices upon everything shown, and also the "code" word opposite the price, covering the article, which at the same time has its individual number, every line of goods in the catalogue being numbered for ordering purposes. This is a very carefully compiled catalogue, and shows care in the get-up. Its contents cover hay forks, two, three and four tine; header forks, three and four tine; also square-shouldered Utah and Montana pattern forks; barley forks; four, five and six tine manure forks of all the various patterns; spading forks in large variety, six-tine potato-digging forks, and potato and manure hooks. Their full line of hoes is represented, including garden hoes, mortar and street, ladies' and boys' hoes, and weeding hoes in large variety. Malleable iron and cast steel rakes are shown; also extra heavy road rakes. Included in the assortment are the Diamond barn, stone and tanners' forks, running from eight to fourteen tines, and with wide-strap ferrules; "Diamond" coke and coal forks are shown in large variety. Altogether this is an extremely desirable catalogue for the Hardware dealer, and should be included in his outfit.

Syracuse Chilled Plow Co., Syracuse, N. Y. Barrow and truck catalogue No. 9. Pamphlet catalogue of 48 pages in purple ink on coated paper, and profusely illustrated throughout with their line of barrows and trucks, which includes wood and steel wheelbarrows, contractors' plows, steel sewer buckets, track, road and wheel scrapers, steel skips, push carts, store and warehouse trucks, railroad and wharf trucks, and grocery and package trucks. It is rare for so large an assortment of these goods to be brought together within the covers of a single catalogue, and it makes this pamphlet a desirable one for purposes of reference. The frontispiece is a fine illustration of their extensive works, and the catalogue is claimed to cover the many additions and improvements recently made to their undoubtedly extended line. The steel skips and sewer buckets illustrated therein are largely used by contractors in various parts of the country, and have rarely been illustrated in such good shape.

Walter W. Woodruff & Sons, manufacturers of carriage Hardware, Mt. Carmel, Conn. Thirty-page supplement to their 1898 catalogue, in which they have included all their new goods, styles and improvements, covering their extended line of product, and calling attention to several additional lines that have been added by the purchase of the business formerly carried on by F. V. Wooster at Boston, Mass. Many of these are of special interest to the carriage Hardware trade, while the general Hardware trade will also be interested in malleable axe wedges and Dolber's outside or storm window fasteners, which will be found therein illustrated. The catalogue is nicely printed on good paper.

Reed Mfg. Co., Erie, Pa.; 1900 catalogue and price list of plumbing, steam fitting and Hardware specialties. Small size pamphlet catalogue of twenty-four pages, finely illustrated and well printed on superior paper. Among its contents will be found sectional-jaw pipe vises; Standard pipe wrenches, Tiger pipe wrenches, Reed's special wrench for steel rods, studs and bolts; Standard roller pipe cutters, pipe stocks and dies, combination tool sets, combination pipe vises, emery wheel dressers, beam clamps and pipe hangers, etc. This is a very desirable little catalogue covering a line of goods with the name of which the trade has been familiar for some time.

Kinnear Mfg. Co., Columbus, Ohio. Catalogue H, which is of thirty-six pages, handsomely illustrated by half-tones and wood-cuts, printed on superior coated paper, oblong in form, 7 x 11 inches in size. This is a very attractive catalogue of their product, consisting of steel rolling doors, shutters and partitions for office buildings, freight houses, round houses, ocean piers, warehouses, store buildings, churches and school buildings; in fact, every building where fire protection is an essential feature. These goods are all manufactured under a number of patents controlled by this company, and the illustrations given throughout are of the most comprehensive character, not only showing in full detail the method of application, but also the appearance of the buildings, warehouses, etc., when these doors and shutters are properly applied. A gold embossed cover adds to its attractive appearance, and it is well worthy of attention by those to whom specifications for such goods are apt to come.

Mast, Foos & Co., Springfield, Ohio. Pamphlet catalogue of 174 pages, covering their extremely large line of goods, among which are enumerated the Buckeye force and lift pumps, Imperial galvanized windmills, iron turbine wind engines, Imperial power steel windmills, galvanized steel windmill derricks, and included in the large variety of goods made by this well-known concern will be found the Mascot, New Buckeye and Buckeye Steel High-Wheel Lawn Mowers, together with Buckeye iron fence, cresting, etc., in large variety.

American Screw Co., Providence, R. I. 1900 catalogue of their well-known products, making a 32-page pamphlet catalogue, giving illustrations throughout on all their lines of manufacture, which include screws in every variety, machine screws, stove bolts, stove rods, screw taps, tire bolts, iron rivets in all varieties, tapped nuts and hand-rail screws. Included in the assortment are also to be found the lists of miscellaneous wire nails and the extras on all the standard steel-wire nails. It is a very valuable catalogue for pricing-up purposes.

Gurney Refrigerator Co., Fond du Lac, Wis. Pamphlet catalogue No. 10, covering their line of Gurney refrigerators, which includes in the assortment domestic refrigerators, grocers' boxes, refrigerator sideboards, ice chests, cooling rooms, water coolers, etc. This is a pamphlet catalogue of 58 pages, nicely printed on good paper, and handsomely illustrated throughout. The goods manufactured by this company are shown in all their different varieties, full descriptions being given of the difference between the various grades.

For Loose Nuts.

It is very annoying to find that the nuts of bolts occasionally shake loose from no conceivable reason. In such cases the nut should be removed and thoroughly cleaned; also the bolt to which it belongs. A little powdered resin should be sprinkled inside the nut and on the worm, and in addition to this, where necessary, a piece of ordinary cotton thread also bound round the worm; the nut and bolt will then be found to firmly hold.

The largest steel works are in Pittsburgh.

AN ETHICAL SURVEY OF "THE DRUMMER."

Now I have no intention of reflecting disrespectfully upon that highly esteemed class of men called in the vernacular "drummers," but known among their admirers as "commercial travelers," and classified among themselves as "traveling bag tourists," "missionaries," "guerrillas," and "commercial travelers," in a natural progression of excellence admitted and recognized. There is a radical distinction and perceptive difference between the several divisions, for they all represent nearly successive stages.

During the first year, when a young man travels for his employer's ostensible advantage and positive expense, from the very nature of the scenes he passes through, and also from the lack of that peculiar faculty only obtained from successful experience, and frequently denominated "cheek," our young friend above referred to, is very apt to become simply a "traveling bag tourist." That is, without selling a dollar's worth of goods to remunerate his employer for his liberal outfit, he still possesses the chance of seeing everything worth seeing in the various places he visits, and being at the expense of the house—"the dignity and respectability of which must always be kept up you know!"—he somehow sells but few goods "on the road," and is fully satisfied with the promises merchants constantly make, to get rid of the fear of being talked to death; and so full of hope, and confident (thro' his own flow of "gab") of selling every man he has called upon—when the next regular season approaches, he plods along spending his six to seven dollars a day and sending home nothing in the shape of orders in return; until his disgusted employers telegraph him to "cut it short," meaning his trip, and possibly hint that trade promises in his career but small returns for the outlay. Then is this specimen known and labelled by the travelling fraternity as a "traveling bag tourist."

A "missionary" in the road parlance of "the boys," is the man—he is generally a middle-aged man—who has been brought up and tenderly nurtured to some other kind of business than the one in which we find him; but who thinks he can learn (?) the one he is at present attached to, in a month at least. He never saw any business he couldn't learn in a month or six weeks.

Some of these middle-aged fellows who have been in fourteen kinds of business and know little of any of them, are fearfully and wonderfully clever—at least they think so, which is near enough. So, as this especial representative only travels to "get his trade together," and being noticably deficient in the vim and moral force of a man who makes in his mind a life's vocation of his business, he goes from town to town, calling at every store in his line of business, distributing his commercial tracts, his best quotations, his closest prices and most seductive baits, all of which are carefully collected by the sharp merchant, who takes them to be used upon his "regular" traveler when he happens to come along. Well, as the genial old gent goes along doing good to the general buying public at every step, and doing all this great amount of good at his own expense, he is fitly denominated by the craft at large as a veritable "missionary."

The second or third year generally tells on both of these classes of men; for by that period all the "lunkheads" have discovered that they lack the recognized capacity, or have insufficiently developed the "wide awake" faculty in their composition, to make successful salesmen capable of traveling to advantage; so they fall by the wayside, and dropping out of the race leave the quick, smart, clever and industrious ones to continue the occupation. Then a man who is compelled to pursue this course of life for his bread and butter either develops into a full fledged "guerrilla," or else graduates as an accomplished and honorable "commercial traveller."

He of the first named description (and he rarely changes his original plan), expects to see a dealer but once, at which time he "scoops him out as clean as a whistle," tells the most unnecessary lies, and exacts the most villanous profits and commissions that he can possibly extract from his victim's credulity or self-admitted inexperience. Having, no doubt, an arrangement with some unscrupulous employer, whereby he doubtless gets one-third of the profits made, by agreeing to pay one-third of the losses; and as he invariably designs travelling over a different section of the country every year, and the States now furnish an unusually large field for his operations, he has no expectation of being in the same place twice, so he gobbles up everything that comes along, all being fish that comes to his net; "goes for" passes over the various routes of travel on one pretext or another, "chins" it to the stage drivers in far off places, and frequently beats them out of their accustomed fare, only to boast of his nefarious ability at the next stopping place; smokes and drinks with any of his forbearing fellow passengers, without the faintest attempt at reciprocation, and never refuses an invitation from a certain or possible customer to take a drink, cigar or meal, or even a "shakedown" under his friendly rooftree, because it cuts down his daily expenses and places something on the profit side of his daily expense account. In fact he lies around a town boring the merchants to their desired demise, until he probably succeeds in taking an order for something, either nearly or remotely connected with his legitimate business, and which they are blackmailed into giving to him really to get rid of him, but he assumes it as a reward for his unfailing pertinacity; and thus in this characteristic fashion he receives the deserved title of "guerrilla," and fully earns the expressive appellation, for this mendacious class do more damage to the respectable and gentlemanly profession of "commercial travelling," than a regular guerrilla through his piratical and unrighteous practices does to the—in all ages—highly respected canons of a systematic condition of warfare.

When an intelligent man graduates, as I observed before, into a companionable and cultivated commercial traveler, one who must take a pride in his profession in order to make his mark, and who cannot degenerate into blackguardism and guerriliaism; one who is constantly sustaining the fair fame of his chosen vocation, by having it currently said of him, "his word is always to be depended on"; you will behold in him as fine a specimen of developed manhood as it is possible to discover between Casco Bay and the Rocky Mountains.

It is well worth the closest attention to hear him detail his constantly interesting experiences, and listen to him describe his varied and graphic adventures—"his moving accidents by flood and field," recounting the cultivating impressions made upon his receptive mind by the great and infinite variety of pleasing scenes through which he has passed; and hear him do all this without once sinking his manhood or defacing by a single stigma the image of his creator.

I would urge upon merchants far away from the fitful glare of a city's dissipation the positive advantages that

Digitized by Google

cannot but result from contact with such idealized exponents of commercial probity and business capacity. Wherever his footsteps wend a second time there should always be extended toward him a hearty and fraternal welcome by all within whose souls the flavor of pure appreciation does not lie dormant.

Always able to take his own share of responsibility, equal to any emergency, any sudden change in the current of commercial activity finds him prepared for possible emolument to himself and the house he represents, and represents in the fullest sense of the word; by cool and cautious counsel, smoothing those rugged corners which will occasionally be found in the existence of every business man; giving sound advice and positive relief, by indulgence when desirable and mutually advantageous, and scoring with severity and discipline when necessary, he at last attains the grand position which is the unvarying aim of his dauntless life, the goal of his unquestioning ambition—a partnership in the house his steadfast integrity is sufficiently emblematical of. Eventually by steady gradations reaches from the foot to the head, and, doubtless, if he obtains his pecuniary rewards on earth, dies wealthy, a benefactor of his race, his early life having especially fitted him for all the later comforts he has been permitted to enjoy, and the harmony of his mind and serenity of his grateful heart are but finite rewards of a past, the tempting and engulfing trials of which in the inception of his early career are only known to those who have been through the fiery ordeal—the crucible of experience—and have escaped unscathed.

Annual Meeting of the Hardware Club.

In accordance with the requirements of the constitution, the annual meeting of the Hardware Club, of New York, was held at the club rooms, on Saturday, March 17, at 12 M.

The principal business was the election of five members of the board of governors, to serve for three years, or until March, 1903. At a previous meeting of the board, a committee of members of the club, not on the board of governors, were appointed to nominate five gentlemen to fill these vacancies. This committee was constituted as follows:

Thomas J. Atkins, Sargent & Co., chairman.
Frederick Topping, Topping Bros. Co.
Joseph A. Marsh, American News Co.
Lee Kohns, L. Straus & Sons.
Francis B. Griffiin, C. E. Jennings & Co.

These gentlemen met, and by a unanimous vote, recommended to the club the re-election of the five gentlemen whose terms had expired. They were as follows: Eugene Bissell, Thomas F. Keating, James H. Kennedy, J. Leonard Varick, and Richard R. Williams. All these gentlemen had been members of the board since the foundation of the club. Mr. Bissell was serving as chairman of the house committee; Mr. Keating, treasurer; Mr. Kennedy, secretary; Mr. Varick, a member of the house committee, and Mr. Williams, chairman of the library and art committee.

The meeting was called to order by President George Henry Sargent, who made a few brief remarks, congratulating the members of the club upon the present prosperous condition of the organization, the successful year that has passed, and the bright promise for the future.

The secretary, James H. Kennedy, then read the report of the nominating committee, as above given. The president appointed the following gentlemen as tellers:

Frederic E. Underhill, of Underhill, Clinch & Co.
William H. Cole, of Tower & Lyon.

A recess was then ordered, during which the members of the club were requested to cast their ballots.

At 1:30 P. M. the meeting was again called to order. The minutes of the annual meeting of 1899 were read, and the secretary reported the membership of the club on March 1, 1900, to be as follows:

Resident members, - - - - -	584
Non-resident members, - - - - -	127

Webster R. Walkley, chairman of the finance committee, made his report for the year, and Thomas F. Keating, treasurer, also made his for the same period. These showed the club to be in a flourishing financial condition.

The tellers then reported that the gentlemen above named had been unanimously elected, after which the meeting adjourned.

In accordance with the requirements of the constitution of the club, the board of governors met on Friday, March 23, and by unanimous vote re-elected the following gentlemen for the ensuing year:

President, George H. Sargent.
Vice-president, Edward C. Van Glahn.
Treasurer, Thomas F. Keating.
Secretary, James H. Kennedy.

Heller Brothers Company.

The business of this company, which has been established since 1836, was incorporated in 1899, under the State laws of New Jersey. It is run as a close corporation, the management being in the same hands as before incorporation. They have greatly increased their manufacturing facili-ties during the past twelve months for increasing the production of their grade of steel, which is tempered by a peculiar process original with this company, the erection of a new 24-pot clay crucible steel gas furnace enabling them in this way to make provision for the increasing orders for their popular product, especially the Horse Rasps and Farrier's Tools which have been in such great demand for many seasons, and which are so favorably regarded by the Hardware trade, to whom the accompanying trademark is very familiar. They have also found it necessary to erect a large addition to their tool works, having installed therein several new patented machines of their own unique construction. Among other new machines recently added to their manufacturing facilities, they have installed in their horse rasp and file department, new forging, grinding and cutting machines, giving them great confidence that in the future prompter shipments may be assured not only in their domestic sales but also in the large shipments made abroad.

To Remove the Enamel.

Current practice in the matter of removing the enamel from bicycle frames preparatory to re-enameling differs widely. Where many frames are so treated, and, in consequence, the proper facilities are at hand, a good method is to boil the frame in a tank containing a solution of concentrated lye. Keep it in the bath for about twenty minutes. If it is not convenient to put the frame in such a bath, boil the lye and apply hot with a brush. Polish then with emery cloth.

In many factories and repair shops they disapprove of any kind of dips or solutions for removing enamel, and they take off the coating first, roughly, with a scraper, or an old knife even, and then use emery cloth and polishing bobs to clear off the remainder.

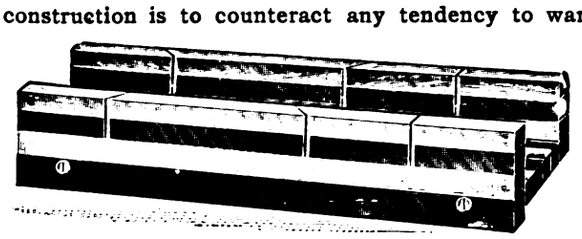
NEW GOODS AND SPECIALTIES.

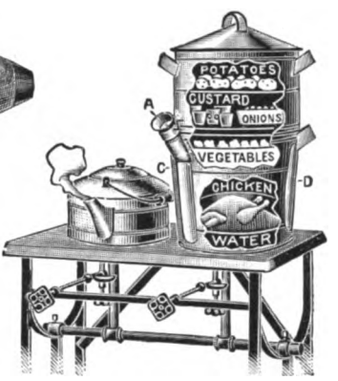
Triumph Wrench.



American Saw Company, Trenton, N. J., for whom Alder & Boyd, No. 37 Warren Street, New York, are export representatives, are manufacturing the Triumph Wrench, here illustrated, which is now provided with a wood handle, in addition to the all iron handle previously placed upon the market, so that buyers now can have the option

of either style. The main body of the wrench is hollow throughout its entire length, into which the threaded shank of the movable jaw is inserted. The back and forward walls are far enough apart to allow to the rear end of the threaded shank a limited rocking movement, so that when sufficient power is supplied to the handle it causes the jaws to move toward each other, thereby gripping the pipe firmly, while a backward movement of the handle will at once release the grip. The jaws are made of cast steel, polished and tempered. The thread upon the shank of the movable jaw is smooth and of such shape that stripping is said to be impossible. The nuts are of soft steel neatly knurled and case hardened. The wrenches are made with or without inserted jaw. All the parts are neatly finished and polished. The company in enumerating some of the many advantages of the Triumph Wrench say it never loses its grip, will not crush the pipe and never locks upon the pipe. It is made in the entire range of sizes, 6, 8, 10, 14, 18, 24, 36 and 48 inch sizes, and can be used either as an ordinary monkey wrench or pipe wrench.

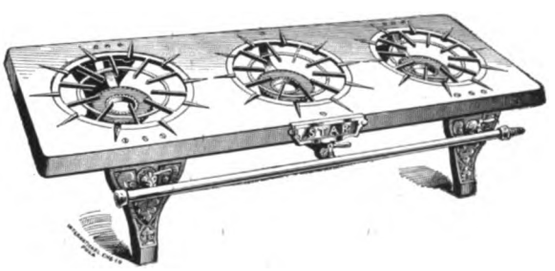
Hard Wood Miter Boxes.



C. E. Jennings & Co., No. 101 Reade Street, New York, are meeting a demand existing in the Hardware trade for a superior hard wood miter box, such as is here shown. It is made of alternate strips of black walnut and beech or cherry glued together, which while making this an attractive and salable miter box, the chief object of this method of construction is to counteract any tendency to warp,

thus keeping the angles true for accurate work. They are made in three sizes—viz.: 12, 18 and 24 inches in length, the widths being 2¾, 3½ and 4¼ inches respectively. The two smaller sizes are placed on the market packed one dozen in a box, and the largest size in half-dozens. They also make a line of the lower-priced plain hard-wood miter boxes.

The Ideal Cooker.

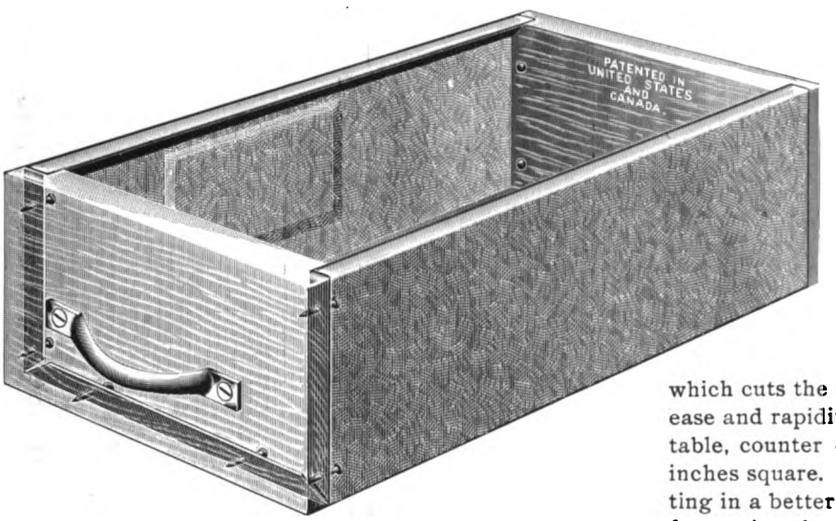


The Toledo Cooker Co., Toledo, Ohio, have recently perfected a steam cooker which is regarded by the trade as being the ideal steam cooker now on the market. Few more desirable appliances can be added to the culinary demands of the kitchen than an article which, like this, can eliminate almost entirely the many odors filling the house emanating from the kitchen department. Among its many desirable features may be mentioned the following: The cooker keeps all the steam and smell of all kinds of cooking out of the house; an entire meal, although consisting of five or six different kinds of food, may be cooked in it

at the same time over a single burner of any stove and with any kind of fuel which will produce enough heat to boil two quarts of water; it has a steam whistle, which may be heard all over the house, and which gives warning fifteen to twenty minutes before the water is exhausted; this whistle is also used as a tube to replenish the water when needed, and it has a self-regulating safety valve and an escape steam tube This ideal cooker is made of 14-ounce cold rolled polished copper, tin, or copper nickel plated and lined on the inside. It may be had in eight sizes, which vary from 9¼ to 20 inches in height, and have a capacity of from 2¼ to 14 gallons. Detailed information in regard to this cooker, as well as many testimonials from people who have used it, may be had for the asking.

The Bristol Hot Plates.

The T. B. Harkins Foundry Co., Bristol, Pa., are placing before the Hardware trade and those handling gas stoves and similar appliances, the Bristol Hot Plate, which we illustrate herewith. With the advent of hot weather a demand usually springs up for domestic comfort in cooking. The most desirable way at present to obtain this in a proper manner, and avoid the excess of heat of the ordinary coal

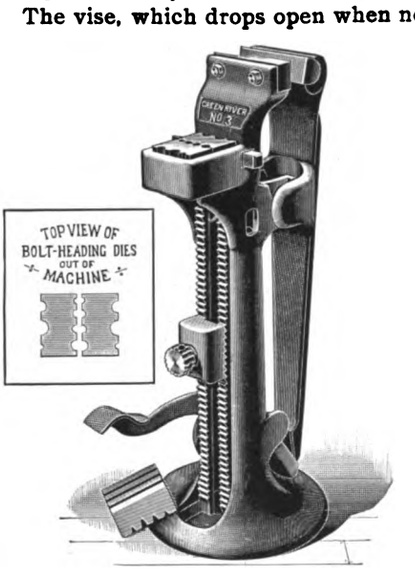


stove, is to add a gas stove or hot plate to the kitchen equipment. The one under consideration has been lately improved, and at present possesses many selling points, among which may be enumerated: The flame of the burner is now a direct one, and is low enough on the top of the stove, and is also large enough to give the required amount of heat in a great deal less time than is obtained in the ordinary manner, and is especially economical in the use of gas. A number of deep indentations radiating from the grate, it is claimed, allows the heat to reach every portion of the bottom of a vessel, even of large diameter, placed

Digitized by Google

on the stove. This is one of its most important selling features. The goods are finished in brightly polished nickel or in grey iron. The top of the stove is extra large, and the feet are only 24 inches apart on the most important size, No. 3, which allows it to be placed even on top of a narrow range.

Heller's Steel Shelf Box.



The W. C. Heller & Co., Inc., Montclair, N. J., whose Steel Shelf Boxes have been before the Hardware trade

for a number of years, have recently added an entirely new pattern of box which bids fair to supersede in popularity any yet produced. We give an illustration of the same herewith. It is constructed on scientific principles, the steel being imbedded in the wooden ends by a process entirely original and unique, and secured by steel brads driven from the inside through both the wood and the metal, thus forming in its careful construction a shelf box that presents no nails on the outside to work their way out and mutilate the shelving.

Shoeing Vise and Bolt Header.

The accompanying cut represents an improved foot vise with horseshoeing dies and bolt heading attachments brought out by the Wiley & Russell Mfg. Co., Greenfield, Mass. The vise, which drops open when not in use,

forms both sharp and straight calks, the forming die for this purpose being of tool steel of proper shape. The point is made that the die may be reversed when desirable, and that the vise is not interfered with in any way by the bolt heading attachment. The small cut, to the left, shows a top view of the bolt heading dies out of the machine, which are dropped in place, it is explained, or removed instantly without trouble. They are set firmly by driving a taper key which is always in place.

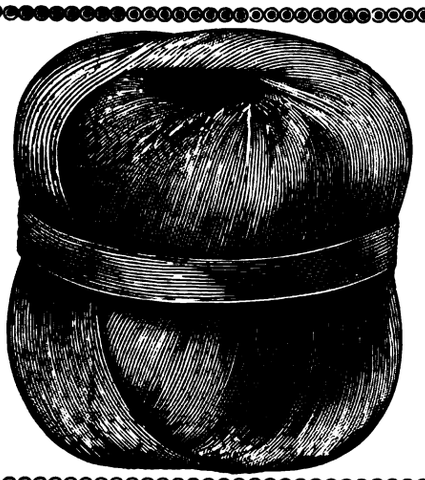
Chandler Ice-Cutting Machine.

Among the many devices for chopping or cutting ice for domestic and other purposes that have been placed upon the market, there are few, if any, which have met the degree of favor accorded to the Chandler Ice Cutting Machine, which is shown in the accompanying cut, and is being distributed to the Hardware and house furnishing trade by C. E. Jennings & Co., No. 101 Reade Street, New York. This is a compact, simple and strong machine,

which cuts the ice into small diamond-shaped pieces with ease and rapidity. It can be attached by screws to any table, counter or shelf and occupies a space only eight inches square. The machine has been improved by putting in a better grade of teeth, which are now hardened, for cutting the ice. Nos. 1 and 2 are galvanized; Nos. 2½ and 3 japanned. No. 1 deposits the crushed ice in a tumbler or similar receptacle. Nos. 2 and 2½ are equipped with pans for this purpose, which are furnished with the machine. List prices are given in an advertisement of this article on page 72 of this issue of *Hardware*.

Jenkins Solid Steel Hoe.

Jenkins Iron & Tool Co., Howard, Pa., are placing upon the market the Jenkins Hoe, which is designed to fill a demand for a strong, serviceable article of this kind for certain kinds of use. In its construction every effort is made to make a well balanced hoe, providing ample strength with a minimum weight. The hoe is made from a solid piece of steel, the goose neck being formed in a peculiar manner as shown in the illustration. The larger sizes,



being provided with heavier handles, are especially adapted for street and mortar hoes.

Henry C. Kelley & Co.

Among the leading houses in the manufacturing and distribution of twines and ropes in this city will be found the old house of Henry C. Kelley & Co., No. 548 Pearl Street. This is an old-established house, having commenced business in 1869, few concerns in the city covering the same trade antedating them. They handle everything in the twines and cordage lines required for wrapping, sewing and baling purposes and from every description of hemp. Their trade is of large dimensions, extending from Maine to California, and covers in its distribution everything from the smallest of cords to the largest of cables.

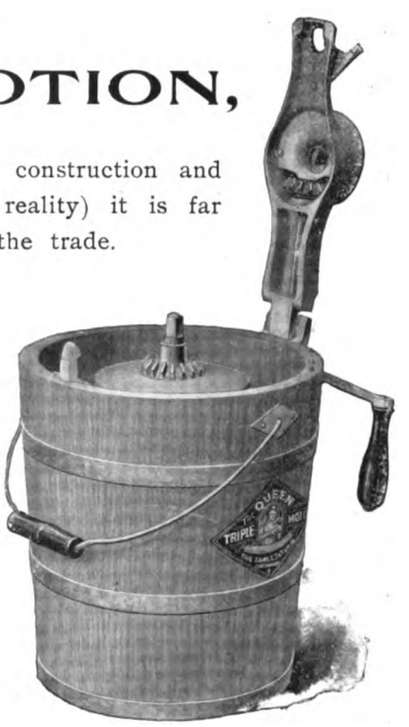
"WE GO FIRST CLASS OR NOT AT ALL."

Examine

the interior of the

QUEEN

TRIPLE MOTION,



And it will at once be apparent that in point of construction and principle of operation (a triple motion that is one in reality) it is far ahead of any ice cream freezer heretofore offered to the trade.

It is the result of many experiments in the making of cream quickly and economically.

JUST THINK OF IT!

Delicious ice cream after 1½ to 3 minutes' turning of the crank, thoroughly aerated, none of your simply "frozen stiff" kind, but light and smooth as velvet.

Pure, delicious, aerated ice cream is produced with less material, and the expenditure of less energy than can be attained with any other freezer ever made. To try it is to like it.

MADE IN ALL SIZES,

ONE QUART TO TWENTY-FIVE QUARTS.

We can furnish wheels for all sizes, costing little, but greatly reducing labor of freezing.

We have also "The PEARL," single motion. Sizes 2 quarts to 10 quarts.

Utilizing By-Products.

The question of disposal of waste material is an important one for every manufacturer and industrial community, states a correspondent of the New York *Tribune*. Preservation of water supply, availability of land for plant and storage, to say nothing of the pollution of the air and general health of employees, largely depend upon the solution of this problem, and it also means much in dollars and cents through the saving that incidentally may be accomplished.

Coal and iron men were the first to find the accumulation of debris a serious matter. Slack and slate could be put to no use. Furnaces were contrived that burned slack, but even then the difficulty was not obviated, for slate and dust remained. When coke was made a vast amount of braize (fine particles) accumulated. Riches went up in smoke until the by-product ovens came into use and ammonia, gas, tar and carbon were taken out, little being left Gas manufacturers found a ruinous waste till they began manufacturing tarred roofing paper, and even now they are not satisfied with the economy secured.

Iron mill owners from early days have not known until recently what to do with flue dust and slag, and workers of wood in saw and planing mills have had quantities of dust and shavings for which there was nothing but the furnace or torch, with danger of conflagration.

Pittsburgh has been a center of activity along these manufacturing lines, and here the solution of saving devices has first been worked out. Slag formerly was dumped out in great hot masses to be broken up later with the sledge and taken by rail to be used for filling. One day in Steubenville, Ohio, a workman, playing cold water through a hose upon red hot slag, accidentally turned the stream against molten metal. An explosion resulted, and when he looked for the slag it was not there. Instead he saw a snowy mass that looked and felt like asbestos. That was the beginning of the discovery of one form of mineral wool. Several iron and steel companies have improved upon the method, but the principle remains the same. The Illinois Steel Co., at Joliet, Ill., finds in this a means of using furnace slag at a profit. The wool is better than hair or tan-bark as a non-conductor for protecting and filling walls and floors of dwellings. Recently it has been used here in the manufacture of safes. Packed tightly between the steel walls, it is impervious to the burglar's tools. It will break any drill known.

Railroad men find that furnace slag, well broken, is excellent ballast. It is also ground here and made into tiles, fire bricks and Portland cement. The kind of product depends on demand and local needs.

The system of "briquetting" has provided new means of economy to both mill and mines. "Briquetting" has been known in Germany, France and Wales for several years. It was brought to the attention of Americans through consular reports. It consists in compressing in moulds, by simple and powerful machinery, any pulverized substance and holding it by some amalgam or "binder," such as resin, bitumen or oil. Three years ago Pittsburgh heard of machines for "briquetting" through B. C. White, a mechanical engineer now in Chicago, and H. S. Mould, a local manufacturer. Through this system and others similar, dust and waste fragments may be used. Among the substances handled at a profit are precious metal ores, tunnel dust, concentrates, coal, peat, lignite, coke, braize, iron ore, flue dust, manganese ore, iron, sand, cement, sawdust, cork dust, etc. The material is fed into machines and comes out in cylindrical chunks about three inches in diameter and four inches long.

The "briquetting" machine men complain that times are too good for them. Manufacturing establishments in Pittsburgh, Providence, Chicago and Philadelphiaare too busy or them to turn out the orders under eight weeks, and, when prices are good and profits are easily made, iron, coal and coke men are not particular about saving the little things. Times of reduced prices and narrow margins drive them back to the system of caring for scraps.

Mesaba ore, which crumbles easily, leaves a great deal of dust. Briquetted, it can be saved for $3.50 a ton. In the river valleys of Western Pennsylvania are three million or four million tons of coal dust, more valuable than slack or lump coal when solidified, as it is clean, not friable in moisture and possesses higher heat unit. Furnace flue dust is often 60 per cent. pure, and the value of a method of saving it is obvious. Briquetted coal is specially adapted to naval uses. Sawdust, compressed, becomes excellent fuel.

One of the greatest consumers of iron ore, the Carnegie Steel Company, has not adopted any method of working up slag and other furnace refuse, owing to the fact that it has spacious dumping grounds along the lowlands of the Monongahela Valley, that will be much more valuable when filled to a higher level. Safe and profitable disposal for several years is assured. When this fails doubtless some of the newest saving methods will be considered.

Slate, since the beginning of coal mining, has been a source of trouble and expense. A Monongahela River worker announces that it can be made into fireproof brick and moulds for casting ingots and other manufactures of iron and steel. Drain tile and sewer pipe of superior quality also come from this despised stuff. Over each bed of bituminous coal lies a layer of slate. This the mould-maker grinds as it comes from the slope or shaft, and, mixing it with something of the nature of cement, fires it to the proper degree of hardness.

There is no known limit to the use of materials heretofore considered as refuse. Manufacturers have only begun to see the opportunities within their grasp.

Changes in Harvesting Machinery.

It is wonderful to an old-timer to see the improvements in harvesting and threshing machinery which have come into general use, say in the past forty years.

The old "grapevine" or "turkey wing" cradle, in the hands of a good stout man, followed by some one with a wooden-tooth rake as binder (the binder, if up to snuff, would rake and bind after two cradlers) was thought to be near perfection in reaping in those days, and when from two to ten cradlers started in on a wheat field they soon put it in shock, especially if there were two or more in the crowd who were inclined to race. There are plenty of men living to-day who would at once recognize a "banter" when sounded by a cradler with his rifle or scythe stone by beating against the blade of a cradle and would feel like at once accepting the "banter" in like manner and trying for the championship, which meant either cutting into or around the man in the lead or making him "bush."

There are plenty of the older men who have used the flail or had their grain tramped out by horses or cattle and afterward cleaned the same with fanning mill or by holding it up repeatedly and letting it fall to be cleaned by the wind.

To-day we have the header and self-binder for reaping, and machines for threshing in such perfection that the handling of grain in quantities of hundreds of acres is a job more easily, perfectly and quickly dispatched nowadays than a "patch" of ten or twenty acres forty years ago.—*Kingman Leader-Courier*.

Experts say that the buried city of Pompeii has not yes yielded up a third of its artistic treasure; that at the present rate of progress seventy years will elapse before it it thoroughly unearthed.—*Ex.*

Inventions That Help the Farmer at Planting Time.

Up to the middle of the last century there was no connected progress of invention or improvement in regard to agricultural implements. Each country employed such types of implements as had been handed down from generation to generation. Improvements were rarely made, and, as a rule, were not perpetuated, but disappeared upon the death of the craftsmen, a trifle more ingenious than their fellows, who designed them.

To England belongs the honor of first setting in motion the stream of agricultural invention that has swept on steadily and with increasing volume ever since. About the close of the eighteenth century a number of improvements in agricultural tools were made in various parts of England. Iron came to be increasingly used and soon displaced wood altogether for the parts of tools and implements designed to be in contact with the soil.

As the United States was at first wholly dependent upon agriculture, invention in this direction began at a very early date in the national history, the American inventors beginning where the English left off. At this time, however, labor was too cheap for labor-saving appliances to be in great demand, and the country—but just reclaimed from the forest—too rough for rapid-working machinery to be possible.

One of the first American inventions for the exclusive benefit of farmers was that of the plow. The first patent was granted in 1797 to a resident of New Jersey. The claim was for a plow of solid cast iron—excepting handles and frame—consisting of a bar, sheath and mould plate. It cut and turned the soil very well, but farmers did not accept it at first because they thought that iron was poisonous to the land. In 1819 the plow was still further perfected, receiving its present form, the share, shin, mould-board and land—side being of cast iron. In this plow a characteristic American idea was thus early introduced, namely, the interchangeability of the parts.

The rapid development of the Western States gave rise to a great expansion of the plow industry. The use of steel and chilled iron resulted in many new inventions and improvements, and during the last twenty-five years the old-time single walking plow which followed the general lines of the inventions of 1797 and 1819 has been followed by sulky plows, gang plows, steam plows, disc plows and all have been brought to a degree of perfection in design, strength in construction and cheapness in cost that seem almost incredible.

Just as the first plow was a pointed stick, so the first harrow was the limb of a tree with extending branches. This suggested the A form of a drag with teeth inserted. This came down, with minor variations in shape, to the middle of the present century, practically unchanged. Then, in 1847, an American inventor patented a revolving disc harrow. Many have been the inventions and improvements since then. We have now, besides the common drags and harrows, lever harrows, spring-tooth harrows, disc harrows, etc., in great variety and style, and some of them are combined with seeders. The disc harrow has been developed into an excellent cultivator and finally into a plow.

Hand dropping and sowing of seed was the common practice down to the middle of this century. About 1730 an English inventor produced a machine that was the prototype of the modern drill and spent a fortune trying to establish its use by the farmers of his day. By the end of the century some advance had been made in the production of mechanical seeders; but few farmers adopted them and seeding continued to be done in the old way. The first American patent on a seeding machine was granted in 1799, and several others were issued during the early years of the century, but nothing practically operative was developed until the feeding cavities and devices for regulating amounts of seed to be delivered were invented and patented in 1840. The feeding and dropping devices having thus been invented some fifty years ago, various kinds of seeding machines—drills and broadcast sowers—were thereafter produced, improved and perfected and their use in agriculture thoroughly established.

The corn planter is strictly an American invention. The first patent of record for a corn planter was issued in 1839. During the years following several patents were issued that covered devices and improvements in hand and horse planters, the most important of which was issued 1853, and laid the foundation of the corn-planter industry. The hinged marker was successfully attached in 1857. The first patent on checkrowers was granted in the same year. Fifty years ago corn planting was all done by hand; now it is all done by machinery, the standard corn planters with checkrowers doing the most of it and drills and listers the rest. Corn planters are now substantially perfect in their construction and operation, and as labor-savers they are not excelled. The potato planter is a new, interesting and successful addition to the planter family.

The original cultivator was simply a hooked stick, like the original plow; this in time was developed into the hoe, which remained the common cultivating implement until this century was well advanced. In this country the hoe and the plow system of cultivating corn prevailed until corn fields began to be of considerable size when the single shovel plow was produced by some blacksmith, and later another shovel was added, forming the two-shovel plow which came into general use during the fifties. In 1856 a patent was taken out for a straddle-row two-horse cultivator, the first patent in this class of implements. Other patents followed, and these implements are now built in great variety—hand and horse, single and double, walking and riding, shovel-bladed, spring-tooth, disc, etc.—and in their manufacture millions are now invested.

A complete list of the devices now manufactured for the assistance of farmers at seedtime alone would fill this page, but the foregoing brief sketch will give some idea of the progress of invention in this important field.—*American Exporter.*

What's the matter with some enterprising Hardware house equipping railroad cars of their own with sample compartments and a traveler's corner, after the idea of theatrical troupes? Maybe this mode would not be more expensive in the end than the detailed system now in vogue, and probably more satisfactory. How to induce the buyer to visit these sample establishments on the track? Well, they might go there for novelty's sake first, and later on from force of habit.

Busy times should be synonymous with busy advertisers. As it is, busy times often produce the indolent advertiser. Some people are influenced to advertise only when business is so dull and orders so scarce, printers' ink obtrudes as the last straw.

Taking the earth as the center of the universe and the polar star as the limit of our vision, the visible universe embraces an aerial space with a diameter of 420,000,000,000 miles, and a circumference of 1,329,472,000,000 miles.—*Exchange.*

No waste paper basket has ever been constructed to hold good periodicals or magazines. No sooner does one by chance get in than out it comes again. There is always just one more who wants to read it.—*Our Wedge.*

Bees raised in Texas are shipped to all parts of the world.

THE NEW YORK PUBLIC LIBRARY

American Competition.

Why American industries are able to compete successfully with those of Great Britain can be assertively answered in a paragraph, says a writer in *London Engineering*. It is because of better organization; more complete adaptability of system; greater incentive; a higher, or broader, development of engineering as a profession; ready flexibility to meet new conditions, and because low priced craftsmen in Great Britain may and do more quickly become high priced master workmen, or foremen, or superintendents and proprietors, when transferred to America. But assertions are not reasons It is the examination of those causes which, in the opinion of the writer, permit this condition to exist, which must constitute an answer to the query propounded. * * *

Low priced labor is not necessarily, nor is it as a rule, the least expensive. The lower the price paid for a defined term of service, the less is the incentive to produce greater results within that term. This is inborn; it is human nature; the principle is correct; it will outlive trades unions, and harsh masters. The more effective the machine, or process, or plant, the better should be the man who responsibly controls or operates it, and the greater should be his recompense. And the corollary to this is: The better the man, the more accurate and the keener his intelligence, the better will be the thing which he will fashion every time.

British, Swedish, German, French and Swiss mechanics, that is to say, skilled hand workers, dexterous through long, careful apprenticed training in the use of hand and of machine tools, have been largely the foundation and the mainstay of the success of American manufacturers. To a considerable extent they occupy that position today. You teach the kindergarten principles; we complete or develop that training, and quite properly derive the benefit. Do you begrudge such a result when derived from such a cause?

Environment, in its broadest aspect, should be given, it is believed, the first place among the reasons for American constructive success. It is quite possible that an engraver or a watchmaker could ply his handicraft in the depths of a coal pit lighted by a tallow dip, but it is beyond dispute that the quantity of his work and the degree of his excellence would be much greater were the operations performed at the surface in the full volume and steadiness of the north light. Would auld Scotia have had that proud distinction "never conquered" had the national tipple been less inspiring than usquebaugh? Think of fording Highland burns or trudging miles in moorland mists on a diet of dough and beer! These simple illustrations must suffice as well for the intellectual and the moral as for the physical.

Closely allied to this phase of the matter is freedom of exercise of ambition upon the part of the operator, and measurably proportionate pay for the results obtained. This covers the great principle of incentive, and applies both to the operator and to the proprietor. Americans can in nowise claim to have reached an ideal position in this respect, but it is maintained that this principle has been carried further in America and has produced better effects than the system in vogue in Great Britain and elsewhere, the consequence of which is to produce an average result equal to that of the least efficient member.

The position, as a manufacturing nation, of Great Britain is that derived from dear-bought and long time-developed experience. May it not be accepted as an axiom that that which is obtained slowly and by arduous effort will be the longer cherished and retained? Experience is the most valuable asset of civilization. It is also, too frequently, the greatest bar to progress. Pig headedness, obtuseness and stupidity are often excused on the plea of "experience." It is mainly from too firmly anchored opinions which have sprung "that conservatism which fights all innovations, simply because they contravene present ideas and practices, and against which advancement must ever contend." On the other hand, the relatively high place occupied by the United States in all except the heaviest classes of machinery, forgings, etc., has resulted to a considerable degree from successful experimentation, the consequence being a greater and better output in less time, or with less labor, than is possible by old methods. It is confidently asserted as a fact of common knowledge that the necessity or the desire or the spirit which conceived the vision of an improvement in process or method, and then promptly carries it through to a successful practical demonstration, is the most likely to be eager and ready to improve upon the improvement if the opportunity is presented. "Every undertaking, properly executed (should) bring about improvements in the process of execution."

There is no doubt that the interchangeable, or, more properly, the duplicate system of construction of the component parts of machinery and structural steel members, has been carried to a higher stage of development with us than elsewhere. The contingent advantages arising from this development could hardly have been foreseen by the early promoters of the system. It undoubtedly has had much to do in generalizing the practice of paying for construction by the piece, or to base the per diem wage upon the number of parts or operations produced in a given time with given facilities. It is only by the proper carrying out of this method that the ability of the operator can be ascertained and obtained; it is only by this method, too, that the operator can obtain increased wages for the higher cultivation of his skill. Moreover, it is only by this method that the full capacity of the improved machine, or special tools or fixtures, can be derived. Thus, the engineer who designs a tool whose output of a certain kind is increased over previous practice, is entitled to that increase. Again, the operator who by diligence and the exercise of his ambition obtains the greater output from that tool is entitled to the larger remuneration. A really successful duplicate system of construction involves intelligent co-operation. The consequence of this co-action with us, and there has been much of it, has been a higher average of wages to the workman, and a greater or a better (and hence more salable or more profitable) output for the proprietor. This would seem to come fairly close to the "business end" of the matter.

This inquiry can also be well answered from another point of view, one which, because both complimentary and truthful, may be the more gracefully received. The condition indicated has been largely produced, or made possible, from those splendid British characteristics, tenacity of purpose, perseverance, stubbornness, patience, loyalty, respect for usage, and maintained performance of duty according to the conscience or under orders. These attributes, when applied to new fields of progress, mean slowness of change from existing methods, more or less of defiant, crusty opposition to modification; satisfaction with that which has been accomplished in the past, and stolid confidence, or indifference, as to the results of the future. Great may be the impetus due to environment; much greater may be the restraint of precedent! And just how this may operate in practical life may best be illustrated by the presentation of an imaginary case, Thus, assume two engineers, British-born and bred, each the equal of the other in technical training and general commercial ability. Place one in charge of an old established manufacturing plant, venerably situated, every machine with a legendary history; the operators descendants of operators, skillful as, and only as, their forbears were skillful. On all sides, within as without, the same adolescent conditions

Digitized by Google

prevail. Why "apply a ruthless hand here? Why not maintain 'the even tenor of his way?'" The time-honored plant will remain and, mayhap, the business will continue. Now imagine our other engineer with an exactly similar plant and business, but that all are transposed intact to, say, the heart of our New England, with its all pervading atmosphere of energy, invention, system and exactness. How long can he there continue commercially? Theoretically, not one day; practically, until his capital is paid out. The time-honored plant would remain, but the business must of a certainty vanish or change hands. But imagine that, becoming quickly imbued with the spirit of progress (the necessity, here, of existence) he casts the archaic tools aside and razes to earth the roof and walls, time-honored though they be. Verily, the shadow of antiquity will have departed; but the seed and essence have been retained! And in the goodness of time Engineer No. 2 may with some justifiable elation, supply Engineer No. 1 with the results of modern enterprise. The lion may slowly raise his shaggy head and growl a bit, but, well, "'tis his nature to."

The foregoing phantasy may be objected to as indicative of irreverence. Undoubtedly that is true. But while it has chiefly been employed to point the moral of a condition rather than a theory, it also leads directly to a well-defined characteristic and practice peculiar to American constructors, namely, the knowledge of when, and the courage to, promptly discard outfits of special tools, even when originally very expensive and yet measurably efficient in performance, when a still better and more productive design is suggested for substitution. This is where American civil and mechanical engineers have scored their greatest successes, the outgrowth, it may be said, of cultivated dissatisfaction with anything susceptible of improvement. Such actions frequently involve sweeping changes and complete rearrangement of machinery and personnel, and an upheaval of this kind is the most severe test of the duplicate system. Right here may be quoted some observations recently expressed to the writer by one of the most expert and successful mechanical engineers and superintendents in New England: "The chief trouble with the foreign mechanics is that they know only one branch of the business, which is due to the laws of their trade unions, which in many cases prohibit the working of more than one machine; hence they learn only one branch of the business. This destroys the ambition of the workman, and limits his production and his value. This is especially the case with the English trade union mechanic. For files and fitters, or vise men only, Germans are the best men for this class of work we can get. Their early training at hand work makes them expert in this line. The Swiss are fine workmen, and they take advantage of machines very readily. The Scotch and English workmen are also hand workers, and they are our blacksmiths or anvil forgers. They are the only fine smiths in America to-day, as this business has no attraction for the native boy, who usually prefers to take a clerkship at about one half of the remuneration."

The Blacking of Ironwork.

The following will be of use in the workshops of many of our readers. Japan is mostly employed for the blacking of ironwork, and is made of two sorts, viz, that which is known as baking japan, which requires heat to harden it, this being the kind mostly employed with cycles; and that which dries in the open air and at the ordinary temperature; and it is of this nature that the now much-used cold lacquers partake. The ordinary black japan is made by dissolving asphaltum, and then mixing and boiling it with oil. That which calls for heat to harden it is permanent in tone and quite durable, the japan being burned, as it were, into the metal; whilst that which dries at an ordinary temperature is not at all durable unless protected by a coating of good varnish. Smaller pieces of ironwork are dipped into the baking japan while warm, allowed to drain for a short time, and then put into an oven and heated to a temperature of several hundred degrees Fahr., when they emerge from the oven with a beautiful jet tone and high lustre. This plan is very useful for goods and parts which have got shop-worn or dull from being stored too long. For fine ironwork it is best to apply a coating of dead black color first, on account of the great transparency of the japan, which a few moments afterwards can be applied with a brush. The ordinary asphaltum varnish is a similar substance—a jet black, which dries quickly without any extra heat. It should be thinned with a very little turpentine and applied with a brush. The air-drying japan does not harden so well as that which is baked, and its gloss is soon lost, but for any parts which are not much handled it may be recommended.

An alternative method of blacking iron is to employ ivory black ground in brown japan. This is made up much of the consistency of butter, and requires to be well thinned with turpentine, a small flat camel's hair brush being used. It dries in a few minutes, and should then be varnished. When work is wanted in a hurry, one or two coatings of French shellac varnish is as good as any, as it dries in five minutes or so. For cheap work, lamp black and varnish for the carriage shop, or lamp black and shellac varnish for the harness shop will do admirably, but asphaltum is, of course, to be preferred. For the japanning of small articles, the best brushes to use are 1-inch flat badger bass brushes with tin ferrules. When working, it should be borne in mind that all japans are transparent, and that when one coat over a bright metallic surface does not cover satisfactorily, a second coating must be applied, care being taken that the first coating has become thoroughly dry, or rough, dull work will result.—*The Carriage Builder's Journal.*

Horseless Fire Engines.

Now that the automobile is coming into such general vogue that all the traffic of our cities bids fair to be revolutionized thereby, we must look for a corresponding reform of our great municipal fire departments. Steps in this direction have already been taken in Paris, where every fire brigade is to be equipped with horseless engines and apparatus; in Buda-Pesth, where self-propelled fire engines have become a familiar sight, and in New York, where the Chief of the Fire Department can daily be seen darting to points of danger in a specially constructed automobile of his own, with which he can distance all other vehicles on the way. In New York, as well as in other American cities, such as Boston, Hartford, Pittsourgh and Buffalo, powerful steam fire engines which can be run without the assistance of horses, have indeed been in use so long that they are no longer considered in the light of experiments.

This is but as it should be, since fire engines run and operated by steam must in truth be regarded as the first practicable forerunners of the modern automobile. Long before automobile pleasure carriages were heard of powerful steam-traction engines were employed to fight fires, and some of them were brought to such a point of perfection that even from our present *fin-de-siecle* point of view they leave but little to be desired.

It appears strange, in view of the great progress of electricity in America, that so little in that line has been attempted in connection with fire engines.

The City of Paris, in this respect, is more advanced even than the cities of the New World. Already many self-propelled fire engines, horse-wagons and hook-and-ladder trucks of various types of construction have been put in operation, and others are added as soon as available, until every important fire station will have this modern equipment.—Capt. Cordier, of the Paris Fire Department *in The Automobile Magazine.*

Stage Hardware.

Theatrical Hardware is something that the theatre-going public doesn't know much about, but it is a most important part of the scenic parts of every play that is staged, and forms a considerable part of the expense, says the New York *Times*. Stage Hardware is an expansive term, and includes many things that would be a surprise to people who believe in the exact application of terms. Rainstorms come in correctly in the classification, hailstorms to some extent, and snowstorms and fogs also go with the Hardware, but not so aptly.

Genuine Hardware includes the big three-headed steel screws, brace hooks and eyes, clamps, braces, mortises, windlasses and curtain guides, and a stage carpet tack would be a surprise to the housewife who thinks she knows everything about house-furnishings. Stage grass, money, lamps, ropes and a good many things in the nature of properties get mixed up with the Hardware, and the corners, keystones and profile of wood are most important. The latter is used for innumerable purposes.

There is a little woman in upper New York who has a monopoly of a good part of the theatrical Hardware business of the city. In a little shop of which she has been in charge with her son since her husband's death she was telling some interesting things about the business the other day and revealed some of the stage secrets of plays now running in New York.

"Profile is one of the most important things in the business," she said, "and it is used for almost everything that can be imagined. Profile is wood which comes in long sheets a quarter of an inch in thickness. For all the fancy decorations in rooms this profile is used, for trees and vines, of which the audience sees only the face, pillars, stumps of trees, and almost everything that any one could mention. To show how it is used there may be an orange tree in the play which is seen standing by one corner of a house. A sheet of profile is fastened down the length of the house, on it is painted the orange tree, the leaves and fruit outlined, and then they are all cut out, and there, as far as the audience can see, is a well-developed orange tree.

"There are small saws a foot and a half or so long which come for the purpose of working with this profile, and they are sold with it, a dozen at a time. They have the appearance of the tiny saws that are used for fret-saw work, only on a larger scale. They would come under the head of genuine Hardware, and they are the only things with which the profile can be cut satisfactorily.

"In 'The Man in the Moon' a great deal of profile was used. There were 2000 square feet in one act for the arches and fancy work. Then the chariot in 'Ben Hur' is made of profile. Oh, yes, it is quite strong enough, for there is no weight that comes upon it. All the supports are of ironwork, and the horses do not draw the chariot. They were trained a long time for that play, and they gallop, but the chariot does not move; the wheels are turned by an electric motor inside.

"I suppose no one doubts that there are real lamps in the play of 'Sherlock Holmes,' and that one is broken every night. They are genuine lamps, and there is real oil in them, and they are not only broken in the play, but Mr. Gillette has broken one at every rehearsal. We made three lamps before we could get one that was just the thing for that play. There is the regular lamp, but the oil is not in that; it is in a brass tube that is inside; the burner fits on that tube, so that when the lamp is broken the oil is not spilled; the force of the blow puts the light out immediately, and there is no danger. They order those lamps 100 at a time, and they are sent up by the barrelful.

"The miner's lamp they use in the gas-room scene, the lamp that is put behind the box, was the hardest thing to get. Mr. Gillette knows exactly what he wants and it must be exactly right. They took the play to Scranton and thought they would be able to get one there without any trouble, but they couldn't find the right kind. Then we undertook to get it, and finally found one that had been kept for a souvenir. It was such a rusty old thing that no one would have given ten cents for it, but it was just what we wanted.

"How do you suppose they work that cigar in the same scene? We don't furnish anything for that but I know how it is done. The cigar is in the wall there by the window all the time. There is an electric light through it and there is a box over it, which, just at the right time, Mr. Gillette knocks off. I bought the gray shawl that Mr. Gillette wears when he comes in disguised as the old man. I had to try some time to get just what was wanted, the kind that an old man would wear. It takes a woman to get things like that. She has more idea of what is wanted. The Hardware for that play cost altogether over $400.

"The Hardware, ropes, etc., for 'Hearts Are Trumps' cost over $500. There are 12,000 feet of rope used in that play. No, we didn't have much to do with the avalanche. The play came from the other side, and it was made there, but it had to be remade over here. We are preparing a rainstorm now for the Empire Theatre. You have a 1¼-inch pipe with holes six inches apart, a rubber hose attached, and then the water is turned on with more or less force, according to the storm required. An ordinary rainstorm would cost about $15 to prepare. Snowstorms are comparatively cheap. In 'Way Down East' it snows through an entire act. Snow is sold by the pound, and that storm would take about eight pounds of snow at fifty cents a pound. The snow is put up in a bag with holes in it, and then two men pull it, one up and one down. The snow falls from a height of about thirty feet, and when it gets within ten feet of the stage it begins to flurry, from the currents of air it meets. Snow can be used over and over again, so it isn't expensive.

"A fog is a great extravagance. One will cost $25 without making. It takes the very finest gauze, which is $25 a piece, and then there are the ropes and other things that are required. Hail is made of beans falling on wood or iron, according to the force of the storm, and that is not expensive.

"Melodramas are the most expensive plays in the way of Hardware, usually. 'The Great Ruby' was an expensive play. The trap for the balloon in that play cost over $1000, and the Hardware and the ironwork cost $700. Mr. Daly was one of our best customers. He was a splendid manager and knew exactly what he wanted, and never minded the expense if he got what he wanted. He wanted the best of everything. There are many things bought for a play and then not used. They are never sent back, but put aside, and are so much loss. There were some scales, the very best that are made, bought for the 'Runaway Girl,' and then they were never used. Charles Frohman is another manager who wants the best of everything, knows what he wants, and is pleased when he gets it.

"The carpet nails that are used in the stage carpets have not much resemblance to the ordinary carpet tacks. It takes about two dozen for an ordinary carpet. They have heads about an inch and a half in diameter, and are put into brass sockets.

"Something new that we are having made now is English banknotes, for we are having so many English plays. Heretofore we have had only the regular $10 bills that are always used for all stage money. There has been a great demand for stage money lately. I have sold more within the last few months than I ever have before. There is one woman who has been in to buy it several times. I don't know what she uses it for; some trick I suppose. She only gets twenty-five cents' worth at a time. It costs seventy

Digitized by Google

five cents for one hundred $10 bills; it is something of a green goods business.

"A play with a good many scenes always takes a good deal of Hardware, like 'Henry V.,' which Mansfield is going to bring out with seventeen scenes. 'Ben Hur' took a great deal, and plays like 'The Man in the Moon,' 'Hearts Are Trumps' and 'From Broadway to Tokio.' The Metropolitan Opera House uses a great deal of Hardware for the different mechanical effects it has there. The management spends regularly from $200 to $700 a month."

Progress of Invention in America from 1800 to 1900.

Perhaps the most striking product of American ingenuity is the modern twenty or thirty story office building, a type of structure rendered possible by two comparatively new inventions, the passenger elevator and improved steel. Nowadays every high building in America is erected on a skeleton of steel, which has to be of a certain quality in order to bear the weight, and the production of such metal depends upon processes not long known. As for the passenger elevator, the first devices of the kind were introduced not more than thirty years ago. The dwellings of a hundred years ago—even those of the rich—were vastly less comfortable than those of to-day. They were not provided with running water, which in the laborer's cottage of the present time is regarded as an indispensable requisite to comfort. What is called modern plumbing was of course unknown, and the luxurious bathroom, with its hot and cold water and sanitary apparatus, was as yet unheard of. There were not even comfortable stoves, and hot-air furnaces were a thing of the future. Nobody had yet thought of steam heating.

The houses of that day had no carpets of the modern sort and wall paper was unknown. Woodwork, now produced by machinery, had then to be made by hand entirely, and was proportionately expensive. All of these things, now matters of course in every well-to-do household, are nineteenth century inventions. In the year 1800 pretty furniture was a luxury that cost enormously; at present good and really artistic things in the way of *ameublement* for the bedroom, dining-room and drawing-room can be obtained at prices almost incredibly small. And we must not forget the multitude of small ornamental articles purchaseable to-day for next to nothing, all products of modern ingenuity.

Conveniences in the way of furniture have been created in astonishing numbers in the last few years, among which may be mentioned folding beds and articles convertible to a variety of uses. The kitchen utensils of to-day would astonish the old-time housekeeper, from the mechanical egg beater, to the dish-washing machine. It is a mystery how the people of 1800 got along without wire fly screens. Cheap mirrors were unknown to them. If their dwellings caught fire they had no fire extinguishers or fire escapes, and there were no steam fire engines to come to the rescue. For illuminating houses there was nothing better than oil lamps or candles, and such a thing as a friction match had not been thought of. It was not until 1827 that the lucifer match came into use. Think what a revolution in human affairs has been brought about by this little invention! Its discoverer deserves to be called a second Prometheus.

There were pianos of a sort in those times, but nothing like those of the present. Nowadays we even have pianos that play themselves, and which reproduce the performances of the best masters with absolute accuracy. Through the development of machinery, indeed, more and more of man's work is being relegated to automata.

The printing press, perhaps the most wonderful of all mechanical achievements, is a most highly complicated automaton. In its latest form the newspaper press prints several colors at one impression, folding, stitching and counting in an hour 12,000 colored supplements of twenty-four pages each. The presses used by the great magazines move at a slower speed, but do more perfect work, several highly specialized patterns of machinery being employed, according to the paper used and the kind of printing to be done. The machine that attaches the cover to a magazine is another ingenious device of recent invention, one of the many modern improvements that have made it possible to place good literature before the million at the low prices that now rule.

There could be no better illustration of the progress of mechanical art during the present century than is furnished by the development of printing machinery. In 1800 the entire process of making a book or a newspaper was done by hand. Indeed, newspapers as we know them practically did not exist, and the age of illustration, with its multitude of patented processes for producing and multiplying pictures was yet to arrive. In those days paper was made almost exclusively of rags and was very costly. Nobody had thought of utilizing for paper-making the material of the forests, which is now being devoured at the rate of thousands of square miles annually for the production of the daily prints. Still more recent is the perfection of the linotype or mechanical compositor, which sets type with great accuracy and rapidity, casting the molten metal as fast as the words can flash through the mind and fingers of the operator who transcribes the "copy."

Who supposed in 1800 that such a thing as a machine for sewing would ever be devised? Attached to the earliest model of Elias Howe's invention, exhibited at the Patent Office, is a label on which is written the couplet:

"I am the iron needlewoman
Born to toil but not to feel."

Another type of sewing machine has been invented for operating on shoes, and in consequence of these wonderful machines good clothing and good shoes are now within the reach of almost every one.

What the sewing machine has done in its own field has been accomplished for the art of writing by the typewriter, which may be said to have come into being within the last twenty years, industrially speaking. It has opened a new field for women's work, and actually has enormously increased the quantity of matter written. It has rendered letter writing so easy that many people now keep up a large correspondence who would write very little by hand. Incidentally, the volume of the mails has been proportionately augmented. Speaking of mails, how striking it is to consider that in 1800 there was no such thing as a mailing envelope or an adhesive postage stamp! In those days it cost 25 cents or more to send a letter a short distance, whereas one now may ship an ounce of correspondence across the continent for 2 cents, and printed matter passes at still lower rates.

Before going further we ought to speak of agricultural machinery. At the beginning of the present century there was nothing of the kind in existence. No way of reaping the crops was known except by hand. It may fairly be said that the inventions of McCormick and others have made this country agriculturally. The vast grain fields of the West could not possibly be reaped by hand. Nor, again, would it be practicable to carry the grain to market without the aid of modern inventions in transportation. These latter have been essential to the development of the agricultural resources of the country. In old times the producer's market was limited to the district he could reach with horse transportation. The cost of getting our grain from the fields of the West to Europe would be prohibitive without railways and steamships.

The screw propeller, invented by Ericsson, and the air-brake, invented by Westinghouse, are the most important inventions in this field, after the invention of the steam engine itself. The bicycle is too familiar to require more than mention here—it is a product of the last quarter cen-

Digitized by Google

tury. The textile industries are well-nigh the creation of the last hundred years, as is also the vast group of industries depending upon iron and steel. The marvels of the telephone, the telegraph and the electric light are so familiar as to require no description. When the projected cable has been laid from San Francisco to Manila it will be practicable to send a message around the world in three seconds. The electric street railroad is an accomplished fact, and experts are of the opinion that before long steam locomotives on all railways will be supplanted by electric engines.

At the beginning of the present century the methods of obtaining metals from their ores were comparatively crude. Modern science has improved them vastly, and most particularly with regard to silver and gold. The so-called "cyanide process" for extracting gold has made it possible to work low-grade ores at a profit, and to this invention is due the development of the mines of the Rand in South Africa, which now yield $50,000,000 worth of gold per annum. If it were not for the cyanide process they would not be worth a cent. Partly due to improvements in the extraction and refining of metals has been the modern betterment of guns, warships and all sorts of military engines. The art of war, indeed, has progressed quite as much during the present century as any other art. One of its most marvellous engines is the fish torpedo, which swims beneath the water and carries the doom of a battleship in its nose.

Paper to-day is employed for an immense number of novel purposes—for carpets, electric conduits, lead pencils, car wheels, boats, pails, coffins, brushes, combs and telegraph poles. The cheapness of envelopes is accounted for by the fact that a single machine cuts, folds, gums and prints them. The cash register is an invention of no small importance. Cotton-seed oil was a waste product a few years ago; now it is one of our great exports, thanks to machinery which cleans the seed and expresses the oil. From a century-old point of view nothing, surely, could seem more wonderful than photography. That it should be possible to make the sun come down and take pictures was never dreamed of in the philosophy of Franklin and his contemporaries. Lithography, by which the most beautiful pictures are printed in colors from stones, is another latter-day marvel.—ARTHUR P. GREELEY, Assistant Commissioner of Patents, *in Munsey's Magazine.*

Eli Whitney and the Cotton Gin.

Many of our readers may be interested in the following account, taken from the *Farm Implement News*, of how the cotton gin, that has done so much to make cotton so great a factor in the commerce of the world came to be invented.

Eli Whitney, born on a Massachusetts farm in 1765, was but a boy when his country was fighting for her independence. Though a farmer's son he had an innate desire to make things of iron, and to make them better than other people made them. His talent in this line, shown in his early years, was given some license by his parents. So effective was it that it pieced out well his father's small income and attracted not a little local attention. Though ambitious as an ironmonger, he also developed ambitions for a classical education. So having earned a small sum by his clever shop work, he entered Yale College in 1789 and graduated four years later.

Four years of classics had remodeled his ambitions completely. With an aspiration to teach a private school he started South, where the country then offered good inducements in this line. It so happened soon after his arrival in Savannah that he met the widow of Major-General Nathaniel Greene, the greatest Southern general of the Revolutionary War. By Mrs. Greene he was invited to spend a few days on her plantation, where was then residing Phineas Miller, himself a graduate of Yale. A little talk with Phineas Miller and Mrs. Greene induced Whitney to take up the study of law instead of the profession of school teaching.

Whitney's inventive genius and skill with tools had not been smothered with Greek and Latin. Some incidental show of cleverness in the Greene home attracted his hostess' admiration. When a fortnight or so after his coming, at a gathering of leading Georgia planters at her home, the lack of a good cotton-cleaning machine was deplored, Mrs. Greene, woman fashion, said to these puzzled business men: "Get my friend, Mr. Whitney, to make you a machine. He can make anything."

To Whitney, who had never seen cotton growing, nor yet a cotton seed, the needs in the case were explained by the planters. He promised to think over the matter. He shut himself up in a little log house near the Greene mansion for ten days. At the end of this time he had contrived a model of a cotton gin—practically the same machine that cleans the cotton of the world to-day.

To show the tremendous money value of this ten days of good thinking, a glance at the condition of the cotton industry in 1792 is necessary. Cotton had been grown in the world since history knows not when, it being indigenous to all countries within certain latitudes. Cloth was made from it by native Americans from Patagonia to Mexico, as it had been by the Egyptians for some two thousand years before America was discovered. But the manufacture was feeble, and attended with many difficulties even up to the end of the eighteenth century. The two great drawbacks to the manufacture of cotton fabrics were the lack of the necessary machinery for spinning and weaving, and for separating the seeds from the lint.

Just before the coming of the cotton gin three notable inventions in the textile industry had been brought forth. These were (1) the spinning frame, a machine by which cotton could be twisted to a hard warp for weaving; (2) the spinning jenny, a machine for spinning more than one strand at a time; and (3) the power loom. All of these greatly cheapened spinning and weaving. But their usefulness was limited as long as manufacturers could not get cheap cotton. The whole world was looking for an Eli Whitney when this young college graduate met the Georgia planters at Mrs. Greene's.

Beveling Glass.

Beveled glass is not new, says *China, Glass and Lamps*, but it is now far more extensively used than formerly. Twenty years ago beveled mirrors were comparatively rare; now they are common and are seen in many shapes and sizes. Beveled plates, large and small, and both straight and bent, are used for various other purposes. The process of glass beveling is very simple, but the work calls for skill on the part of the operators.

The plate to be beveled goes first to the roughing mill, which is a solid, heavy steel wheel about two feet and a half in diameter, set horizontally, and turning at a high rate of speed. The upper face or top of this wheel is slightly roughened. Suspended over the wheel is a big hopper containing sand, which is fed down through a spout in such quantity as may be required upon the top of the rough-faced steel wheel. The grinder holds the plate to be ground in his hands, with the edge to be ground off upon the face of the roughing mill; he shifts the plate along as the glass is ground away. The expert grinder, holding a sheet of glass against the roughing wheel in this manner will grind a true bevel, with a perfectly straight line along its inner edge, and he brings the side bevel together with a perfectly true angle at the corners.

In the roughing mill the bevel is wrought to shape but its face is rough looking and feeling, in fact, like what it is, ground glass. The plate goes then to the emery wheel, also of steel and set horizontally. Suspended over the

Digitized by Google

wheel is a little hopper filled with emery, the emery feeding down upon the wheel. Upon this wheel the rough face of the bevel as it comes from the roughing mill is again ground, the plate being held in the same manner by a grinder, and the surface is brought nearer to smoothness.

From the emery wheel the plate goes to the smoothing stone, which is also set to turn horizontally. The smoothing stone which is of an extremely fine sandstone, is made with its upper surface, that against which the glass is brought, very slightly convex. This stone is finished perfectly smooth and it is so fine grained that to the touch it seems almost to be polished. A tiny stream of water enough to keep the face of the stone wet, is made to trickle down upon it and the glass is held to this wheel just as it was to the others, and here the beveled edge is brought down to a smooth surface, but not polished. The plate goes then to a polishing wheel made of wood and set to turn vertically; the bevel edge of the glass is held against the face, or edge of this wooden wheel as it rapidly revolves. The face of the wheel is kept wet and constantly supplied with pulverized stone. Upon this wheel the beveled edge gets its first polish. The glass then takes the final step in the beveling process. It goes to another wheel, also of wood, and also turning vertically, whose face is of felt. The face of this wheel also is kept wet and it is supplied with a fine polishing material called from its color, rouge. Here, as at the first polish wheel, the glass is held with the bevel against the edge, or face of the wheel. On the rouge wheel the bevel gets the final polish and finish and the surface of the beveled edge, which after the first operation, was rough like ground glass, is now as smooth and polished as the flat surface of the plate.

Great plates that are too big to be held by hand are locked into a frame that can be so moved as to bring the edges to be beveled against wheels adjusted for the purpose.

Where Glass was First Made.

The invention of glass has been hitherto popularly ascribed to the Phœnicians. Mr. Ludwig Grote, however, in a recent number of *Fielding's Magazine*, states that this is not the case. Mr. Grote points out that another hypothesis on the same subject is equally untenable, namely, "Flavius Josephus, who ascribes the discovery of glass to the Jews, as the result of a forest conflagration, when, with the assistance of the sand in the soil, the glass came into existence of its own accord. As the Phœnicians and the Jews were neighbors," proceeds the author, "there is very likely an element of truth in both traditions, inasmuch as both people exercised the art of glass-making at an early age."

If the Phœnicians were the first to carry the productions of glass into the world, by means of their traders, the Jews did the same to a greater and more lasting extent. Among the latter there were whole tribes carrying on the making of glass. Most of the glass works at that time existed on the coasts of the Mediterranean, and throughout the whole of the Middle ages, even up to the present time, one kind of glass-blowing industry has been in the hands of the Jews, especially in Palestine itself. Many expressions which were common in the glass-works at that time are still in use.

But neither the Jews nor the Phœnicians can be looked upon as the inventors of glass. We find, for instance, that the Persians at the time of Alexander the Great were also drinking out of glass vessels, that the Assyrians were versed in the art of making glass, as we can prove by discoveries at Nineveh; and also that the art of making glass and of imitating precious stones were known to the ancient Indians. Of great importance with regard to the history of the manufacture of glass are also the ancient Egyptians.

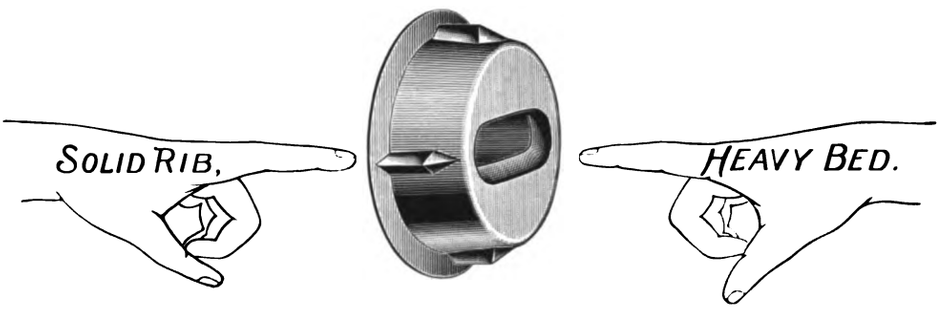
When one remembers the great industrial activity of these people, it is not surprising that with reference to the making of glass more numerous traditions of it are recorded by them than by any other people. Not only written, but also figurative representations which are more than 4000 years old, have been handed down to our time. The wall reliefs in the groves of Beni-Hassan represent the manufacture of glass objects; they represent, among others, two glass-blowers at work. They are working with the blowing-pipe, which they have dipped into a mass lying between them, and by means of which they blow out a vase.

What extremely beautiful glass was manufactured, even at that time, is proved by a crystal glass which is to be found in the museum of Louvre. The French, as well as the English museums, possess numerous artistic productions of that period, at the sight of which one is surprised, as in our time with our mechanical appliances it is hardly possible to surpass them.

The Romans appear to have been the principal customers of the early Jewish glass-makers, and with the increasing luxury of that epoch, the manufacture of glass increased, as it was not limited to the production of smaller useful objects, but also extended to the building trades. That the manufacture of glass developed in an artistic sense to the highest point need not appear wonderful, with so extremely intelligent a people as the Romans. The treasures contained in the museum of the Vatican, in the French museums, and in the British museum bear testimony to their accomplished workmanship. The famous "Portland Vase" is probably the best proof of it.

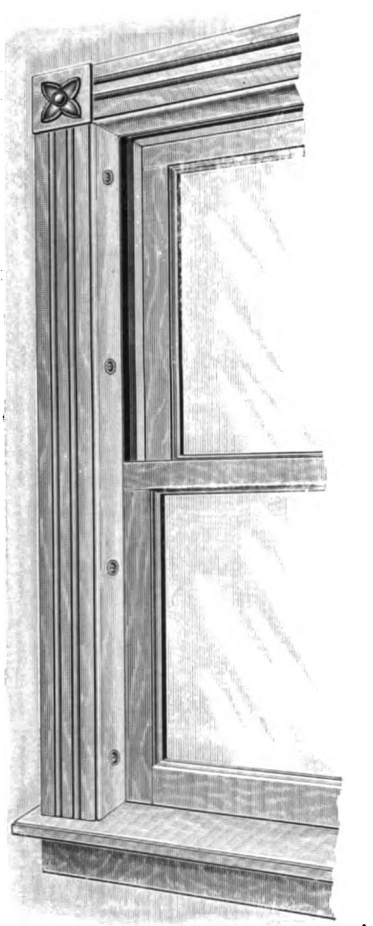
In the year 210 A. D. there were so many glass-blowers in Rome that they had set apart for them their own quarter of the city. But with the fall of the Roman Empire came also the decline of the art of glass-making; with the extension of Christianity the glass industry gradually developed again.

Supremacy of American Labor.



The contrast between industrial conditions in the United States and foreign countries can scarcely be commented on too often. It is one of the greatest factors in pushing America to the front as the leading producer of iron and steel. There have been many causes contributing to the placing of the United States in its present position, but the main one has been the superior efficiency of American workmen, and this in turn has been due to a variety of causes. The spirit of the country is that of progress. The high wages paid to the workmen have stimulated them to greater efforts and have enabled them to live under the best conditions for increasing their physical and mental powers. A workman who eats meat two or three times a day is better fitted for his work than one who only eats it occasionally.

While the high wages were a bar at the start to cheap production, their effect has been to steadily increase the efficiency of the workman, so that in one branch after another the output per man was so increased above that in England and other foreign countries that exports became possible. It is now the case that in many lines of iron and steel manufacture the actual wages cost per ton of product is less than it is in England, although the wages per man are much higher. In some special lines, such as tin plate and sheet iron, this is not the case, because wages are paid by the ton and the increased output only further increases the earnings of the men, although there is a decreased charge against the interest on the investment.



It is a somewhat remarkable fact that the superior efficiency of iron and steel workers in the United States is not due simply to their being largely American born. The foreign workmen who come to the United States soon imbibe the spirit of the country and become more efficient than they were in the country from which they came. Their improved surroundings and the greater opportunity for improvement serve as a stimulus to bring out their best powers.—*Tin and Terne.*

"DIAMOND" TOOLS

POTATO SCOOP FORK.

Made from one solid piece of steel of best quality. Oval tines with flattened points Scoop is deep enough to make the capacity of the fork large without being inconvenient to use. Iron D handles and strap ferrules. The fork is set so that the "hang" is "just right."

It will screen dirt from vegetables without bruising them; handle corn without sticking into the cobs; pitch fine manure better than a manure fork or shovel, and screen coal or lime.

...THREE OF OUR LEADERS...

SUGAR BEET FORK.

Made especially to meet the demand of the beet sugar makers for a fork with ball end tines of the proper size for their work. Made from one solid piece of cast steel The ends of the tines are drop forged to form the balls. Seven tines 14 inches long and spaced 1¾ inches apart. Width of fork 14 inches at head and 16 inches at points Fitted with 36-inch iron D handles with wide strap ferrules.

A GOOD GENERAL PURPOSE FORK.

WE MAKE A COMPLETE LINE OF FORKS AND RAKES FOR ALL PURPOSES.

COKE FORK.

With heavy strap ferrules, made from one piece of sheet steel.

30-inch handles with rivetted wood "D"

CHANDLER'S ICE CUTTING MACHINES.

NO CHILLED HANDS.

The Labor of Preparing Iced Drinks Changed to a Pleasure.

INDISPENSABLE FOR FAMILY USE.

A small, compact, simple, strong and cheap machine, which cuts the ice into small diamond shaped pieces with the utmost ease and rapidity. Can be attached by screws to any table, counter or shelf, and occupies a space only eight inches square.

For Iced Tea or Coffee or Ice Cream It Has No Equal.

Made in five sizes: No. 1. for Bar Tops and Soda Counters; No. 2. for family and universal use; No 2½ for Hotels, Hospitals and Boarding Houses; No. 3. for large Hotels, Confectioners, etc.

No. 1,	-	3.50
No. 2,	-	5.00
No. 2½.	-	8.00
No. 3,	-	20.00

Special attention is called to the two largest sizes, No 2½ and No. 3 designed for Hotels, Confectioners, Hospitals and other institutions, where crushed ice is used in quantities for table, ice cream, or other purposes.

The No. 2½ stands eighteen inches high, occupying a space eight by eleven inches, weighs about 25 lbs., and will take in a piece of ice weighing 12 lbs

The No 3 stands two feet high, occupying a space fifteen inches square, weighs about 85 lbs, and will take in a cake of ice weighing 25 lbs.

C. E. JENNINGS & CO.,

101 Reade Street, NEW YORK, U. S. A.

The Ideal Steam Cooker

COOKS A WHOLE MEAL OVER ONE BURNER

On Gasoline, Oil, Gas or Common Cook Stove. **Will reduce fuel bills 50 per cent.** The steam whistle blows when Cooker needs more water. **No steam in the house.** No offensive odors Burning, scorching or overcooking impossible Vegetables that always lose much of their flavor and become watery, soggy and indigestible by boiling, are made dry, light and healthful.

Meats and poultry no matter how tough, are made tender and palatable

Will hold 12 one-quart glass jars in Canning Fruit.

THE HOUSEKEEPER'S FRIEND.

We also manufacture a full line of Milk Sterilizers, Clothes and Hat Racks and **Vapor Bath Cabinets.**

THE PAN AMERICAN EXPOSITION, 1901

PLAN OF THE EXPOSITION.

BUFFALO ARRANGING A MAGNIFICENT DISPLAY FOR THE YEAR 1901. THE WONDERS OF PAN-AMERICA TO HAVE AN ARTISTIC SETTING. ELABORATE FLORAL, HORTICULTURAL AND ELECTRICAL FEATURES. EXTERIOR VIEWS OF THE EXPOSITION

The hand of the artist has labored without restraint in arranging the grounds and grouping the buildings for the great Pan-American Exposition, to be held at Buffalo in 1901. The plan has been completed after protracted and painstaking study of the grounds and their surroundings, and with a keen appreciation of all the requirements of an exposition upon the scale of magnificence here contemplated. The completed work will be a masterpiece, in which the designer of buildings and the landscape architect will alike share the honors. American architectural genius has indeed here produced glorious results. If one were to see only the exterior of this splendid exposition he will find himself abundantly repaid for his visit to Buffalo in the Pan-American year.

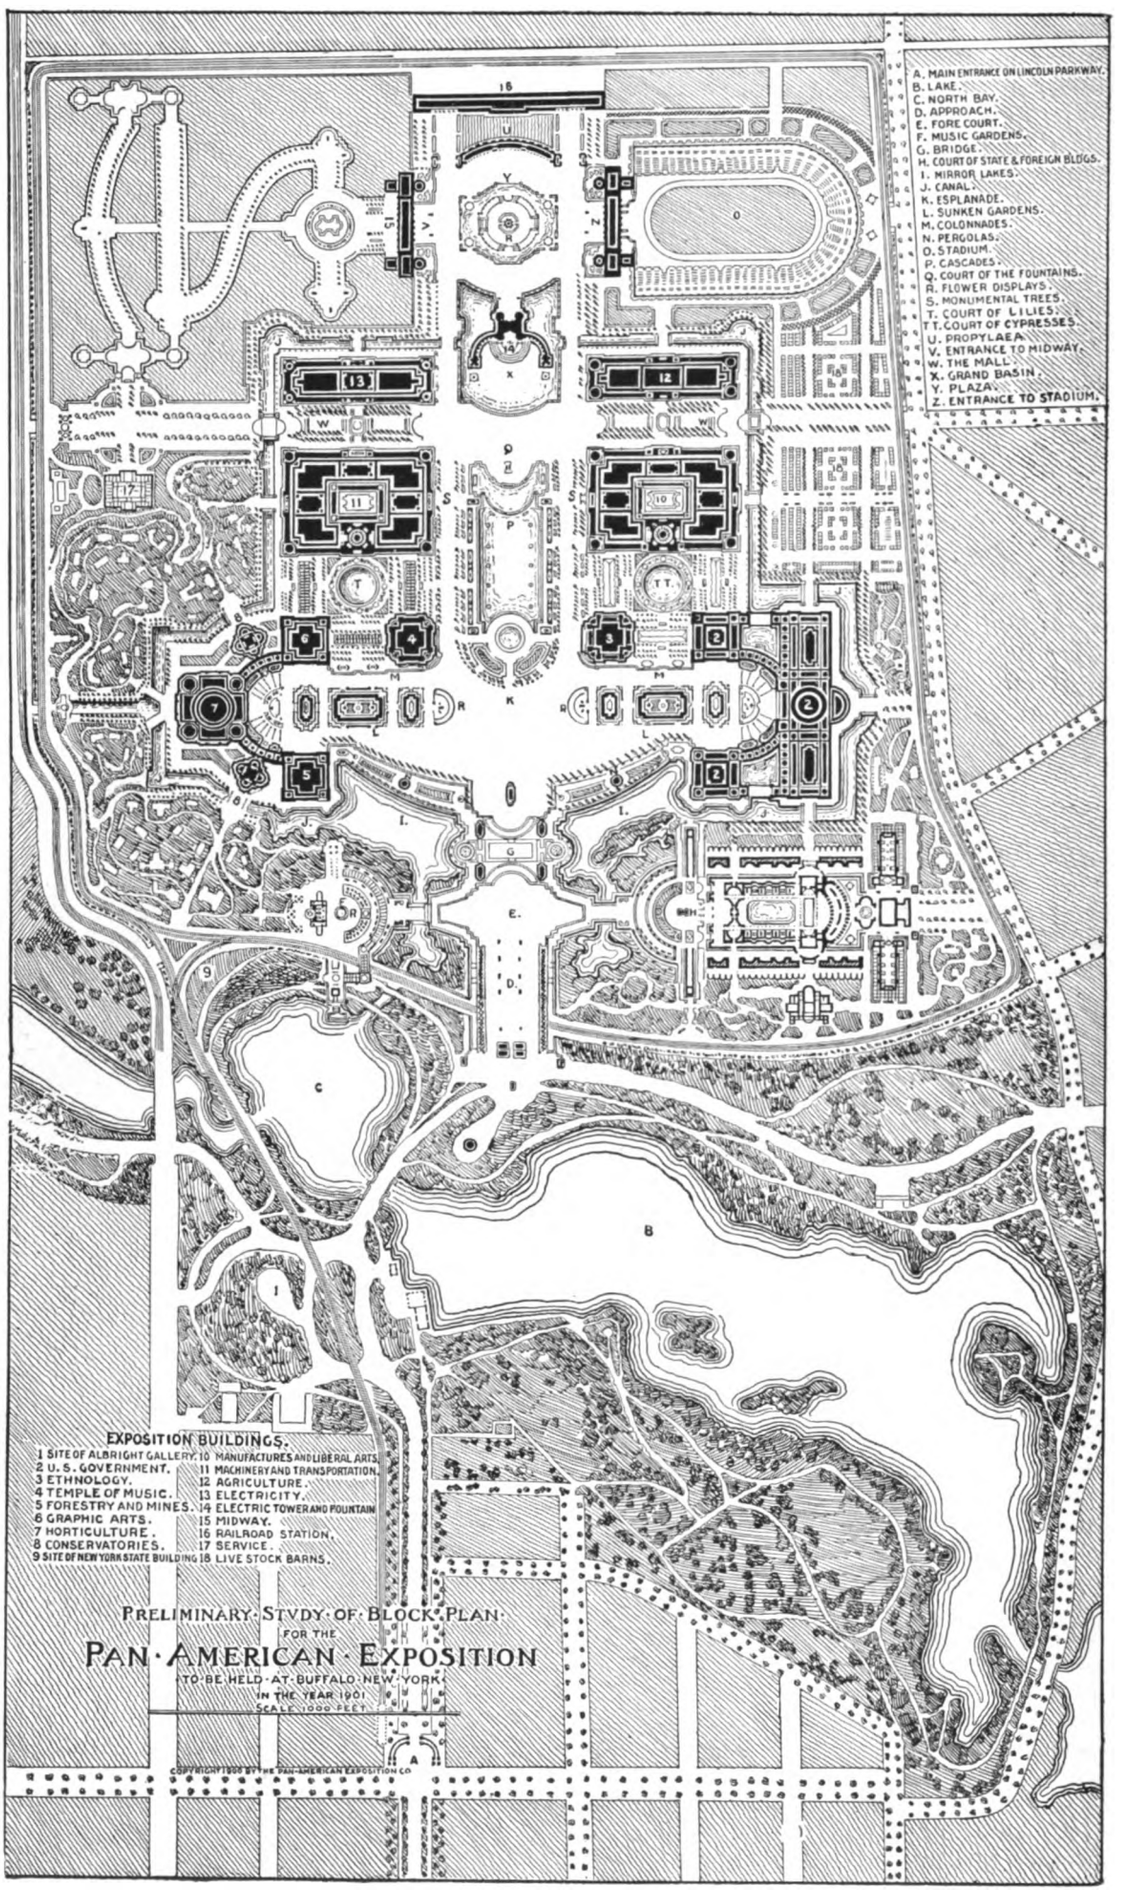
The Exposition grounds include 350 acres, of which 133 acres are improved park lands, a part of Delaware Park. The grounds are about one mile from north to south and a half mile from east to west. Their situation is in the northern part of the city, accessible from every direction. The park lands form the southern part of the extensive grounds, and are pronounced by expert landscape architects to be among the most beautiful in the world. The trees and shrubbery in wonderful variety, the romantic footpaths leading in all directions among the thick foliage, the loveliest of lakes, on whose surface numberless swans and other water fowl of immaculate plumage are constantly at sport, the wide reaches of lawn and the rich embroidery of flowers, everywhere to be seen, all combine to refresh and restore the mind of him who tarries within these delectable precincts.

The visitor who approaches the Exposition from the south will enter the grounds on Lincoln Parkway, a broad, beautiful, shaded boulevard. Once inside the gates, the station of the intramural railway which encircles the grounds, is at its left. But the walk is quite as tempting to the sightseer. Nature has been assisted with consummate skill by the landscape architect, and here she presents her varied colors with the grace and refinement that years of culture have given her. Presently, the views widen and the water scenes meet the eye. On the right is the refectory. The lake is dotted with boats. On the left is the Albright Art Gallery (Fig. 1 on the diagram), presented by a Buffalo citizen, who has taken this opportune time to make the city a magnificent gift. It is a permanent building, the home of Buffalo's best public art treasures, and serving the purpose as the Art Building for the Exposition.

The sightseer now crosses a bridge that spans a narrow channel between the lake (B) and the North Bay (C). He is already obtaining glimpses of the stately buildings that rear their domes and pinnacles far above the surrounding objects. But, taking the objects of interest as they come —a winding path leads around the shore of the North Bay to the permanent building erected by the State of New York (9) in conjunction with the Exposition Directorate. It is to be the permanent home of the extensive, valuable and interesting collection of the Buffalo Historical Society. Rather than cross the intramural railway tracks on the small bridge in the Music Gardens (F), it is best to retrace one's steps to the Approach (D). Here it is well to remain a few moments to examine the marvelous and exquisite panorama somewhat in its details. It is a picture to be seen but once in a lifetime, and always thereafter remembered with supreme satisfaction. Words are indeed but weak symbols in the presence of such surpassing magnificence. The majestic and lofty proportions of the great architectural creation forming the main group of Exposition buildings must deeply impress any visitor who stops to drink from this exhaustless fount of beauty.

As one comes to the Fore Court (E), the view still broadens. The buildings seem more lofty. Their rich coloring and elaborate decoration begin to touch the vision with their attractive lines.

Directly east of the Fore Court is the great Court of the State and Foreign Buildings (H). This extensive group in itself constitutes an exposition where much time may be profitably spent. The court is about 1000 feet long and contains many buildings representing the leading States and nations of the Three Americas. The variety of architecture supplies a subject for study and pleasurable contemplation. The Music Gardens are directly west of the Fore Court, and will enable large assemblages to enjoy the many fine concerts to be given there.



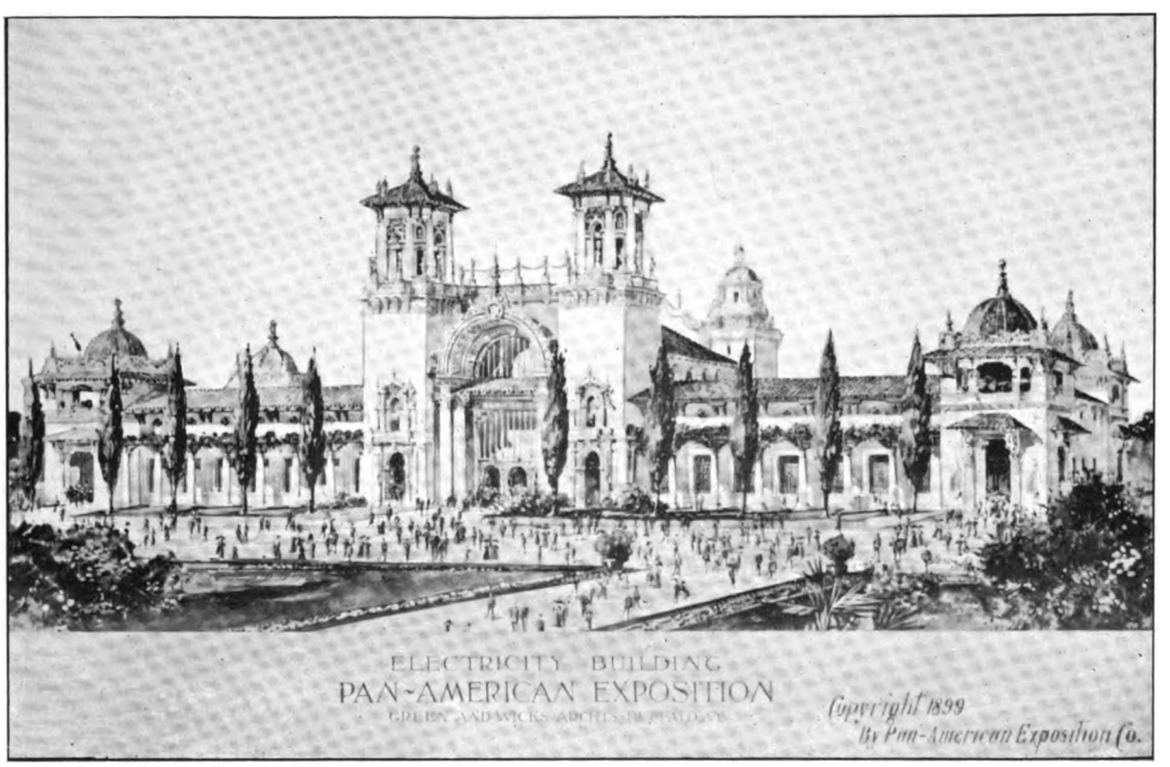
Leaving the deep green foliage the visitor now crosses the Triumphal Bridge (G) to the Esplanade (K). In this broad open space there is room for an assemblage of 250,000 people. This will be the scene of special celebrations and notable ceremonies during the continuance of the Exposition.

The visitor is now fairly within the Grand Court formed by the main group of Exposition buildings. The court is of the shape of an inverted T. The Approach, Fore Court and Bridge are about 1000 feet in length, 300 feet wide. The Main Court is 2000 feet long, 500 feet wide, and the transverse court, across the Esplanade, is 1700 feet from east to west. On either side of the Triumphal Bridge are the Mirror Lakes (I-I). These are a part of the grand canal which completely encircles the great group of buildings, and upon which the visitor may ride in one of the many electric launches or take a more leisurely trip in a Venetian gondola. The canal is lined with young trees and banked with grass on its outer edge. Picturesque bridges cross it at many points.

Standing on the Esplanade and facing north the great group of buildings at the right, at the extreme east end of the transverse court, are those of the Federal Government (2-2-2). The main building, in which will be sheltered a greater portion of the Government exhibits, is 600 feet long by 130 feet wide. A central dome rises to a height of 250 feet above the main floor, and is surmounted by a statue of Victory, 20 feet high. The lesser buildings, each 150 feet square, are west of the main building 150 feet on the north and south lines of the main structure. Curved colonnades connect the smaller buildings with the greater, forming a spacious semi-circular court opening to the west. The Government exhibits will include the aquariums and ichthyological collection of the United States Fish Commission and extensive collective exhibits from the Philippines, Puerto Rico and Hawaii.

At the far western end of the broad transverse court is the Horticultural Building (7), 220 feet square, flanked on the north by the Graphic Arts Building (6) and on the south by the Forestry and Mines Building (5). They are

Digitized by Google



PLAN OF THE BLOCK SYSTEM OF LAYING OUT GROUNDS ETC.

Digitized by Google

connected by circular arcades, forming a broad court similar to that enclosed by the Government group. Behind the arcades are the conservatories. The Esplanade is made beautiful with fountains, sunken gardens, pergolas and colonnades.

Immediately north of the Esplanade is the Court of the Fountains (Q). At the right is the Ethnological Building (3) and at the left the Music Building (4), each 150 feet square. The Court of the Fountains is to be the great center-piece of the Exposition. Here the principal electrical displays are to take place. The Court is to be illuminated at night with the diffused light of more than 100,000 incandescent electric lamps, the distribution being so perfect that there will be no shadows. Colors will be extensively employed to produce fantastic effects. The huge steel tower (14), 350 feet high, which stands at the north end of the Court of the Fountains, will be used in the production of extraordinary electric features. One of these will be an electric waterfall, 30 feet wide and of 70 feet

ELECTRICITY BUILDING PAN-AMERICAN EXPOSITION.

descent, from a niche in the tower. The tower itself is of imposing design and intricate workmanship. The many fountains in the great basin of the court will be made beautiful at night by means of electric lights of all colors.

The very extraordinary electrical features of the Exposition are made possible by the fact that electric power from the largest power plant in the world, at Niagara Falls, is to be provided in unlimited quantities. This power plant is only half an hour's ride from Buffalo, and is one of the great sights for visitors to the Exposition to include in their itinerary.

Opposite the Court of the Fountains are the two big buildings of the Exposition, the Machinery and Transportation Building (11), on the west, and the Manufactures Building (10), on the east. These are each 500 by 350 feet, and each has a beautiful tropical court with an aquatic pool in the center.

The visitor, proceeding northward, now comes to the Mall, a broad street shaded with tall poplars. To the right is the big Agricultural Building (12), 500 by 150 feet, and to the left the Electricity Building (13), of the same general proportions. East of the Agricultural and Manufacturers Buildings are the Live Stock Exhibits (18). About ten acres are devoted to these. West of the Machinery and Transportation Building is the Service Building (17), the headquarters for all the Exposition officers and departments of public service that are required on the grounds.

The massive steel tower (14) already mentioned divides the Court of the Fountains from the Plaza. It stands in a large aquatic basin, and a picturesque bridge enables the visitor to reach it from the Plaza. In the tower, at the height of 70 feet, is a large restaurant. There are promenade floors at various heights, and a balcony near the summit, from which a bird's-eye view of the Exposition, the City, Lake Erie, Niagara River and the open country may be obtained. All the floors are reached by means of elevators.

The Plaza (Y) is 500 feet by 350 feet. Standing at the Tower Bridge, at the right, is the Stadium Building (Z), 341 feet long by 52 feet wide, with towers 164 feet high. This ornate building forms the entrance to the Athletic Field or Stadium (O), where 25,000 people may be seated to witness the high-class athletic contests to be provided. The Athletic Carnival of 1901 is intended to be the greatest ever given in America. The Stadium covers about ten acres, and resembles in a general way the one erected at Athens a few years ago. It contains a quarter-mile running track and ample space within for exhibitions of skill and feats of strength. The entrances are made large so as to admit floats, etc., as the Stadium is to be used for certain pageants, exhibits of automobiles in operation, the judging of live stock, agricultural and road machinery.

On the west side of the Plaza is a large Restaurant Building (V), of the same dimension as the Stadium entrance. This forms also the entrance to the Midway, to which twenty acres of space are devoted. The plan of the Midway is somewhat the form of an anchor with a serpentine street and an extra cross street. The large number of applications for space in the Midway has enabled the Director of Concessions to choose entertainments possessing exceptional novelty and merit.

At the north side of the Plaza is the Propylaea (U), consisting of two monumental entrances connected by a curved colonnade forming a highly ornamental screen and separating the railway station from the Exposition. It is at

Digitized by Google

this station that the steam railway trains from all parts of the country will discharge such of their passengers as desire to go direct to the Exposition. Electric cars will connect for all parts of the city.

Whether the Exposition is approached from the north or south the effect is impressive and awe-inspiring. The general style of the buildings is that of the Spanish Renaissance, modified to suit the character of an Exposition. There is a generous use of color, the red roofs and tinted walls giving the completed work a festival aspect. Domes, lanterns, pinnacles and statues, waving flags and streamers, make gay the sky line. The facades of the buildings are everywhere broken with elaborate architectural features, and arcaded effects are much used throughout the vast group. There are more than twenty large buildings and massive architectural works, besides the numerous State and Foreign Buildings, buildings for special exhibits, public comfort and other purposes. The extensive use of trees, shrubs, flowers and aquatic pools relieves the severity that is usually encountered in exposition groups.

The buildings will all be abundantly filled with the most curious and interesting exhibits, representing the latest and best achievements of the civilization of the Western Hemisphere. The profound educational value of the Pan-American Exposition at Buffalo in 1901 cannot be gainsaid.

ELECTRICITY BUILDING.

Elaborate designs have recently been completed for the Electricity Building for the Pan-American Exposition, to be held at Buffalo, N. Y., May 1 to October 31, 1901. Displays of all kinds in the practical and artistic uses of electricity, together with complete exhibits of electrical machinery and appliances are to be conspicuous features of the great Exposition.

The designs contemplate a very handsome and commodious building. The structure is to be 500 feet from east to west and 150 feet wide, giving an exhibition space of 75,000 square feet.

The south facade fronts the Mall and the north fronts the Midway. The east end is toward the massive Electric Tower, while the west end faces the Grand Canal. The building is long, low and inviting. The design of the facades shows artistic grouping. The openings of the pergola-like loggias, placed at frequent intervals, present a delightful effect, showing more and more of the reveals of the pilasters and openings as the eye travels to the end of the building farthest away from the observer.

There is a pleasing ending at each corner of the building, with a low-domed pavilion tower, and the building is interrupted at the center by the double-towered entrance. This entrance, wide and high, is spanned by an ornamental arch and supported each side by columns. The towers also have minor entrances through them.

The connecting work between the towers, the towers themselves, the pavilions at the corners of the buildings, and similar places, are to be brilliantly illuminated and made gay with banners and flags.

The modeled relief work of the building is of choicest design. The general ornamentation of the building is to be frescoes in an interesting mixture of reds, greens and yellows. The general color scheme follows that of the Machinery and Transportation Building and other groups of buildings of the Exposition. The building was designed by Green & Wicks, of Buffalo.

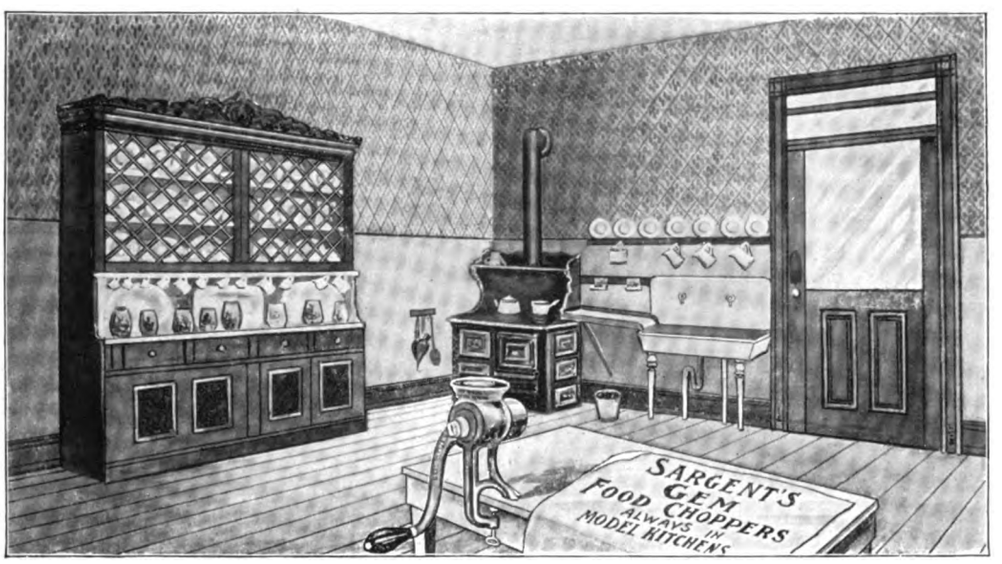
There were just enough eggs to go around, and the new boarder drew a bad one. He appealed to the landlady, who was a modern Mrs. Malaprop. "You should remember," she said philosphically, "that to the victim belongs the spoils."—*Philadelphia Record.*

The Girl—Did you wait long for a husband?
The Matron—No; but I do now.

Discovery of Acetylene.

In May, 1892, Mr. Thomas Willson, a Canadian electrician, it is stated in the *Popular Science Monthly*, tried to make the metal calcium in an electric furnace in his works at Spray, N. C., by heating a mixture of lime and coal dust. He thought that the lime (calcium oxide) would act on the coal (carbon) to form calcium and carbon monoxide. He did not succeed in getting calcium, but found in the furnace a brown, crystalline mass, which was decomposed by pouring water on it, yielding an inflammable gas. Willson is not a chemist, and he therefore sent specimens of the material to several men of science to determine its nature. It was shown to be calcium carbide, a compound of calcium and carbon, formed by the action of the carbon on calcium oxide. The gas formed by the action of water was acetylene, a compound of carbon and hydrogen. Calcium carbide and water form acetylene and lime. Neither calcium carbide nor acetylene was a new discovery; acetylene was discovered by Edmund Davy in 1836, and its properties were studied by Berthelot in 1862. Impure calcium carbide was first made in 1862 by Wohler, who described its decomposition by water into acetylene and lime. What was there new, then, in Willson's discovery? Two important facts: He was the first to make carbide by a method applicable commercially; he was the first to make crystalline carbide.

The statement is still current that acetylene attacks copper and brass, forming an explosive compound. This is not true Exhaustive experiments by Moissan and by Gerdes, keeping these and other metals in contact with acetylene for months at a time, have shown that the metals were not affected. The conditions under which the explosive copper acetylide is made in laboratories cannot well occur in generators or gas holders. It has been said that acetylene is very poisonous; the experiments of many observers, and especially those of Grehant, do not confirm this statement. Grehant experimented on dogs, causing them to breathe mixtures of acetylene, air and oxygen, which always contained 20 8 per cent. of oxygen, this being the percentage of oxygen in pure air. By this device he was able to discriminate between the poisoning caused by acetylene and suffocation caused by insufficient oxygen. A mixture containing 20 per cent. acetylene inhaled for thirty-five minutes did not seem to trouble the animal. A sample of the dog's arterial blood contained 10 per cent. of acetylene. A dog which inhaled a mixture containing 40 per cent. of acetylene died suddenly after fifty-one minutes, having inhaled 112 litres of the mixture; the arterial blood contained 20 per cent. acetylene. Grehant proved that acetylene simply dissolves in the blood plasma, while carbon monoxide forms a compound with the hæmoglobin of the blood. A dog breathing a similar mixture of air, oxygen and illuminating gas containing only 1 per cent. of carbon monoxide quickly showed convulsive movements, and died after ten minutes; its blood contained 24 per cent. of carbon monoxide. Thus acetylene, while slightly poisonous, is less poisonous than coal gas, and vastly less than water gas, which contains a high percentage of carbon monoxide.



Metal Walls and Ceilings.

Mr. Powell, the British consul at Philadelphia, reports that in consequence of the recent plasterers' strike in Great Britain, the export of metal walls and ceilings has been strongly suggested. The idea of these metal fronts to houses is that it does away in a great measure with plaster, and in the case of ceilings removes the unsightly crackings and damp stains which so often appear. The plated ceilings, also, besides being extremely decorative, are a very great protection against fire —*American Exporter.*

A woman can buy an inferior article in groceries, because a better is too expensive, and keep her contentment, but she can't do it in a dry goods store.—*Ex.*

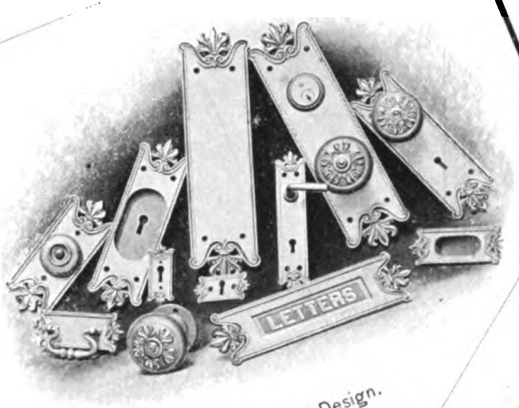
Here is an opportunity

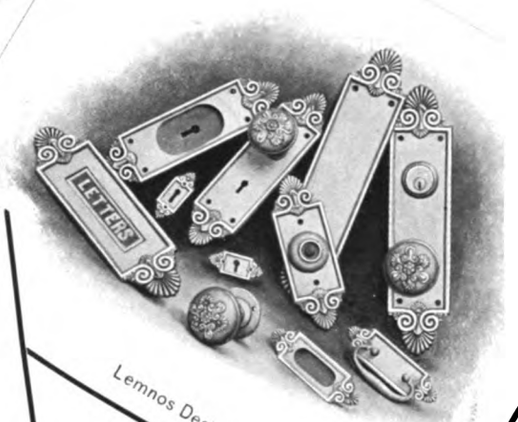
Every housekeeper in your vicinity needs in her kitchen Sargent's Gem Food Chopper. Hardware dealers should see that all are supplied.

How many weddings take place in your section every week? Sargent's Gem Food Chopper would be received with pleasure as a wedding gift by every bride; if not among the gifts it should be one of the first purchases of the happy pair. No home should be started without Sargent's Gem Food Chopper in the kitchen. You can add to your profitable sales by looking after this.



Sargent's Gem Food Chopper is a kitchen necessity. It takes the place of the chopping bowl and knife, lessens the drudgery of housework, saves time for the housekeeper and is an economical machine to have.

What it chops and how it chops is described below. It is useful in the preparation of the substantial dishes and the dainty desserts. Easy to take apart, easy to put together, easy to adjust, easy to clean. We will furnish hardware dealers with printed matter to help them sell Sargent's Gem Food Chopper, also electros for local paper advertising. Put it in your show window and call special attention to it; the result will please you.



You will be pleased with this Chopper—we are.

Bulis Design

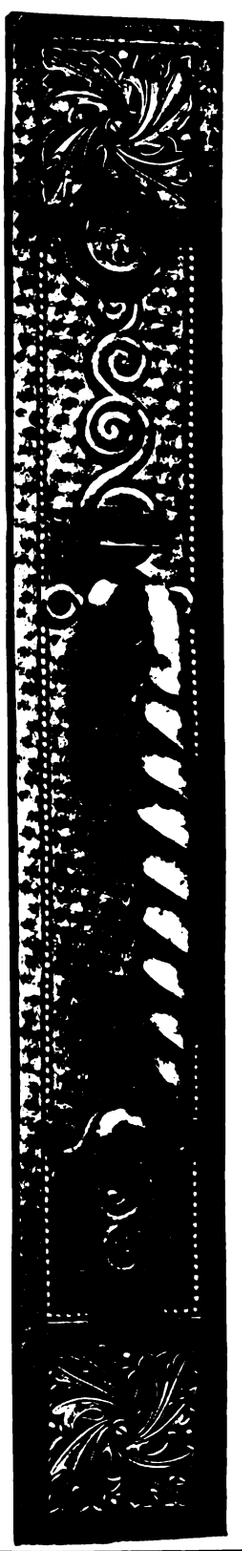
Revere Design.

Copley Design.

Verona Design.

A few of Sargent's Designs.

Digitized by Google



Notice on the preceding page a few groups of Hardware showing some of the Artistic Designs manufactured at our New Haven works.

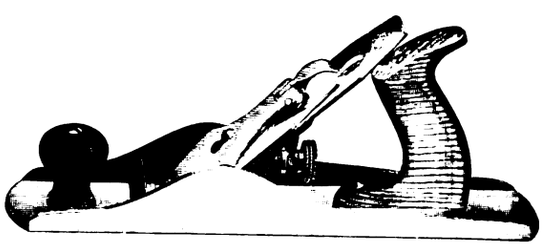
Hardware Dealers

should be especially interested in these fine goods because they afford a profit to the dealer, satisfy the user, and they are not extravagant in price.

Steer your customers away from the cheap competitive goods which have to be sold at competitive prices—you can do it—and call their attention to Sargent's Artistic Hardware, which can be sold at prices allowing a good profit for your trouble, and which will also prove satisfactory to your customers and be economical as well.

In "Our Little Red Book," which circulates largely among those who intend to build, we say: "The Hardware is but a very small item in the whole cost of a building, even if the very best is used; the difference in cost between good locks and poor locks is so little that an owner would not consider it a saving to use poor locks if the matter was brought to his attention." This matter should be brought to the attention of builders by the Hardwareman. It is important to the builder, and after the Hardware is on the building, if it is the satisfaction-giving kind, the dealer will be thanked for his advice. Some dealers attempt to substitute other makes for Sargent's, claiming that they are "just as good." That is poor business; your customer may buy the substitute goods, but there remains with him the feeling that you have taken advantage, and he always has an idea that the goods he purchased are not giving the same satisfaction as Sargent's.

Our Easy Spring Locks and Artistic Hardware have been advertised very extensively during recent years, and as a result builders have a more general knowledge of what is good in Hardware. Sargent's Hardware is favorably known; it gives satisfaction wherever used, and such satisfaction extends its popularity—a pleased customer is the best kind of an advertisement, and our advertising helps our customers as well as ourselves.



SARGENT & CO., Manufacturers,

New Haven, Conn. New York. Philadelphia. Boston.

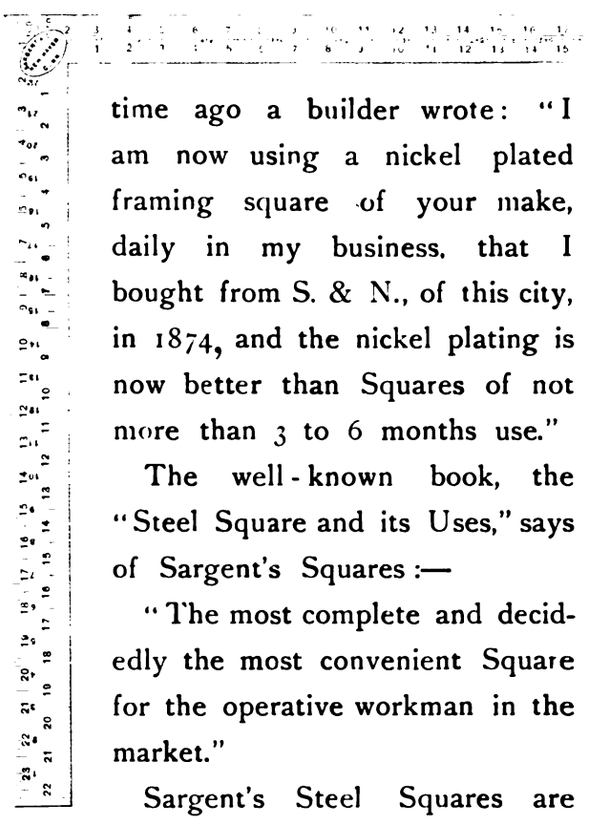
You can make sales

if you carry the right goods in stock, and Sargent's Planes, with our strong warranty back of them are the right planes.

When the mechanic is making his selection there are a number of points that count in favor of Sargent's Iron and Wood Bottom Planes.

Only the best materials are used in their manufacture; they are thoroughly made, carefully put together and handsomely finished. They are mechanically perfect, fitted with improved adjustments and the cutting irons are tempered just right.

They stand the test



of daily use on the work-bench.

We warrant every Plane and dealers are authorized to warrant them to their customers.

We have a little booklet on which we will print your name and furnish you with a quantity for distribution among the mechanics of your section.

Do you sell tools?

We make more than planes. Sargent's Steel Squares have been used by the best mechanics for years. We do not solicit testimonials but only a short

time ago a builder wrote: "I am now using a nickel plated framing square of your make, daily in my business, that I bought from S. & N., of this city, in 1874, and the nickel plating is now better than Squares of not more than 3 to 6 months use."

The well-known book, the "Steel Square and its Uses," says of Sargent's Squares:—

"The most complete and decidedly the most convenient Square for the operative workman in the market."

Sargent's Steel Squares are good tools for hardware men to sell.

Mechanics like

Sargent's Screw Drivers because they are first-class in every respect. Several styles are made and of all sizes.

Other Sargent tools that are extensively used are Awls and Tools, Bench Hooks, Plumb Bobs, Pincers, Vises, Saws, Chisels, Augers and Bits.

Sargent's tools are good sellers.

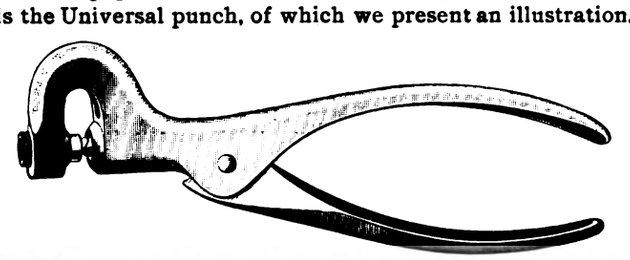
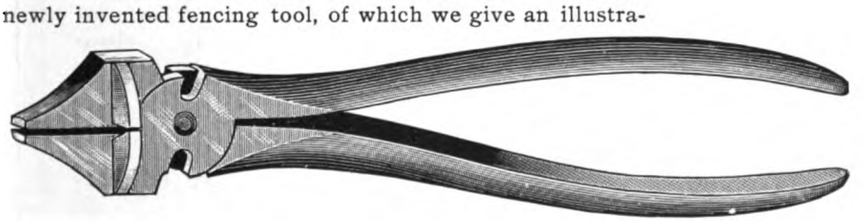
THE NEW YORK PUBLIC LIBRARY



SOME POPULAR SPECIALTIES.

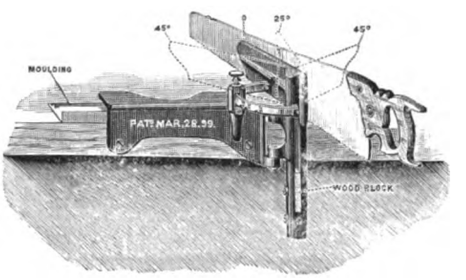
Charles Morrill's Tools.

The attention of our readers is called to the line of special tools manufactured in the works of Charles Morrill, which is to be found on page 86 of the present number of *Hardware*. Prominent among these productions of his inventive ability will be found the Perfect Saw Set No. 95,



which we illustrate herewith, and which has been well named the "Morrill Masterpiece." This perfect tool has even from its earliest creation been popular with the Hardware trade, so that now with the many patented improvements of recent years it is acknowledged as a truly scientific saw set. It will be noticed the revolving anvil has an indicator so subdivided and marked with figures, that the number of teeth to the inch the adjustment will set is readily shown; for example: if the saw has four teeth to the inch, the anvil need only be turned until the figure 4 is opposite the plunger to make its work effective, and other dimensions of teeth are acted upon in a similar manner. Another popular tool of the "Morrill" degree of excellence, is the Universal punch, of which we present an illustration.

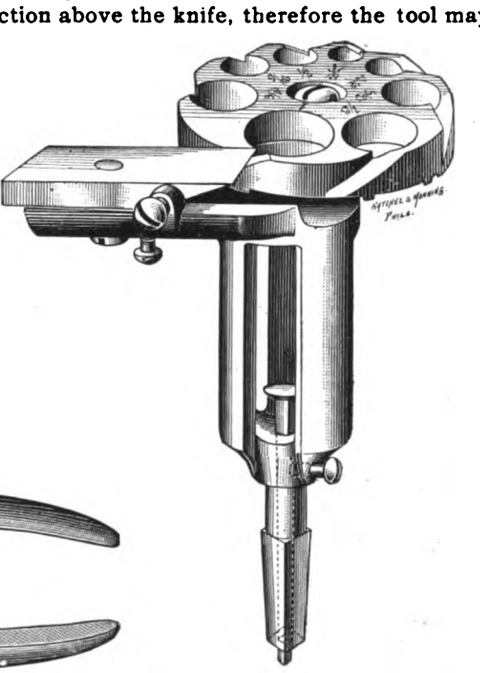
This is a convenient and powerful tool, suitable for the office or factory, and capable of good work. This punch is constructed on a principle in mechanism new to tools of this kind, utilizing a cam and lever; no great strength is required to operate it in comparison with many other punches. It will perforate readily (with a slight grip of the hand) any thickness of material from tissue to one-quarter of an inch of leather, rubber, paper, pasteboard, cloth, celluloid, veneering and other pliable substances. The sample and salesroom of Charles Morrill is at No. 35 Warren Street, New York.



Cronk's Combination Fencing Plier.

Cronk Hanger Co., Elmira, N. Y., are placing upon the market through the Hardware and implement trade the newly invented fencing tool, of which we give an illustration. Its peculiar form of construction provides it with two staple pullers, two hammers and two Button cutters, a complete outfit for the purpose of removing or repairing wire fence. They are made from forged tool steel and are no heavier than a Maydole hammer of the popular size. They are a very useful tool for the purposes indicated and fully warranted by the makers.

Seavey's Mitre Box and Saw Guide.



For years there has been a call for a small, light, compact and practical mitre box, one that a carpenter could carry with him as he does his other tools. This demand now seems to be supplied by the Smith & Hemenway Co., of

No. 296 Broadway, New York, who are selling the Seavey's Patent Mitre Box and Saw Guide. This little box, when folded, is 8 inches long, 3 inches wide and 7 inches deep; is made wholly of iron and steel, and weighs but two pounds, and retails at only $2.00. This box can be screwed to bench or held by hand, and is the only box made to be used on top of material. It is accurate, easily adjusted, and can be set at any angle. Will saw any width or depth, and no special saw is required; an ordinary cross-cut saw may be used. Finished in Japan, bright parts nickeled, made in one size only, which fills all requirements.

Bonney Hollow Auger.

The Bonney Vise & Tool Works, No. 3015 Chestnut Street, Philadelphia, are placing on the market the improved Hollow Auger shown in the accompanying illustration. It is claimed to cut freer, faster and cleaner than any old style auger, and may be changed from one size to another with great rapidity. It will be noticed there is no projection above the knife, therefore the tool may be used

to cut any size of work, and even offset tenants may be cut with it as readily as those cut in the center. The knife is made extra heavy in order to prevent any possibility of its springing; and as the body is a steel casting, it entirely precludes any liability to breakage. The shanks are made small to fit any size of bit brace. The plate is made thick, forming a better guide for the tenant, thus enabling an

Digitized by Google

operator to turn a tenant accurately true. The stop is of improved design, to allow of more perfect adjustment, and enable the auger to turn a larger tenant. The improvements in the tool have been patented by the makers.

Old-Time Machine Tools.

A view of a good machine shop of fifty years ago would show us no machine tools of importance, except lathes, planers, and drill presses. Many of these lathes were of the old weighted carriage pattern. They were provided with a power feed for the carriage only, but not for the cross-slide. This feeding was often done with a rough endless chain, but sometimes by a screw which also answered for chasing threads, thereby making it very inaccurate for the latter purpose after being somewhat worn by constant use in ordinary turning, especially in the particular spots which happened to be used the most.

The spindles of these lathes were very small, compared with modern practice; but they will probably seem still smaller a dozen or two years hence, when we shall, doubtless, have become sufficiently educated to use much larger diameters than now. The cross-slides were narrow, short, and lightly built, thus making a very springy relationship between the tool and the work. This involuntary elasticity, so to speak, was aggravated by lightly built carriages with short bearing surfaces upon the "vees" of the bed. The vees themselves were so low and narrow as to wear rapidly, the carriage thus scooping a hollow place at the part of the bed most used, and in the case of nearly all lathes, with short work being performed most frequently, the outer end of the bed often was comparatively unworn. The bed itself was always built as lightly as possible, with an elaborate ribbed construction which seemed entirely unfitted to withstand the vibratory stresses brought upon it while performing its natural functions.

The planers of that ancient day suffered from the same faults, in general, as did the lathes, except that there was no question of inaccurate thread chasing, nor any chance for making an important work-supporting member abnormally light, as is so easily done in the case of lathe spindles. Those planers, however, appeared to be framed as flimsily as possible all over, the saving of cast iron seeming to be the primary object in the minds of the designers.

The drilling machines of those days were also extremely crude. When not attached to a shaky wooden ceiling or wall, with the work lying on the floor, they often consisted of an independent machine, made with two wooden or iron columns having the drill-spindle between them, fed by a slippery hand-wheel directly surrounding the spindle. This moved with deliberate reluctance, so much so that it sometimes took nearly as long to return the clumsy structure to its upper position, carrying the weight of an unbalanced spindle for a burden, as it did to force the drill down into the work.—Oberlin Smith *in Cassier's Magazine.*

Evolution of the Machine Tool.

The machine tool has come along on the line of evolution. It has kept in touch with the conditions that made it a necessity. All industries that have got beyond the original and crude stage have contributed to the demand for some special form of machine tool. Professor Sellers, of the Franklin Institute, in an able review of the progress made in the mechanical arts in the nineteenth century, traces some of the causes leading thereto. He says the advent of the locomotive was a powerful incentive to mechanics, and, as railroad enterprise followed as a logical sequence, the labor saving tool became a necessity to the engineer, and to the great iron and steel plants supplying rails, bridges, etc. It was the same in such industries as iron shipbuilding, bridge and structural work. The early machine tools, says the Professor, were of the crudest workmanship, and most lathes, etc., were made of wood, the transition from wood to iron in the construction of machinery being made in the early part of the nineteenth century. England gave us the first good machine tools, and to that country we owe much of value, not only in the direction of self-acting tools, but in the various appliances for improving the character and quality of the work to be accomplished. In the planing machine, in cylinder borers for pumping engines, in slotters, lathes and so on to the end of the catalogue, American genius, while originating new types, has also built up a reputation in improving on older forms. At the Centennial Exposition in 1876, the display of American-made tools was a surprise to foreign experts. Tools for working wood, iron and stone, were in strong evidence, and, in commenting thereon, a keen observer noted their variety and excellence, and in commenting on the same, said in his report, that it was a matter of vast import that tools should have such a hold on the American mind, the influence of which would be felt in the civilization of the Western world for ages to come, but would have a powerful bearing on other countries as well. The key to our industrial destiny as a machine-making and a machine-using people can be found in this prophecy. If 1876 had the honor of such a good showing the Paris exhibit of American machine tools ought to be one of the surprises of 1900. The progress made since the earlier date has been by rapid strides. This is true in all kinds of industrial implements, no matter in whatsoever industry they are used. One has but to look through the catalogues of our machine-tool builders to be satisfied beyond a doubt in this matter, and here lies one of the potential secrets of American productive capacity, and the augury of its industrial leadership of the world.

Work Done By Air.

Pneumatic tools have become established as the most suitable for ship, engine and boiler work, bridge and car building, stone and other heavy work requiring considerable hand labor, and along these lines electricity, the only other rival power, has not proved a serious competitor. The pneumatic plant at the Newport News shipyard is the largest and finest in the world, and the Cramps, of Philadelphia, after experiments extending over several years, have decided to put in an immense equipment of pneumatic tools, while most of the other local shipbuilders have come to recognize their advantages. One great advantage of pneumatic tools is that unskilled labor can be employed where heretofore only skilled labor, receiving almost double the pay, has been necessary, and yet, the unskilled laborer with pneumatic tools can, on an average turn out three times as much work in the same time as the most skilled workman under the old method. This applies particularly to riveting, calking, drilling, etc. The rapidity with which air-driven tools work, and the ease with which they can be used in nooks and corners, render them preferable to electric or hydraulic tools.

The latest application of pneumatic power to iron work is the continuous pneumatic forge. This tool is a self-feeding forge for heating rivets, and employs fuel oil as the heating medium, compressed air being employed in an air-blast for the oil-heated furnace. There is a hopper which holds a keg of rivets, and means whereby the rivets are fed automatically into the heating chamber, where they are brought to the proper temperature by means of the combined air and oil blast. This arrangement enables from half a dozen to a dozen rivets to be kept at the proper riveting temperature all the time, doing away with the necessity of a heater boy. The air-blast is capable of regulation so that the rivets can be brought to the proper temperature without burning and at the proper number per minute delivered to suit the requirements of the operator. As one rivet is removed another falls down from the hopper and is gradually brought up to the riveting temperature. Provision is also made for using different sized rivets.

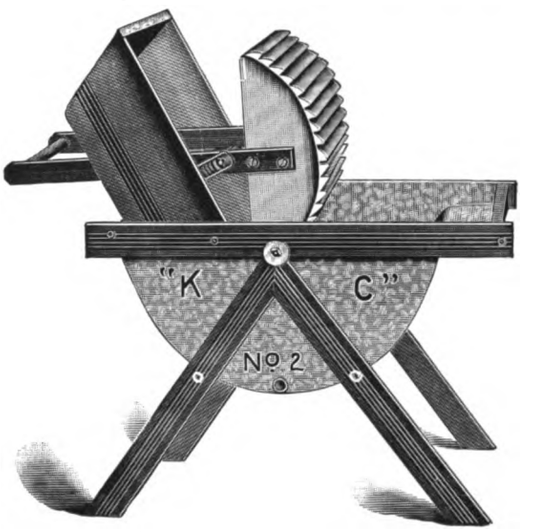
A FEW HOUSEHOLD SPECIALTIES.

Wagner Ball Bearing Wafer Iron.

The Wagner Mfg. Co., Sidney, Ohio, are distributing through the Hardware and house furnishing trade the newly improved Wafer Iron. which we show here an illustration of. They are made on the same principle as their waffle iron, the popularity of which is acknowledged by the

trade. The ball-bearing feature, entirely original in the Wagner wafer and waffle irons, permits the separation of the pans at the hinge, and allows of their being revolved on a gasoline stove. These irons are very simple in construction, and are claimed from their ease in operation to bake to perfection the many varieties of thin wafers now so popular at fashionable luncheons, etc. They can be furnished the trade equipped either with wood handles or long steel handles as may be required.

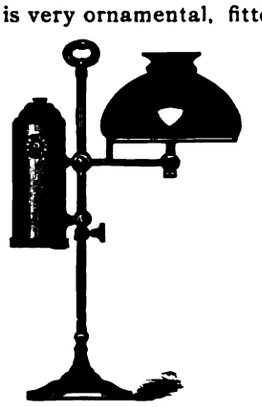
Crown and Anchor Shaving Set.



Smith & Hemenway Co., No. 296 Broadway, New York, have found an extended sale for the Crown and Anchor shaving set for travelers' or home use, as here illustrated. A number of styles can be furnished, varying in prices from 90 cents a set upwards according to the character of the box and grade of its contents. Some of the cases are of

leatherette, lined with silk satin or cotton satin. The frames of the higher-priced boxes are made of wood and are of a substantial character. The set shown is No. 887, moderately priced, containing one genuine John Engstrom's Swedish razor, a horsehide swing strop with hose back, decorated china mug, block of fine magnesia, cake of perfumed shaving soap, together with a stick of French cosmetic and full-size white bristle brush.

Kansas City Washer.



Rath Mfg. Co., Kansas City, Mo., are producing the K. C. Washer No. 2, as illustrated herewith. It is a covered machine, having as a special feature a 9-inch compression coiled spring incased in retinned spring carriers

on either side of the machine. Another essential feature of the machine is a galvanized iron corrugated bottom, having corrugations throughout the semicircular bottom. The corrugations have ⅞ inch centers, about ½ inch high. The bottom, sides, etc., are said to be made of the best Apollo galvanized iron, and one of the points to which attention is called by the company, is that there are no cracks nor crevices in its construction to accumulate dirt and filth.

The Bundy Acetylene Gas Student Lamp.

Among the different acetylene gas lamp manufacturers in this country, for manufacturing all styles of lamps, the Frank E. Bundy Lamp & Sundry Co., of Elmira, N. Y., is noted. This concern besides making bicycle lamps, carriage lamps and lanterns, has perfected a table lamp of the student's type, and we herewith give illustration of this lamp. It is built throughout of brass, highly finished and nickel plated and is very ornamental, fitted with a white

opal shade. The capacity of this lamp is from six to eight hours. The charge used in this lamp is from one-half to three-quarters of a pound of carbide and about one pint of water at the discretion of the user. It gives a very strong and powerful light, and has been tested when burning full to give a candle power of 56. However, under ordinary pressure, the candle power is figured at about 30. As acetylene gas is becoming known throughout the country there is no doubt but what it will be used very extensively in the near future It has a great many features which

Digitized by Google

cannot be obtained from other forms of illuminants, one more especially being heat. The heat from this gas is only about one-half that is received from the ordinary illuminating gas in proportion to the light you get. The light is perfectly white and is the next known light to sunlight. It is claimed to be not injurious to the eyes and colors may be distinguished with it as well as in daylight. Calcium carbide can be procured in almost every establishment and this lamp is made to burn regular commercial size.

Picking Locks

The locksmith can open anything from oysters to a jack pot.

"The largest key in the city so far as I am able to tell," said an old locksmith recently, "is at the United States Arsenal (Augusta, Me..) and it is the key to the powder magazine. It is about a foot long, and of immense proportions in other ways. One can put his hand through the handle easily. The lock which it fits turns so hard that a stick has to be used as a lever to turn it. The lock is on wood of an immense oak door and is of the old-fashioned variety."

A very curious trade is that of locksmith. It is a trade that few others know and at the same time when one is thinking of it or sees the signs he thinks little of it beyond that of the machinist. A locksmith is a machinist, though all machinists are not locksmiths. This particular one learned his trade of a Scotchman years ago, and discoursed as follows:

"Times have changed in the way of locks. We read of the days when the key to Jerusalem required three men to carry it. In those days the safety depended upon the size of the key, but to-day it is different. Now it is the complication of the lock and not its size that is looked at. The little Yale lock would have been just such a good thing in those days as it is now."

"Is the locksmith's trade what it used to be?" he was asked.

"It has changed greatly. When I first entered business we had the large keys almost entirely to work with. To-day they are small. Now the great part of our work consists in making duplicate keys. And in that too we have to face the competition of manufacturers. In this as in all other business there has been a change.

"Every lock manufacturer in sending out his locks sends along some duplicate keys. Even after a man loses a few of them, he can go to the Hardware dealer and get a duplicate or one can be secured for him of the manufacturer by sending the number. All these great lock manufacturers keep duplicates so that they can accommodate the lock in case the keys are lost. The number of the lock can be sent in and a key will be sent that will fit it. They have a grand system."

"But do the companies have more than one lock of a certain number?" he was asked.

"Oh, yes, I suppose they do, but they are careful where they send the locks. If No. A11231 is sent to Maine, they are careful to send the others to England, Mexico or some other remote place. They are so widely scattered that no one would ever once in a million times without knowing where to look, find duplicates after they left the factory.

"We have a great deal to do in the way of making duplicate keys now as the night latches are usually supplied with several for the family in case they are not supplied by the Hardware dealer. Some locks have but two keys accompanying them and it is as easy and as cheap to have us make one of them."

"What do people do who lose their keys and desire to have another?"

"We can take impressions of the lock and make one as well as not."

"Can you unlock a door that has one of the patent locks on it, without a key?"

"There is not a lock in this city that I cannot pick, if it is necessary. To do this a man must understand the mechanism of the lock. Even though you had the picks and were told what kind of a lock, with the number of tumblers in it, you could not pick the lock. One has to understand the workings of them. The other day a bank man came to me and said he had lost both the keys to a certain strong box and he did not know what to do. He asked if I thought I could pick it. I said I had little doubt but that I could. He remarked that the lock was warranted to be of the sort that could not be picked. He said he did not know but that he had better send for an expert, but he would let me try. I opened the box in just ten minutes after I started to work on it, greatly to the man's surprise. There is nothing in the way of locks that cannot be picked, I care not what they are. The only thing that cannot be picked is a combination lock such as are on the safes. If a man does not know the combination they cannot be opened without destroying the lock. When we locksmiths go to clean a safe lock we study the weak points. Then if we are called upon to enter it, we know just how to work to destroy the weakest places.

"The men owning the large vaults and safes have the combinations and locks cleaned every two or three years and many of them have the combination changed as often as that. We are the ones who do this, and thus we carry the greater number of combinations. That is a part disagreeable to the average locksmith, but it shows that our profession must be made up of honest men."

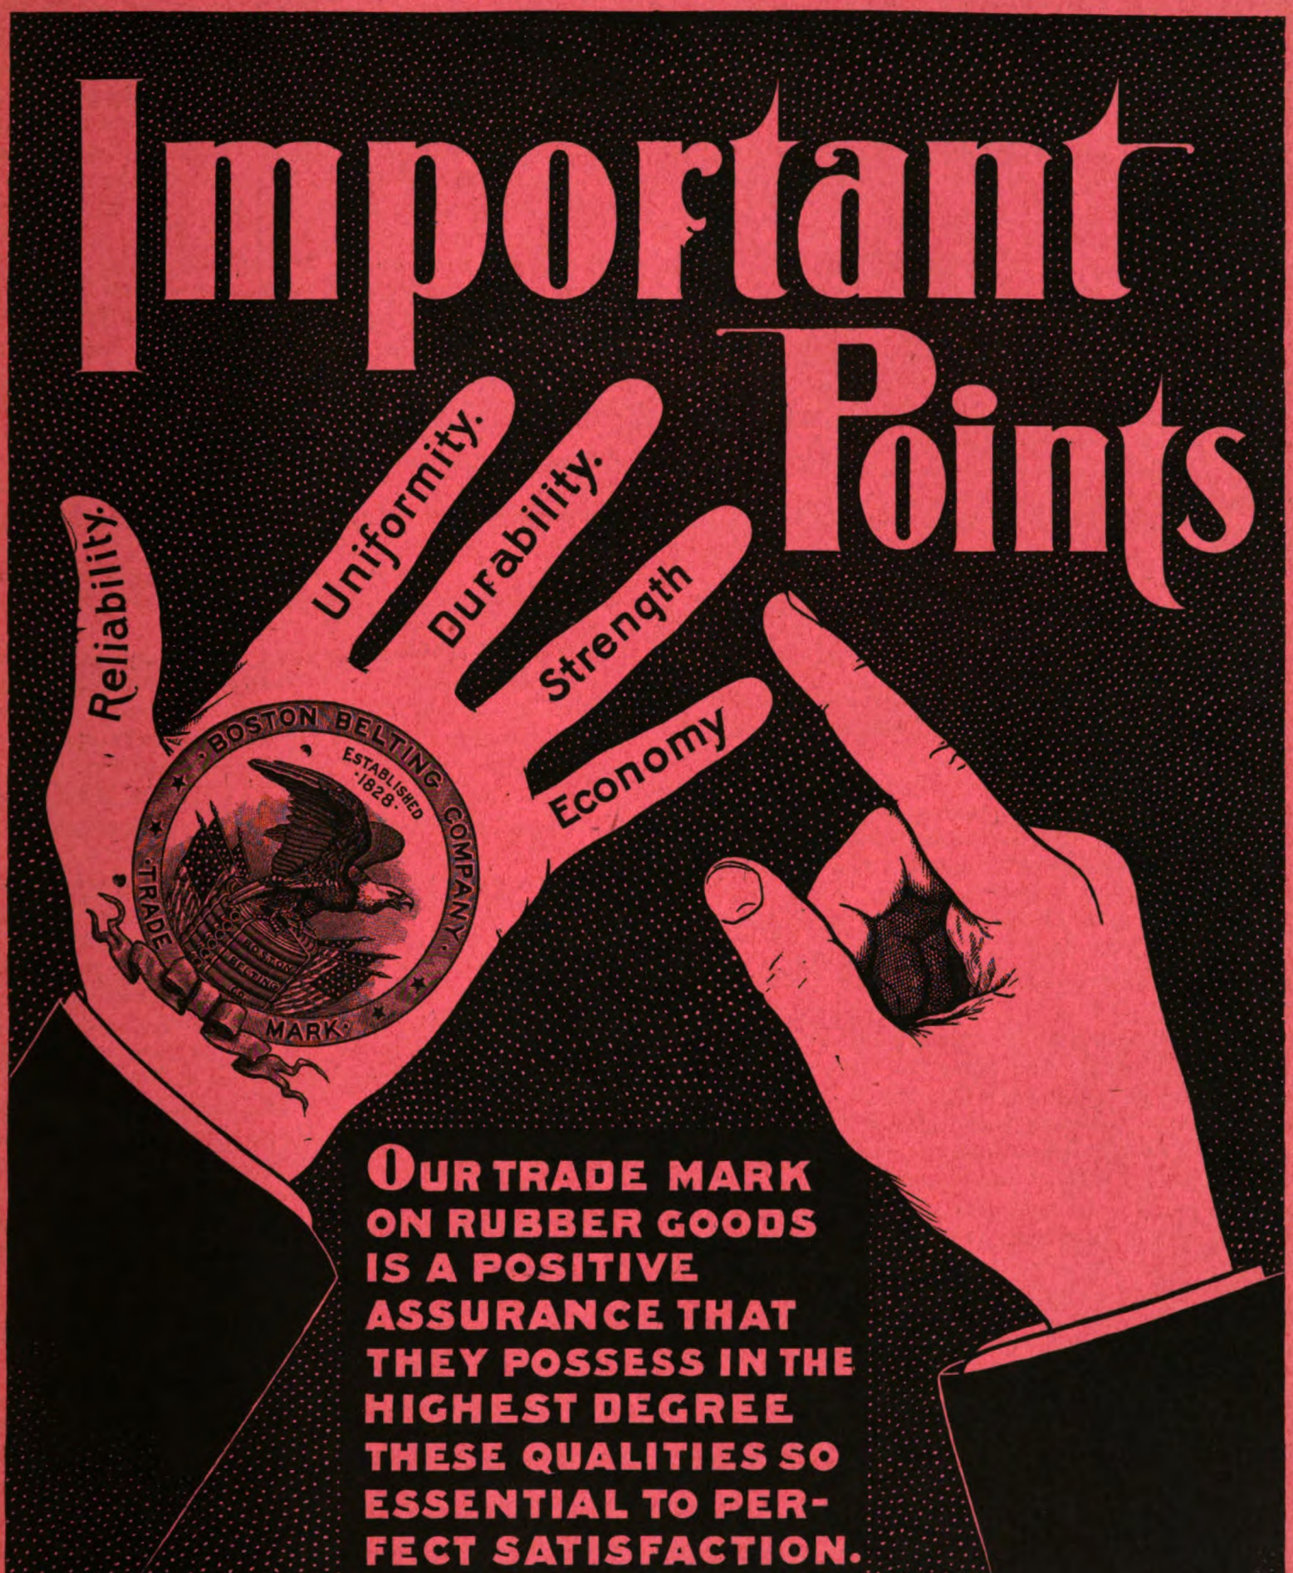
"Is there much work on the locks about the city?"

"Rather more than one would suppose. As a matter of fact the locks that are made of so great combinations wear out and get out of order easily. A lock that is much used will wear away in the tumblers so that a key will not have the required effect upon them. Then we are called in to do the repairing. Some locks will not last over two years at the most before they need repairing, so there is a constant demand for our services."

Truly the locksmith has a mission in life to keep the man going home late from swearing at a bad working lock and the inability to find the keyhole. The locksmith is a modest man, and his business is not done where it makes a great show, yet it is a trade like all others acquired only through years of experience and close application.

A Street Railway Switch Tower We Could Find Use For in New York.

A switch tower has been established at the crossing of Euclid and Willson Avenues, in Cleveland, Ohio, for the operation and protection of street railway traffic. At this point two lines of double-track street railways cross each other, and both are crossed diagonally by the Cleveland & Pittsburgh road; the street car lines are also connected by Y-tracks.



Derails are placed in the street car tracks, which are operated pneumatically from the tower, except during a certain interval, when they are thrown by hand by the conductors. During the busy hours the switches are operated from the tower as in steam railroad operation. It is said that each day 1340 movements of the switches are required at this crossing.—*Railway and Engineering Journal.*

Willie Good—Pa, our teacher says that "collect" and "congregate" mean the same thing.

Rev. Good—Well, you tell your teacher that you have information that there is a considerable difference between a congregation and a collection.—*Baltimore American.*

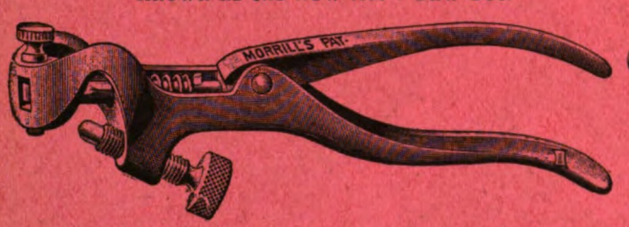
MORRILL'S

Saw Sets, Bench Stops, Punches, Cutting Pliers, and Seal Presses.

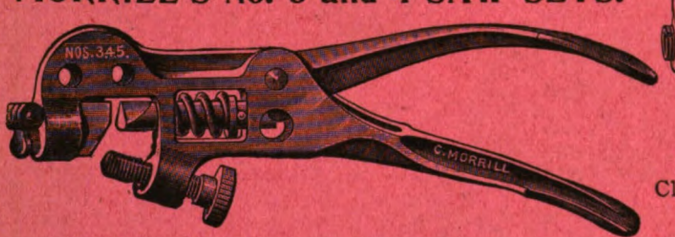
REGISTERED U. S. PATENT No. 30572.



TRADE MARK

REGISTERED U. S. PATENT No 30572.

This Trade Mark is stamped on all Saw Sets and other Hardware Specialties of my make.



MORRILL'S No. 1 IMPROVED.

Known as the New No. 1 Saw Set.

For Hand, Band and Jig Saws, from the widest made down to ½ inch. The sets are too well known for me to enlarge on them.

MORRILL'S No. 3 and 4 SAW SETS.

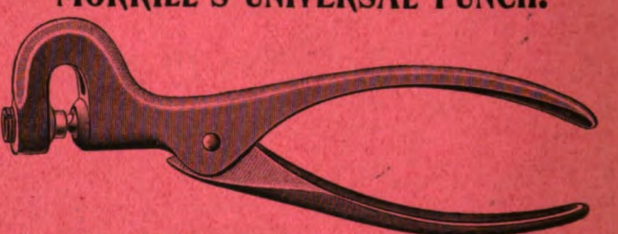
No. 3, Cross Cut and Circular, single tooth, from 14 to 20 gauge. No. 4, Cross Cut M and Champion Tooth, from 14 to 20 gauge.

MORRILL'S No. 5 SAW SET.

15 Inches in Length.

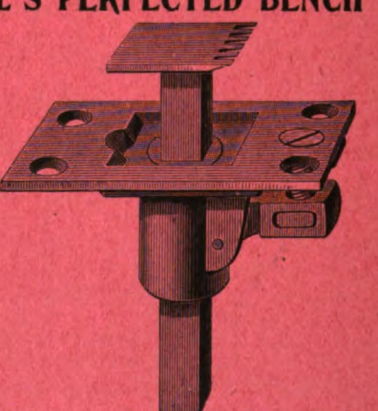
For Timber and Board Saws, from 6 to 14 gauge. The size of the saw in circumference makes no difference.

These sets are made strong, accurate and durable.



Saw teeth should never be twisted, but set at right angles to their points, as shown above.

MORRILL'S MASTER-PIECE No. 95.



The revolving anvil with indicator sub-divided and marked with figures, the figures showing the number of teeth to the inch in the saw to be set; for example if the saw has four teeth to the inch, turn the anvil until the figure 4 comes up directly in front of the plunger, and so on.

MORRILL'S UNIVERSAL PUNCH.

For Punching Leather, Rubber, Paper, Paste-Board, Cloth, Celluloid, Veneering and other pliable substances.

MORRILL'S PERFECTED BENCH STOP.

No wood worker can afford to do without a reliable Bench Stop or hook, as it is sometimes called. The end that the screw is in should always be toward the operator. The spindle and working plate is of WROUGHT STEEL. The body is of malleable iron, rendering it the most durable and useful Bench Stop ever put on the market.

Write for Catalogue and obtain a complete list of specialties from which the few cuts above have been chosen.

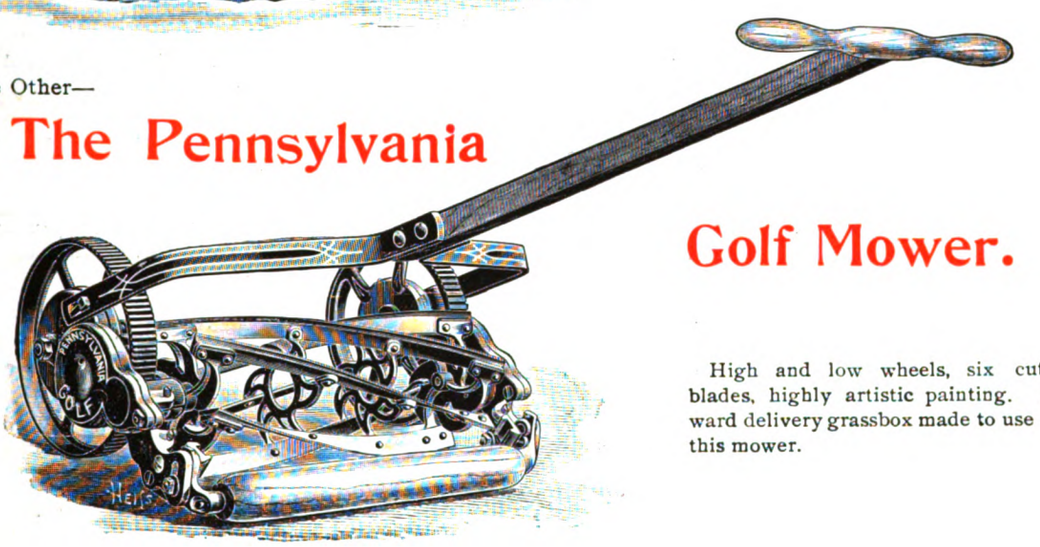
THE CLOSING YEARS OF THE CENTURY

Have given to the Trade two of the finest Lawn Mowers ever conceived.

One—



The Great American Ball Bearing Mower.

High wheels, five cutting blades, adjustable ball bearing cones, beautifully painted.

The Other—

The Pennsylvania Golf Mower.

High and low wheels, six cutting blades, highly artistic painting. Forward delivery grassbox made to use with this mower.

BICYCLE TRADE SPECIALTIES.

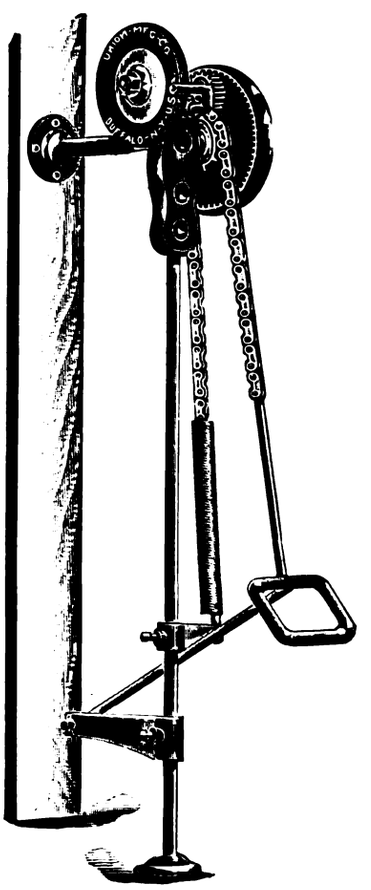
Jones Reversible Spiral Screwdriver.

Voigt, Starr & Co., No. 67 Reade Street, New York, who are the sold agents for the Spiral Screwdrivers manufactured by F. A. Howard & Son, in addition to their popular line of Spiral Screwdrivers that are marketed under the name of the Jones Reversible, the Howard-Allard and "Electric," have recently added the Jones Reversible Spiral screwdriver that is made expressly for bicycle manufacturers and repairers. Each of these desirable tools has one slotted bit for spoke nipples, in addition to two sizes of bits for screws. The slotted bit was designed by a practical mechanical bicycle expert, who recognized its utility, and knew that a large sale would result from introducing it. Its reversible action makes it a very practical tool for putting on or taking off spoke nipples, while it is set and adjusted by the brass sleeve noticeable in the cut. They are intended to be retailed at $2 each, with liberal discount to the trade, and descriptive circulars with net prices and illustrations of other handy tools will be mailed upon request to the sole agents as above.

This Cut Shows Spiral Extended—Length without bit, 15 inches.

This Cut Shows Spiral Closed—Length without bit, 10 inches.

Rome Automatic Bicycle Pump.



The Rome Mfg. Co, Rome, N. Y., are manufacturing the Rome Automatic Bicycle Pump, an illustration of which is shown herewith. The cylinder is nickel-plated brass, and can be connected directly to the tire valve stem without the use of the usual intermediate rubber hose. The spring noticeable between the outer and inner tube forms an adjustment between the end of pump and valve-stem for any condition of tire or stem, giving a direct connection

from pump to tire. The pressure on the valve-stem is relieved as the tire fills by the spring adjustment, and the very slight angle at which the pump is attached to the stirrup permits the hand to clear the wheel in pumping. The pump proper passes through a short piece of tubing slightly larger than the pump barrel, and to this piece of tubing the stirrup is attached. The end of the pump is open to permit of its passing between the spokes and over the valve-stems, and when in position to operate, the hand is entirely free from any contact with the wheel. In order to operate it, it is necessary to place the end of the pump over the valve-stem, then the foot in the stirrup, when the pump will immediately adjust itself, and is then ready for use.

Union Knife and Tool Grinder.

Union Mfg. Co., Buffalo, N. Y., and Mt. Forest, Canada, are making the Union Knife and Tool Grinder, which

we illustrate herewith. It stands 42 inches high, has ⅝-inch shaft, and carries an emery wheel 6 x ¾ or even 1 inch wide, if preferred. As sent out from the factory it is all connected and ready to screw to wall and floor for immediate use. It is especially recommended by the manufacturers for bicycle repair shops, small machine, jewelry, carpenter and butcher shops; also mills, for farmers' use, or any place where knives, scissors, tools or light grinding is required. Among the advantages pointed out by the makers are the fine cut gear, new positive ball clutch; that there are no belts to slip; that the bearings are large and well fitted, and that the grinder is mechanically correct. In addition to above a specially constructed buffing wheel has been added, intended for all light buffing, such as can be used in tin shops and Hardware stores for cleaning soiled tools, etc.; also in arsenals for cleaning uniforms, buttons, buckles, etc.

Columbia Automatic Gas Lamp.

The Hine-Watt Mfg. Co., Nos. 14-16 North Canal Street, Chicago, Ill., are placing before the Hardware trade and dealers in bicycle sundries the Columbia Automatic Gas Lamp, which we illustrate in this article. It is designed to be used with acetylene gas, and is claimed to possess many original features in its make up, which would make it

Digitized by Google

worthy of consideration by those handling and using this line of lamps. Among the several important improvements claimed by the manufacturers to merit attention we note the following: The Columbia is provided with an automatic water feed, permitting the water to flow in proportion to size of flame required. Has a self-cleaning water valve, with a patent winged water distributor, by the aid of which no carbide is wasted, as the charge can be used repeatedly until exhausted. The carbide can is dust proof, being telescopic, and it is claimed can be carried in the pocket loaded without detriment to charge. It is provided with a non-carbonizing removable burner, which can be regulated to suit the amount of light required. A splash diaphragm is provided, which prevents waste of water on rough roads when lamp is used as a buggy lantern. Included in the outfit is a special dashboard bracket for carriages, which will interchange when wanted with regular

bracket. Has a three-inch aluminum reflector, giving a wide distribution of light. The lamp is made of steel, brass and aluminum, heavily nickel-plated and well finished. Height, 5 inches; weight, 18 ounces; will burn from four to ten hours according to size of flame. The Allerton-Clarke Co., No. 79 Reade Street, are New York agents.

Our German Imitators.

The great and justifiable fear that possesses German manufacturers, that the United States will supplant them in the widening markets of the world, has led them to inaugurate a system which, while it is commercially disreputable, is a distinct concession to the genius of American inventors and manufacturers. They have imitated American farm implements, stoves and labor-saving machinery with fair success, according to reports of our consuls in German trade centers, and now they propose to imitate Philadelphia locomotives. For this purpose they have imported a number of these engines as models.

Only a temporary advantage can come to the German imitators at best, for experience has shown that where the imitation article comes in competition with the American original the latter is selected and the imitation product thrown to one side. For a time German-made axes, of American model and design, found favor in several South American countries, but the instant the American article entered the field, at a slightly increased cost, it became the favorite, and the German fraud lost whatever prestige it had previously enjoyed.

Not the least nefarious of the schemes adopted by some traders to hold their markets against American competition is the practise of advertising and making these articles as made in the United States. The widening range of our commerce and the growth of our foreign trade are drawing the attention of our inventors and manufacturers to the unscrupulous trade-getting and trade-keeping schemes of the Germans particularly, though our English and French friends are not above an occasional little whirl in the same line.

While it is a tribute of fear and a concession to the superiority of American products, it is nevertheless a matter which should receive the serious attention of American inventors and manufacturers. A successful exposure and defeat of the fraud will always follow the placing of the original beside the bogus in the markets of the world. There can be but one issue, as experience has demonstrated—a triumph for the American manufacturer.—*Philadelphia Press.*

Tricks of Trade Over the Sea.

"When I first went to Guatemala," said a man from Central America, "it was as agent for a machinery house in Michigan. There is an immense lumber trade in the Republic, naturally I expected to do well among the sawmill men; but I was disappointed to find that they had been getting their machinery for years from French and German makers and were firmly convinced that it was the best in the world. One day I went to see a wealthy lumberman for the express purpose of trying to sell him what we called a 'novelty woodworker.' It was a very useful device, carrying a planer on one side and on the other a set of tools for molding of different patterns. The lumberman admitted its value and the need for something of the kind in his plant, but said that his brother-in-law, who was also in the business, had a German machine that did the same work and was much better made, and he had determined to buy a duplicate. The brother-in-law's place was only a few miles away, and the mill man volunteered to take me over and show me the machine. I gladly accepted, and was surprised on our arrival to find the thing apparently an exact duplicate of the one made by my house. It had a very conspicuous brass plate across the front, engraved with the name of a machinery house in Hamburg, and while I was looking at it, I had an inspiration. Picking up a screw driver I took out the attachments of the plate and pulled it off, and underneath, just as I expected, was the name and address of the Michigan manufactory which I represented. As a matter of fact the machine had been sold by our New York agency, shipped over to Hamburg, given a name plate and catalogued as a native German product and sent back again across the Atlantic to the customer in Central America. The mill man was astounded and gave me an order on the spot, and the episode made a deep impression on my mind. It illustrated in a striking manner how the pushing European dealers are taking possession, right under our noses, of a magnificent trade field which belongs to us by all the logic of geography and common sense."—*New Orleans Times-Democrat.*

A curiosity at least is this compilation of the deepest wells in the world: In Europe, one at Passy, France, depth 2000 feet; at La Chapelle, Paris, depth 2950 feet; at Grenelle, Paris, depth 1798 feet; at Neusalwerk, near Minden, depth 2288 feet; at Kissingen, Bavaria, depth 1787 feet; at Sperenberg, near Berlin, depth 4190 feet, which is said to be the deepest in the world; at Pesth, Hungary, depth 3182 feet. In the United States there are wells located at St. Louis, depth 3843 feet; at Louisville, depth 2086 feet; at Columbus, Ohio, depth 2775½ feet; at Charleston, S. C., depth 1250 feet.—*Exchange.*

"I like you very much, Mr. Ardup," the young heiress said, "but I cannot marry you."

"I will be equally frank, Miss Bullion," he rejoined, picking up his hat. "I don't like you at all, but I would marry you in a minute. I am more self-sacrificing than you are. Good evening —*Chicago Tribune.*

The average duration of life is greater in Norway than in any European country; this is attributed to the uniform cool temperature of the climate.—*Ex.*

SEWING MACHINES AND THE HARDWARE TRADE.* VIII.

With an acquaintance of fifteen years in the Sewing Machine business I believe that my experience with this line will prove of benefit to the dealer contemplating engaging in the sewing machine business. I am of the opinion that the average Hardware dealer can handle sewing machines as easily as he can any other line of goods. But I am also of the opinion that unless he is ready and willing to give the sewing machine business the same amount of time and care that he devotes to his other business, and that unless he or some of his clerks have confidence in the business and the sewing machine they handle, he had better let them alone.

It is a fact that is being recognized by many of the standard companies that the exclusive sewing machine dealer is becoming a thing of the past. In the development of business competition it has become almost essential for the Hardware dealer to continue adding some profitable and easy selling specialty to his line, to help assist in bringing out the net profits of his business.

I have great regard for the "old time dealer" of sewing machines, whose technical knowledge of sewing machines enabled him to make many satisfactory and profitable sales, but that same "old timer," unless he has changed his methods, and has added to his stock of sewing machines some other profitable selling article, is not the dealer for any manufacturer to tie to.

Selling sewing machines, means selling in such a way that the customer is satisfied, continues and remains satisfied, pays promptly and readily, and takes pleasure in sending you more customers. The occasional sale of a sewing machine by a Hardware dealer whose time and attention is demanded in other departments, brings usually more trouble than profits.

Some people seem to possess, naturally, the art of selling goods. Such only need to get "the knack" of the machines. Others again, knowing all about the machines are not salesmen, and must learn this art. Just how I acquired "the art" it is difficult to say. I don't know how I got it; I think I just grew into it as I went along, whatever my natural ability may have been.

In dry goods, shoes, and all other lines that a country dealer must handle there are a good many things to learn before one becomes a good salesman. The man who has grown up in such a store gets to learn the points in different branches little by little, but the new man must make a comprehensive study when he takes hold. It is the same way in taking up the sale of sewing machines, or in fact any other new line, whatever it may be.

In order to be a successful sewing machine salesman it is your business to make the party believe they want a sewing machine and cannot do without one—then you go on to enumerate the special features possessed only by your machine. You get the party interested, and now commence to close the sale by stating your terms and the liberal guarantee given with the machine.

The ability to talk when talk is necessary is one of the prime requisites for a successful salesman of sewing machines; but the tact that restrains the salesman when talk is not necessary is quite as essential to his success.

As the editor of one of the trade papers recently put it: "As a choice between the dumb man who can skillfully exhibit a sewing machine and the man who tells it all and offers no demonstration to back his words, give us the dumb man." The same authority also says: "Suppose the salesman will sew a seam, and spreading it open pull as hard as he can before the customer's eyes, then pass it over to be stretched and pulled by all who are looking on—will it be necessary to say that the seam is strong, or will the customer fail to find that fact out? But the assertion of the salesman, without tbe sample, would have been less convincing. If the drawers are opened and the attachments spread out where they can be seen and counted, the customer will be better satisfied than with the salesman's word that they are the best that have ever been seen."

As pointed out in my previous articles, while it is not essential for the Hardware dealer to be an expert operator, it is desirable that he should have some knowledge of sewing machines so as to be able to dwell on the good points of his machine, as well as the weak points on the machine handled by his competitor.

G. H. Dirhold.

Rockford, Ill.

In Regard to the Return of Goods.

The return of goods to a manufacturer or jobber without their consent or provision in terms of sale is not authorized by the ethics of commercialism. In the ease of machinery that is alleged to fall short of its guaranteed ability or capacity the manufacturer must be given an opportunity to demonstrate that it justifies his claims before he is asked to take it back. It is the duty of the dealer to refuse to take back from a farmer any implement he has purchased until such a demonstration has been attempted without success or the opportunity has been ignored.

More than that, and always in the case of non-complicated machinery, the effort to demonstrate its working quality should be made by the dealer or his employees, and only in the event of their failure should factory help be demanded.

Because a competitor sells similar goods at lower prices is sometimes deemed an adequate excuse for returning certain articles. The sins of the competitor should not be visited upon the maker of another line.

Aversion to carrying goods through the non-selling season is an excuse, but never a reason for the return of them. This is one of the inevitable risks of trade, as every merchant knows before he engages in business.

Overpersuaded by ambitious salesmen and stocked in consequence beyond one's needs, is another. This is an admission of poor judgment that justifiable pride ought not permit. The remedy is to exercise more care next time. The seller has no way of knowing that the salesman was unduly persuasive and has gauged his own purchases by the orders taken.

If known to be agreeable to the shipper that certain goods shall be returned, shipment should not be made without directions. It is not always the desire of the seller to have the goods returned to his place. They may be needed elsewhere and the expenses greatly increased by unauthorized shipment.

Reshipped goods should be packed as carefully as they were when received, and the returner should endeavor to secure the lowest rate of transportation obtainable.—*Farm Implement News.*

"What reason do you think that Boston girl offered for rejecting me?"

"I can't imagine."

"Land of goodness! She said she was afraid to marry me for fear she would outgrow me.—*Chicago Record.*

Making of Lamp Chimneys.

A visit to a glass chimney factory during the "night turn" is one of the sights of Marion, Ind. At the Thomas Evans glass house, near the Soldiers' Home, one is in the midst of light that bears a resemblance to one of the underground scenes in Rider Haggard's "She." At this plant the chimneys for the old-fashioned petroleum lamps and lanterns and the modern gas globes are made and the process is very interesting.

At the big chimneys, or furnaces, men shovel into the huge pots loads of broken glass and materials used in the formation of glass. Soon the wheels, belts and ventilating fans begin to move, and groups of men gather about various small furnaces that stand around the massive central chimneys. From each group of men one man starts, bearing in his hand a blow pipe. He is called the gatherer. With rapid strides he goes to one of the pots of molten glass, thrusts in his iron wand and hurries back, deftly twirling the blow pipe to keep the hot glass on the end from falling to the ground as well as to mold it into the desired shape. At a little iron-covered table the wad of hot glass is rolled back and forth for a time, and then the gatherer blows into the pipe, and the glass assumes a slightly globular shape.

The pipe is swung gently from side to side, a little more air is forced in, and the tube is passed to the blower. He, with the skill of a juggler, swings the pipe, now and then blowing into it or pressing the glass against an iron block upon the floor, and in a short space of time to the end of the blow pipe is attached a lamp chimney, the upper end fastened to the iron and the big end tightly closed. Seating himself between two small inclined rails, the blower rolls the tube and the red hot chimney up and down with his left hand, his right hand being employed with instruments that measure the length and girth of the chimney and a tool with which the form is improved.

Suddenly the workman's hand, grasping what appears to be a pair of glass shears, rises above his head and like lightning descends upon the partially formed globe. There is a clash, and a knob of glass falls from the lower end of the new product; the large end of the chimney is now patent. Instantly the shears are thrust into this opening and held there while the left hand rapidly rolls the pipe and chimney up and down the incline, and thus the lower opening of the chimney is shaped.

The chimney and blow pipes are now placed within an aperture in a small furnace. Thence it is taken by another toiler and a gentle tap soon separates globe and tube. The little end of the chimney is now held in the furnace till it becomes again red hot and is then carried to a machine where it is placed against a swiftly revolving piece of metal until it is distended to the required size and at the same time is pushed against a mold which forms the crimp at the top of the lamp chimney.

The product is placed in a box, and at the conclusion of the "turn"—a half day's work—the annealing ovens are reached. The ware is next inspected by lady inspectors and then by the blowers, the defective goods being cast to one side and the perfect articles packed for shipment to Posey County, Kalamazoo, Cape Town, Siberia, or wherever a gas or petroleum lamp is burned.

Practicability of Inventions.

The precedence which the bicycle by its paramount popularity has attained over other manufactured articles is responsible for some plausible and numerous worthless inventions. It has served as a stimulus to inventiveness, and, as a natural consequence, not only have numerous inventions for improvements in bicycles been introduced, but every conceivable appendage has been patented under the title of bicycle accessories.

It is too often the case that theories to revolutionize present models are the results of guesswork; and success requires a more substantial foundation. The device is first designed and then the search is made for a suitable place to apply it; and the bicycle, offering the most promising field for profit, is asked to adopt an idea which in itself may be a valuable mechanical conception, but which for the use for which it is offered does not merit the recognition sought.

Inventors should make it a fundamental rule to first post themselves on the disadvantages which ingenuity can overcome in the existing pattern and then concentrate their energy in that particular direction. Many promising inventions have been rejected without consideration, or allowed to enjoy only a transitory recognition, because they were misapplied; and other inventions will suffer the same fate unless they give evidence of some familiarity with the requirements of wheelmen and are simple and comprehensive enough to interest a manufacturer at a glance. The manufacturer is used to hearing solutions of problems that do not exist and has no time to spare unless convinced at the outset that the remedy is an effectual antidote for a palpable defect.—*The Wheel.*

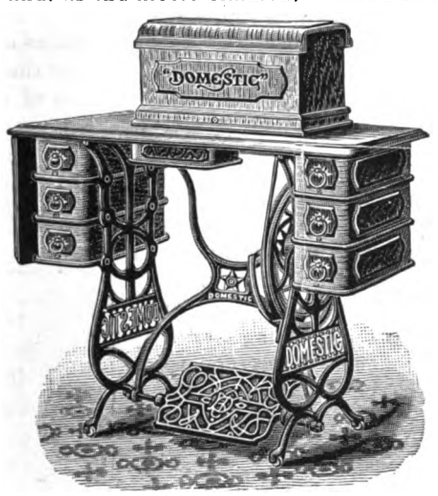
Hobart B. Ives & Co.'s Specialties.

Hobart B. Ives & Co., of New Haven, Conn., U. S. A., whose business was founded by Hobart B. Ives in 1877.have always been regarded as the pioneers in the manufacture of the style of sash fasteners which has made their name a household word throughout the United States as well as abroad. They have enjoyed to a large extent the unprofitable species of flattery which takes the form of imitation, a number of efforts having been made to make goods similar in appearance, but lacking in a number of the essential qualities that have made the Ives sash lock so popular with the trade, and which it is confessed is more widely sold than any of those which claim to equal it in merit. This arises no doubt from the fact that not only does it perform the duties of a sash fastener of the every-day variety, but it also most effectively draws the two sashes together, locking them in a manner so perfectly secure as to be inoperative to the burglariously inclined individuals from the outside. At the same time this burglar-proof lock quite effectually settles the disagreeable qualities of the rattling window. As will be noticed in their announcement on page 69 of this issue, they have just brought out a Window-stop Adjuster, which has been fully protected by patents in the United States and foreign countries. The essential feature of this adjuster is that it is practically a flush washer, and being made from one solid piece of metal in a pattern that has a thick bed, it will not bend in tightening the screw, and having a thin flange, to admit of an extremely close adjustment of screens, and which also prevents the screw from drawing it into the wood. It is extremely neat and ornamental in appearance, affording a quick and simple adjustment of the shrinkage or expansion of the windows to which it is applied, and doing away entirely with all weather-strips and other anti-rattler devices. The firm have recently issued a thirty-page catalogue, illustrating their entire line of window Hardware specialties, which will be mailed free upon application, and should be in the hands of every Hardware dealer in the country.

The Norwalk Foundry & Machine Co., of Norwalk, Ohio, recently received an order for 700,000 pounds of castings, with the privilege of increasing the order to 1,200,000 pounds within a year.

"No, he couldn't get his life insured."

"And yet he always looked sound and robust."



"Yes, but he never had enough money to pay the premium.—*Ex.*

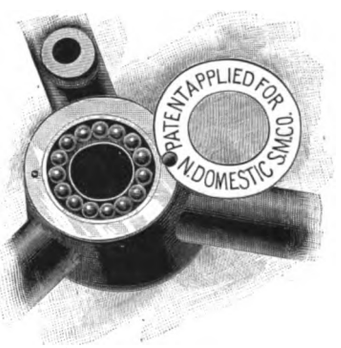
THE NEW DOMESTIC SEWING MACHINE.

Of the great number of Sewing Machines placed on the market during the past thirty years, few have had a greater popularity than the Domestic. Coming as it did with a high arm, large and strong, at a time when all of the leading machines were of the small, low arm pattern, it seemed an innovation in the line of sewing machines. The sewing machine trade examined it, tried it, and decided that while it was a light running, noiseless machine, it was too large to suit the people or amount to much in the way of competition. It did not take long, however, to disabuse their minds of this idea, for when the Domestic was placed in a house, and properly shown, it was sold, and once sold it made friends. It was always ready to sew. It ran with no noise and very light. It was strong, graceful in proportion, roomy under the arm, needed no care, and little, if any, instruction to operate. It grew in favor, and in a few years the older companies realized that the newest addition to the sewing machine ranks was fast becoming the favorite and growing in popularity.

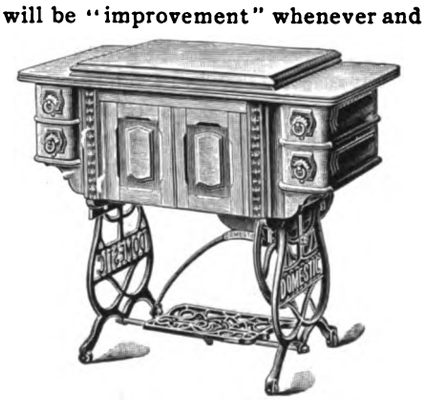
From 1880 the Domestic was really the leading family machine, and, as the motto claimed, "stood at the head."



No. 4.

Other companies began to model their machines after the Domestic pattern. Salesmen of other companies helped to advertise the Domestic by explaining to the customer that their machine was "just as good as the Domestic." Agents and dealers wanted it because it was the easiest sold, and the customer liked it because it gave satisfaction. The price was higher, the time shorter, the management more conservative than any other company; yet its popularity grew until the name "Domestic" became a household word, the machine being known and sold in every civilized country of the globe.

Early in the past year the company was re-organized, and with new blood infused, with energetic, experienced men at the head, the Domestic started out on another era of successful business.



Again changes are being made and improvements added; what was considered perfect in other days will not satisfy the public now. Manufacturers in all lines realize this. While a machine may do excellent work, changes must come with the times and with experience. In the hurry and bustle of American life, what was perfect yesterday is relegated to the past to-day; in the sewing machine business this may be said to be peculiarly true. Changes in fashion, the demand for special work on clothing both for men and women, the necessity of meeting competition in quality and prices require the ordinary family machine to do any and all classes and kinds of work. It is evident that the management of the New Domestic Sewing Machine Co. have realized this fact, and with that end in view have gone ahead to, if possible, increase the range of work done on the Domestic and supply a line of machines to meet the various demands of the trade. Recently a new and improved Ball Bearing device has been added to the

THE RETAINER PLATE OR RING SWUNG OPEN ON THE PIVOT, REVEALS THE BALLS IN POSITION.

stand, as shown by the illustrations which we present herewith, simple of construction and easily understood. In meeting the growing demand for a successful ball-bearing stand, this Company did not attempt to follow any cheap devices heretofore used in the trade, but instead, originated a simple and perfect retainer plate for the balls, which makes the ball-bearing feature practical for the sewing machine. It is stated that other changes will be made when it is found that a change will be for the better. A line of machines both for the family and the factory is contemplated, so that a dealer may, by carrying the Domestic output, be in a position to meet any and all competition.

The Company manufactures their own woodwork, and to this fact can be attributed the excellence and popularity of the Domestic woodwork; and in this, as in the machines, the motto will be "improvement" whenever and wherever

IN OAK OR FANCY WOOD.

possible. The Company want the best; nothing else will satisfy. And if first class goods and courteous, honest treatment will get trade, the Domestic will command it. The Factory at Newark, N. J., employs only skilled labor, every machine being carefully inspected before going out, so that the dealer may feel assured, when a machine comes crated to his store, it is there ready to transfer to his customer without having first to go over and readjust it.

The Home Offices for Wholesale and Export trade are located at Nos. 16–18 Exchange Place, New York, where all

correspondence should be addressed. First-class dealers are wanted by the company in all unoccupied territory. Circulars, terms, etc., may be obtained by addressing the New Domestic Sewing Machine Co., Nos. 16–18 Exchange Place, New York City.

The First Mowing Machine.

Many of our readers, says the Chatham (N. Y.) *Courier*, will be interested in this sketch of the first trial of the original mowing machine invented by Enoch Ambler, of Austerlitz, N. Y. This is the story of the mowing machine trial.

Old Father Time is always pictured with a scythe in his hands. Why? Simply because for countless ages men had been compelled to toil with the scythe, and if disease had slain its thousands the scythe had slain its ten thousands. But Enoch Ambler was the mighty genius who revolutionized farm labor and took from his fellowman the scythe and transferred from them to horses the heavy burden they had borne so long.

Enoch Ambler of the town of Austerlitz invented and built with his own hands the first mowing machine ever made. He lived at the time in a house that stood on the farm now owned by Harvey Vincent. He was a poor man and succeeded in getting Sherman Griswold interested in his behalf. Sherman was what would in these times be called a promoter. Through him Matthew Beale became interested and they together agreed to give Ambler, so I was told, $1000 for the machine and all rights belonging to it, provided it would work. A day for the trial was set and the meadow, then known as the "Babcock meadow," was chosen as the place. Quite a large number of farmers, their wives and children were on hand besides lots of those of the "I told you so" class. Ambler drove up into the lot with the machine in his old one-horse lumber wagon. The people stared in perfect bewilderment, expressions of all kinds being heard on every side. Imagine the situation. Here was Ambler fearing his labor of years in thought and toil would not be accepted. Griswold, his patron saint, who had helped him secure his patent by loaning money, was afraid that Beale might balk, and to cap the climax, after the machine had been put together and a spirited team of young horses attached, no one dared to mount the seat and drive. "Them horses will be afraid and run away and smash it all to pieces." "Them spikes out of that big wheel will fly out and kill some one as the thing begins to go," and enough other like sentiments were expressed to turn even well-balanced heads. But just at this time Robert Griswold, a cousin of Sherman, came into the field. Milton Niles says: "Here comes Bob, he'll drive; he's not afraid." Bob took the lines and turning to Ambler says: "How does the thing turn around?" Ambler says: "Robert, turn to the right at the corners and look out for the stones."

A man was placed at each corner of the lot with an extra sharp knife and a whetstone, so when the machine reached his corner he exchanged his knife or scythe for the one that had done duty from the corner back. The team the first time around would have run away had it been possible, but that with this driver was out of the question. Mr. Beale told me that as the team came around he was watching it and soon saw that it was doing its work far better than he expected, and as they came around he said to the driver: "How does it work? What do you think of it?" He replied: "The machine is all right, but the grass that was cut the last time around bothers and you want an old, steady team."

Mr. Beale said it was then he began to study out the track clearer, which he afterwards invented. The knife being so long the field was soon cut, and everybody was happy because the machine was accepted. Let every farmer honor the name of Enoch Ambler and the names of his friends that helped him in his hour of need.

Who Invented the Driven Well?

This has been a question which caused a great deal of controversy at various times and was the foundation of various erroneous ideas as to the fortunes derived by the original patentee. In this connection the following statement by Calvin E. Keach will be found of interest.

I should be sorry to spoil a good story, or contradict what seems to be a fact, but I am sure you desire to be exact in your statements of news. In speaking of the great value (in money return) for small patents, it has been stated "The 'Drive-well' was an idea of Colonel Green," and that "Colonel Green amassed £600,000 out of royalties." You will pardon a seeming egotism in the personal statements I now make. Being convinced in 1881, 1882 and 1883 that Colonel Green was not the inventor of the driven well, I took proofs, covering over 6000 pages, from more than 200 witnesses, in a suit that finally went to the United States Supreme Court, and defeated his claim. There are wells within three miles of my home that were driven before Colonel Green claimed to have thought of it. He never made as much as $10,000 from it; but William D. Andrews' brother did make much; but nothing like what you state. I proved by the records on file in Paris that the French Army, in the Chinese invasion of 1856, obtained water in that method, and the whole process was fully described in a book (which I now possess), called "McKenzie's Five Thousand Receipts," published in London, England, more than fifty years ago.

Compressed Air Cleaners.

A method of sweeping and cleaning railroad stations by compressed air blowers has been adopted by the Central Railroad of New Jersey. It has been found that sweeping and scrubbing and cleaning can be done far more effectually with air than in any other way.

Gangs of men furnished with compressed air blowers are turned loose after working hours upon the floors of the various buildings. They go over every square inch of surface, and over the walls and the furniture, with the blowers, which sweep every speck of dust and dirt before them, doing the work much better than double the help could do it with brooms.

The railroad hands have found many uses for the compressed air, which is so handy for them. They find that it will clean clothes and fine fabrics, as well as plush seats and carpets, and dozens of them take their clothes and uniforms to the men who handle the compressed air to be cleaned. The work takes but a few seconds, is done thoroughly and has the advantage of costing nothing.—*Carpet Trade Review.*

An Evanston man whose wife carries the pocketbook and manages to be in debt every Saturday night, has fixed up a sign, which he always hangs down stairs in the hall before he goes to bed. His wife, by the way, is terribly afraid of burglars, and never retires at night without expecting a visit from them before morning. The sign in the hall reads:

"Mr. Burglar: If you find any money in this house please don't go away without waking me up. I want to see it."—*Chicago Times-Herald.*

"They have queer names for things in Kentucky, haven't they?"

"In what way?"

"Why, what would be considered rioting anywhere else is called political activity there. I wonder how many Gatling guns it will take to constitute a legal election?"

THE MANUFACTURE OF WIRE.

How many of those who sell and use wire have any idea what operations it goes through in process of manufacture? Wire-making practice has of course changed in recent years, as have most manufacturing processes. The earliest forms of wire were hammered from rough bars. This crude way was superseded later, when it was discovered how to draw, and this method of wire-drawing is now universally applied for wires of any material. Mr. A. L. Orton has surveyed in the Sibley *Journal of Engineering* the industry from one end to the other. In the case of iron wire, he explains, the metal is first converted from "blooms" to "billets" and from "billets" to "rods" at one heat. This is accomplished by long train rolls, which pass the rods from one to the other. The rods average from 2 to 600 yards in length. Very large sizes of wire may be made by continued rolling of the rods.

COLD-DRAWING.

The rods thus produced by rolling in the heated state are made into wire by the process of "cold-drawing." By this process the rods of iron and steel, rolled several hundred yards long, are first pointed at one end by hammering or by a special machine, and are then cleansed by washing in a bath of dilute sulphuric or hydrochloric acid, and afterwards immersed in lime-water to give a drawing surface. After drying by heat they are ready for the drawing mill, which consists of a series of horizontal drums or pulleys, 10 to 30 inches in diameter, termed "blocks," mounted on vertical axes on long benches. Accompanying each drum are drawplates and pincer drawers. The drawplates are discs or blocks of cast steel drilled with tapering holes, the small ends of which correspond exactly to the size of wire to be drawn from it. The form of the hole, of course, determines the form of cross section of the wire, which is usually circular, though not necessarily so. When the holes become worn from use and depart from their original gauge, the metal is hammered around the small end, closing it, after which it is reamed out to standard size.

UNIFORMITY OF GAUGE.

Where great uniformity of gauge is required, as in fine gold or platinum wire, perforated rubies or similar hard minerals are fitted in the drawplate. The drawplates are clamped in vises fixed to the bench. As the tapering end of the rod is inserted in the hole of the plate, mechanical pincers seize it and pull it through. The pincers are fixed on horizontal arms, which are moved backward by cams fixed on the axes which rotate the drums. The wire as it is pulled through by the pincers is wound on the drums. The bottom of the drum is fitted with recesses to correspond with projections on a cam mounted on the same axis. The drum can be raised so as not to be in contact with the cam, and then may be turned freely on a spindle. When enough wire has been drawn through the drawplate by the pincers to make one turn round the drum, the wire is taken from the pincers and fastened to the drum, which is lowered, and the cam fitting in its base turns it and winds the wire upon the drum. The drums draw from five to seven hundred feet per minute for ordinary wire, and somewhat slower for crucible steel. The wire has now been drawn down one size, reducing the diameter about ten per cent., and the process is continued until the proper gauge is attained. It is said that copper wire may be reduced fifteen sizes at one drawing.

CONTINUOUS WIRE-DRAWING.

In continuous wire-drawing several drums are placed in line on a frame so that the wire winds on and off each one successively. Between the drums rotating discs, made of some extremely hard substance reamed out to size, are placed so that the wire passes through them. The holes in the succeeding discs are smaller than those in the preceding ones. Thus the cross-section may be reduced a number of sizes in one operation. Of course, the speeds of the drums are proportional to the elongations produced by the reducing of the diameter of the wire, and have to be very exactly regulated so that there may be no undue stretch or slack between the drums. The drawing is facilitated by the application of lubricants; a kind of grease for the larger grades, and liquids such as soapy water and milk for the smaller. Where a straw-colored wire is not objectionable, a weak solution of copper sulphate is used as the drawing liquor. These lubricants coat the wire with a mucilaginous or metallic film, so as to preserve it from oxidation and leave a polished surface.

ANNEALING.

Wire-drawing increases the hardness of the metal, so that the wire has to be frequently annealed during the process. In practice, fine wire is thus softened six or eight times. The annealing pots consist simply of metal chambers into which the wire is placed, and the pot is then hermetically sealed. The process of heating requires several hours at a red heat, a temperature of 600 to 700 degrees Fahr. being best. The pots and their contents are then allowed to cool slowly. An average charge for a pot is two and half tons of wire.

THE PROPORTION OF CARBON.

Steel commonly used in the wire trade contains from one-tenth to one per cent. of carbon. Four-tenths per cent. of carbon in the steel used would make steel spring wire, five-tenths ordinary wire rope and six-tenths of one per cent. piano wire. Where toughness is required the percentage of manganese may range as high as seven tenths of one per cent.

THE QUESTION OF STRENGTH.

The process of wire-drawing greatly increases the strength of the material from which it is drawn. Thus it has been found possible to temper steel wire to sustain a load equivalent to 190 tons per square inch, while 70 tons is considered large in test pieces of hard steel. Such wire, however, is not of practical use, because it is exceedingly brittle, and the brittleness increases very rapidly in proportion to the strength towards this limit. A strength of 150 tons is considered the greatest that can be combined with the essential ductility and elasticity.

COPPER WIRE.

Copper wire is manufactured by rolling ingots or billets into rods in the hot state, and drawing them as in the case of iron wire. Its great superiority over iron in conductivity and its freedom from electro-magnetic induction, give it an immense advantage for electrical uses. Its greater price per ton is compensated by its lesser weight per unit of resistance. It has been shown, on a copper and iron line 278 miles in length, whose resistance and capacity were rendered equal, there was an increase of speed of nearly thirteen per cent. as compared with iron wire. Though a large part of the telegraph service is supplied with galvanized iron wire, copper alone is employed for the long-distance telephone, the electric light, and the transmission of electric energy.

Of the other metals and alloys employed in the manufacture of wire, the most important is silicium bronze, which in France, is rapidly superseding iron and steel in electric transmission.

Machine Tool Economies.

The machining of work is economized by duplicating tools. The oldest example of this occurs in the duplex type of lathe, in which two, and in lathe practice three, four, or even six tools, may, in extreme instances, be operated at one time. Similar illustrations occur in the employment of two tools in planing and in slotting machines; in the carrying on of two or three sets of milling operations at one time, as on some of the plano-millers; in the boring of two or more cylinders simultaneously; in the cutting of several rack teeth at once on several adjacent racks; in the Eberhardt system of cutters for spur wheels, by which two teeth and upwards are cut at one time; and also in the numerous multiple drilling machines.

The machining of work is also economized to an equal extent by operations which are not simultaneous, but in which a number of tools are brought round in quick succession, as in turret practice, and in which also time is saved which is otherwise occupied in resetting work and adjusting tools Time is also saved by the use of stops, by which the traverse of each tool in the turret is limited and arrested without any care on the part of the attendant. In the modern turret, instead of one stop doing duty for all the tools, which involved careful setting of every tool in relation to the stop, every tool has its own independent stop, adjusted to accommodate the tool.

Facility for rapid changing of feeds is another late development which is conducive to rapidity of output. The old devices of altering change gears, or of shifting feed belts, are now recognized as being too slow in operation for the smaller lathes and milling machines. A good many firms, therefore, now embody in their tools devices to change feeds rapidly. The principal among them is the nest of gears, having movable pinions of different sizes, which are slid into gear with fixed pinions by means of a cotter or pin in a sliding rod, which pin drives in the loose pinion through the bosses,—a device put on many horizontal and vertical lathes. In other cases pinions are hinged, to be thrown over into gear and then locked. Another rather common device is the Sellers friction disc, in which the radial position of the inner solid to the outer divided pair regulates the feed. Then there is the bowl type of disc, in which the radial position of the friction roller to the large disc determines rate of feed. These are well known, but their rapidly increasing application to machines other than those for which they were originally designed is a feature which makes for economical working.—Joseph Horner *in Cassier's Magazine for March.*

The Billposter's Hammer.

Among the very great variety of hammers made, including many designs for special uses, is the billposter's hammer, with its magnetized head, and long, jointed handle, with the aid of which bills and cards may be tacked up in conspicuous places, where they would be least likely to be torn down. Magnetized hammers in some form have been used for a good many years, and billposters have sometimes themselves temporarily magnetized a hammer so that it would hold a tack. But the modern, up-to date billposter's hammer carries a horseshoe magnet in its head.

That end of the head which in a claw hammer would be the claw end is in this hammer fashioned into a magnet, but with the arms so close together and so shaped, that, except upon inspection, their purpose might not be noticed. Running down to a narrow flat face across the ends of the arms, this part looks simply like the tapering upper part of a shapely hammer head.

The billposter's hammer is made of cast steel, in two sizes, five ounce and eight ounce. It is fitted with a handle twenty-four inches in length, to which sections may be added. A two-section handle is thirty-six inches long, a three section handle, which is the longest commonly made, though more sections may be added, is forty eight inches. The handle is of hickory and the joints are nickel-plated, as is also the hammer head, and it makes a handsome implement.

Attached to the handle of the hammer is a movable card holder to carry up and support the card to be tacked up. Attached to the side of the hammer head is a simple little contrivance to hold a single tack, which is held in it with its head against the side of the hammer head; the point of the tack, projecting from the hammer head, is thrust through the bill or card to be carried up. With the hammer behind it for a weight this tack is driven wherever it may be desired to put it, and the hammer may be easily drawn away from it. This tack serves to hold the bill or card up until it can be securely tacked there.

In using the hammer in the ordinary way, a tack is placed with its flat top against the smooth flat end or point of the hammer head, where the magnet holds it, from which, of course, it projects, point outward, in line with the hammer head. It can be driven wherever it is possible to reach with the handle. The first blow, with the tack sticking to the hammer, may be sufficient to drive the tack in as far as necessary; if more blows are required, the broader hammer end is used.

Billposters' hammers are used in city and country, but most commonly on the road by circus and other billposters, and other traveling men who have occasion to put up cards. With such a hammer bills or cards can be tacked up high anywhere; in stores or hotel offices, or other public places, or on telegraph poles, or on buildings, or wherever they might be conspicuous, without the necessity of carrying about a ladder; and between times the handle can be unjointed and the hammer thus carried handily in the pocket.—*New York Sun.*

What the Modern Trust Is.

The change is the most stupendous revolution ever accomplished in the history of the world's industrial growth, says the *New York Journal of Commerce*. . . . It amounts to a complete disruption of the relations between the industrial forces and classes of society. It is an extinguishment of the voluntary exchanges between the producing and merchanting interests, and the creation of one exclusive producing organization for each industry, to which all other material interests must yield subjection.

Industry at large is organized into a system of feudalized corporations, each of which enjoys absolute power within its special branch of production, while taken in the mass the system constitutes itself the supremest trade power in the nation. These innovations upon the fixed methods of industry, though fundamentally affecting the citizen's free access to the opportunities of industrialism, take little account of legalities, equally ignoring the law as it stands and as it may possibly be changed to meet the case. This headlong precipitancy has pursued its purpose almost without forethought, certainly with slight consideration for trade moralities or for the weightiest of human liberties, and with little regard for the perils of public order which the outworkings of the system are too liable to evoke.

Mrs Wigwag (looking out of the window)—Here comes that Mrs. Gailey, with the loudest coat on you ever saw, and she's coming up your steps.

Mr. Wigwag—Yes; I think I hear her wrap at the door. *Philadelphia Record.*

"Your capital is not large."

"But quite sufficient. You see, our business is peculiar in that it does not necessitate any evasion of the laws."—*Detroit Journal.*

Hahn's Watchman's Time Detector.

F. A. Nanz & Co., No. 127 Duane Street, New York, are sole agents for the United States and Canada of Hahn's Improved Watchman's Time Detector, with safety lock attachment, here illustrated. The detector is made for

HAHN'S WATCHMAN'S TIME DETECTOR FOR 2 STATIONS.

6, 12 or 18 different keys for a corresponding number of stations or floors. The clock, the case of which, together with the keys, is heavily nickeled brass, consists of a full jeweled lever movement, which revolves around a dial, there being an independent spring to prevent its being turned back. Hours and minutes are recorded, and when operated with the keys it records upon a paper dial the exact time that the key is inserted, by pushing a raised number in its proper place on the dial, thus showing the time of the watchman's presence at any particular station; a dial being furnished for each day. One great advantage is that the registering is done by raised numbers 1-16 inch long, and each in its proper place, instead of an arbitrary sign, so that if a station is missed it is at once apparent, both from the registered numbers and the intermediate blank space, so that the watchman must account for the omission. The movement is separate from the recording mechanism, and will run about 60 hours. The keys are fastened permanently at the various stations the watchman is required to visit, the detector being carried to each floor or station and the record made, thus showing the tour has been properly made. A new paper dial is put on each day, on which the date is written, after which the clock is wound, locked and given to the watchman.

Pennington Ventilat ng Sash Lock.

A. W. Pennington, No. 34 South Water Street, Cleveland, Ohio, is bringing before the Hardware trade a new and

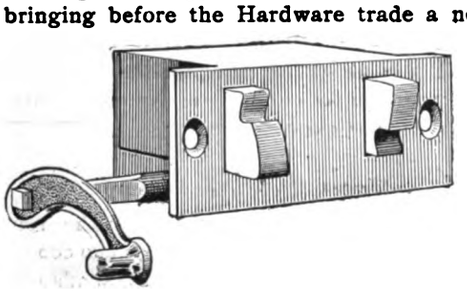

FIG 1.

desirable Sash Lock, see Fig. 1, which has unique and novel features which will prove interesting to those making a study of night ventilation when it can be done with a feeling of security against midnight marauders. The accompanying cut, Fig. 2, shows the lock, which is set in the window frame. When in place, only the handle by which it is operated appears. This lock, as is shown by the cut, has two bolts which fit in the ratchet bars. As will be seen, each sash is independent of the other and can be operated independently as may be desired. These bolts are actuated by a spring which locks the sash automatically, so that in any position of the sash the window is always locked. In moving the windows up and down the handle has to be moved so as to hold back the bolt, which springs back in its place immediately on being released. As it is to be seen, it appears at the meeting of the sash rails, and is entirely out of reach of persons outside the window and locks the windows at any position desired. By carefully noticing the cut, it will be seen that the faces of bolts and also the notches of the ratchet bars are slanting, allowing the window to be closed without operating the lever or key.

FIG. 2.

As the bolts spring into their places in the notches they indicate by a click that the sash is locked, which also serves as an alarm should anybody disturb the window from the outside. From the above it will be seen that the windows can be locked at any point, allowing perfect security against the intrusion of burglars and thieves. Circulars and price list can be obtained from the manufacturers upon request.

Great American Ball Bearing Lawn Mower.

Supplee Hardware Co., Philadelphia, Pa., are manufacturing the Great American ball bearing lawn mower, which we illustrate herewith. Fig. 1 represents the mower ready for use. Fig. 2 shows the adjustment of the ball bearings in a sectional view, and Fig. 3 illustrates the cone or ball race and cap. The mower has a patent adjustable cone so designed as to give the best bearing surface with a minimum amount of friction. The steel balls of high grade are placed in the dust proof steel covered cup and such slight wear as may in time occur can be taken up when

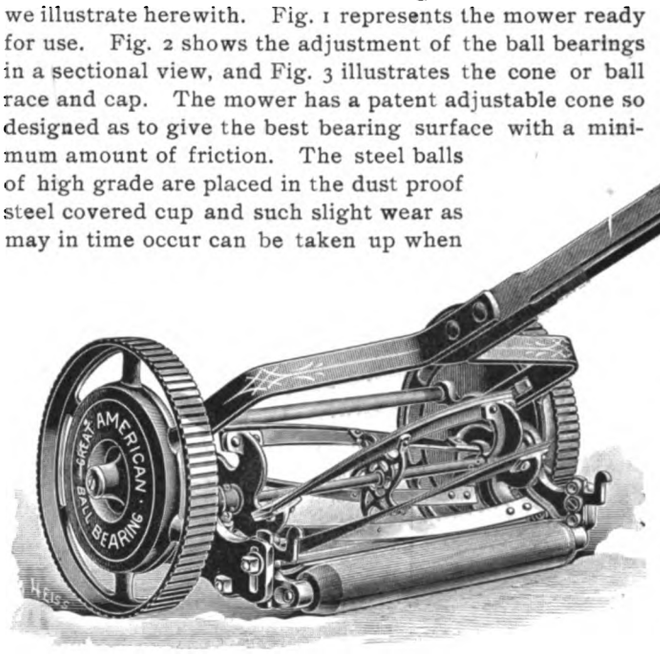

FIG. 1.—GREAT AMERICAN BALL BEARING LAWN MOWER.

desired by slightly turuing the steel pin furnished for the purpose and used in connection with a pinhole in the shaft, The driving wheels are ten inches in diameter and are entirely covered about six and a half inches, so that grass cannot interfere with the motive power, and the bearings are claimed to be as nearly dust proof as possible. The

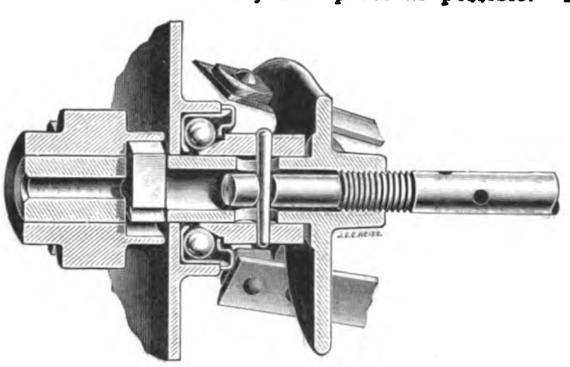

FIG. 2.—SECTIONAL VIEW OF BALL BEARING ADJUSTMENT.

revolving cylinder is six inches in diameter, has five solid cast steel patented cutting knives, hardened and tempered in oil and protected by malleable supports and a rod passing through the cylinder. The dead knife or cutting blade is of improved shape and solid cast steel and can be regulated to cut grass any length from three-eighth to one and

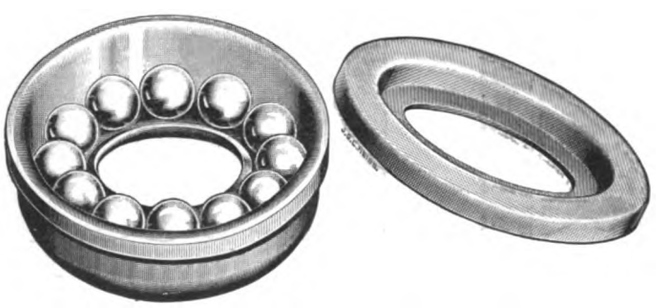

FIG. 3.—CONE, BALL RACE AND CAP.

three-eighth inches from the ground as desired. The ratchets or pawls are cast steel, hardened and tempered, and are noiseless in action. The mower is made in 15, 17, 19 and 21 inch sizes. The attention of our readers is called to their advertisement on page 89.

Misdirected Ambition.

The average clerk or assistant in a retail implement store is prone to look with envious eyes upon the traveling salesmen who visit his employer. Perhaps it is putting it rather harshly to call it envy, for that might imply malice and enmity, many of them long for an opportunity to secure a similar position, setting this mark as their highest ambition. To them the duties of a traveling salesman embrace no hardship or drudgery. That portion of their time not spent in riding upon the cars or resting at the hotels is spent in the supposed-to-be easy pursuit of orders, involving no greater task than a quiet chat with the dealers. They lose sight of the enforced absence from the dearest spot on earth, the early rising to catch early trains and staying up late for the late ones, the hard beds and insufferable fare of the average country hotel, and all the other hardships and inconveniences of a traveling man's life, to say nothing of the disappointments and failures in obtaining orders. As a result a constant stream of applications for positions on the road pours into the hands of manufacturers and jobbers.

To discourage such applicants by calling attention to their lack of experience might be considered on a par with the remark of the father who said to his son: "Never go into the water until you learn how to swim," but since the implement branch of the commercial traveler market is already pretty well stocked with experienced men it is not out of place to suggest that the experienced men are entitled to first chance.

If the assistants who aspire to road positions are conversant with all the unpleasant features of that calling and willing to take the bitter with the sweet, let him remember that there are men of experience who are of necessity compelled to seek employment in this channel. They have made their beds and must lie in them. They have cut all other connections and devoted their time to accumulating experience in this particular line, and if through the ups and downs of commercial life they have been temporarily shelved, their applications are entitled to priority when an opening occurs.

The average clerk or assistant in an implement house occupies a more pleasant position than the average traveling salesman. From a pecuniary standpoint many of them are better fixed than some of the road men. Many who have been given an opportunity to try their luck on the road have gladly relinquished their positions and returned to their native heaths, ready and willing to accept a less remunerative situation than their former one. The majority of them are distinct failures as traveling salesmen.

It is well enough to let well enough alone when a change involves the risk of failure. Ambition should not be discouraged, but ambition has possibilities in the retail implement business far more attractive than those of the commercial traveler's sphere.

Uncle Sam's Economy.

Uncle Sam pays $3,500,000 a year for the rent of 500 postal cars, which could be built for $2,000,000, and they would last for twenty years. Uncle Sam also paid one cent a pound for each fifty-six miles of distance that the railroads hauled the mails. This is about fifty times as much as is charged for carrying merchandise.—*Philadelphia Record.*

"What is a trust, father?"

"A trust, my boy," replied the astute business man, "is a business combination that you are not in."—*Ex.*

OUR WONDERFUL PROSPERITY.

Editor Hardware: Your reminder that one year has passed since the anniversary number of *Hardware* of 1899 tempts one to look back over the past twelve months. Since that time many issues have come to the front and have been discussed and criticised; some of these issues now lie dormant, others have died a natural death, while some remain prominently before us. Pessimists may criticise, as they always have and always will, but the American people as a whole would not if they could close their eyes to the wonderful degree of prosperity which slowly and gradually has come upon us after years of financial depression and distress, and which during the past year has culminated much like the blazing effects of the steel retorts, which the jobbing Hardware trade of the country had an opportunity of seeing at Edgar Thomson's Steel Works of the Carnegie Steel Co. in November last.

The farmers throughout the vast agricultural districts were the first to profit in our nation's progress in this recent prosperity and according to statistics the product from our farms in 1899 was $1,500,000,000 greater than any year between 1893 and 1897. And while the prosperity shown by their savings cannot be given in figures, the well grounded fears which existed a few years ago that thousands might lose their farms through foreclosed mortgages have become dispelled, their land has increased in value, mortgages been liquidated and money for a rainy day invested or carried in bank.

Through the South improved conditions may be found at every turn, additional acreage is being tilled, improvement in price of cotton has helped the needy, iron industries have extended, cotton mills have sprung up in the home of the product and the natural heart of the industry and the capital invested has brought good returns and thousands of unemployed have found work.

Industrial prosperity has given work to over a million who were unable to find employment the few preceding years; this with the increase in wages is shown by the reports of the savings banks throughout the country, the savings of which have piled up into millions. The writer has personally seen during the years of depression, 1893 to 1896, the floors of the savings banks unobstructed and clear, while the activity in these institutions during the past year is shown by the number of persons, from ten to a hundred, usually standing in line awaiting their turn on the active days after wages have been paid.

There are now but a few truthful discordant notes to be heard, but it was not until within the last two years that real prosperity on the part of the manufacturer could be recorded. The formidable shock to confidence given to the country in 1893 was far deeper seated than then realized. From that date following year after year for four years prices were gradually forced down to unremunerative values, and had it not been that during this time export markets were sought and found the distress would have been far greater.

It is conceded that the prosperity in trade reached its highest development in the year 1899, and a retrospect of failure statistics for the year 1899 shows smaller business mortality and far smaller liabilities of failing traders than any year since 1887, in which year, however, the gross amount of trade shown by statistics and bank clearings was far less than the banner year of the history of our nation, 1899.

It would be impossible in this short space to enter into statistics of the development of our export trade. The rapid strides and increased totals are startingly apparent and made possible the deluge of statistics of the industrial capitalization during the past year. The long array of figures of these capitalizations of say $5,000,000,000 would probably not be an over estimate. The future effects of these consolidations need not now be discussed, nor could they be intelligently, but they do show the recuperative power of our country when it could swallow without belching this vast array of figures and still be in a position to take up a Russian loan of $25,000,000 railroad bonds and bid upon $50,000,000 English war loan bonds. During this period English consols, which have always been above par value of 100 receded below par, while at the same time

WILLIAM W. SUPPLEE.

United States bonds reach 118 for short time 4 per cent. bonds, and 135 for more recently issued and longer time 4 per cent. bonds. The Financial and Refunding bill recently passed by Congress sets at rest for the present at least the fears of a repetition of the years 1893 to 1896, and manufacturers organized as they are now are not likely in the near future to permit manufactured products to be used as footballs to raise money. Therefore, it is fair to presume that the retention of remunerative prices is likely to continue for a few years at least.

There appears to be but one cloud in the horizon; that is the unfortunate occurrence of our once in four years Presidential election, and in this we are not alone in our

Digitized by Google

regrets that it does not reach us from two to four years later. Confidence is a tender plant, and at this writing it exists in all its full blown splendor to an extent which has not before existed for many years. Why touch its petals with the poison of distrust? William W. Supplee, President,
Philadelphia, Pa. Supplee Hardware Co.

"Comstock's Philosophy."

J. B. Comstock, "The Man in the Corner," who writes the philosophizing trade announcements every month for the Corbin Cabinet Lock Co., New Britain, Conn., gives a whole sermon in the following, from his March letter:

"Blessed be hard work! The sweetest bread a man ever eats is that which follows a day of satisfactory labor; and the softest bed is that which rests and rejuvenates a thoroughly tired body. There is a satisfaction in the very exhaustion that follows extreme effort which has brought results, that laurels lightly won cannot give. Every dearly-won victory gives a greater strength for the next conflict, and it is the successful hard worker who may rejoice as a strong man to run a race. 'Blessed is the man who has found his work,' says the Philistine, and blessed be the necessity, inherent or imposed, that compels him to exert himself therein.

"Show me a man who seeks and rejoices in a 'pull' or yearns for a 'soft snap' and I will show you one unworthy of confidence and content to batten on the brains of some worker. The honest workman needs no support and welcomes the opportunity to prove by his own unaided achievement the stuff that is in him. It is the man with the push who succeeds and makes his mark, when the man with the pull fails in his unequal struggle to maintain a position which he has not gained by his merits.

"The general appreciation of the enjoyment to be found in honest, self-supporting hard work is shown in the contented faces of the army of young women who forsake a life of idleness in comfortable homes to fill positions in stores and offices, and in the restlessness which leads many young men to forego college in order to enter business. It is also shown in the way in which every man who lives in the hopes of the morrow carries his work always with him, and finds his mind reverting to it in all places and times. He often complains of it, just as he does of the weather, taxes, the city government, and his neighbor's chickens; but it is the biggest thing in his life, and he would be lost without it. There is a pleasure in work for the work's sake, whether the laborer wields railroads, pounds a typewriter or keeps the steam gauge steady in the Corbin shops."

New York State Hardware Dealers' Association.

The meeting of the New York State Hardware Dealers' Association held at the Century clubhouse, Syracuse, March 22d, ended with a dinner at the clubhouse same evening. Twenty covers were laid for the members who remained in the city after the business session of the afternoon The dinner was presided over by J. William Black, who is the president of the association, and impromptu speeches were given by the members.

At the meeting in the afternoon the business of the association was transacted. Several features in regard to business methods and conditions were talked over. There was also some discussion in regard to certain legislation affecting the Hardware trade, but no definite action was taken and the members declined to make the questions public.

The association meets five times annually, this being the first time it has met in Syracuse in nearly two years. The officers of the association are: President, J. William Black, of Syracuse; vice-president, Jas. H Boucher, of Rochester; secretary, S. J. Weaver, of Rochester. The representatives who were present were from all parts of the State.

Fifth Annual Convention of the National Association of Manufacturers.

The Fifth Annual Convention of the National Association of Manufacturers will be held in Boston on April 24, 25 and 26 The business sessions will be held in Tremont Temple, Tremont Street, near School Street. The convention will be called to order at 10 o'clock Tuesday morning, April 24, and business sessions will be held morning and afternoon on Tuesday, Wednesday and Thursday. Tuesday evening will be devoted to an informal entertainment of the visitors in order to establish cordial social relations between all present Wednesday evening will be devoted to a public meeting for the discussion of some subject of interest to manufacturers in general. The detailed arrangements for this meeting have not yet been completed.

On Thursday evening the concluding session will take the form of a banquet, which will be tendered by the citizens of New England to the members of the National Association of Manufacturers coming from outside of New England. The banquet will be held in the Mechanics' Building, and will form one of the most important functions of the sessions of the Association. It will bring together not only members of the National Association of Manufacturers, but a large proportion of the membership of the New England Cotton Manufacturers' Association, the National Association of Wool Manufacturers, the New England Shoe and Leather Association, and the American Paper and Pulp Association, all of which have been invited to co-operate in this final feature of the convention.

It is expected that President McKinley will be the guest of honor on this occasion, with Mr. Wu Ting-fang, the Chinese Minister; Comte Cassini, the Russian Ambassador; Hon. John D. Long, the Rt. Rev. William Lawrence, D D., of Boston, and other men of note in public life. Provision has been made for an attendance of about twelve hundred at this banquet, and the arrangements that have been made by the Committee of New England citizens assure the complete success of the event.

The Berlin Iron Bridge Co., of East Berlin Conn , have increased their capital stock to $720,000 and have made extensive purchases in land at Pittsburgh, Pa , where they will start a branch. They have already placed the orders for the greater portion of their machinery equipment, and are now at work on the plans for the buildings, which will be quite extensive, designed and built by themselves at their own shops. It is intended that this plant shall be fully equipped with all modern appliances for doing all classes of steel bridges and structural work; in fact the layout promises that it will be the best plant of the kind in the country.

An ad. that doesn't pay may not be money thrown away. If it's your first, last and only ad., or if it's your only ad. on that particular subject or in that medium, and no returns come in, of course your money has been wasted. But many an ad. that apparently doesn't sell a dollar's worth of goods may do many a dollar's worth of good. It may bring a hundred people within a foot of buying. The next ad. may bring them all to your store, and it may be farther from a good ad. than the first one. It's a long time from seed time to harvest, and there must be much cultivation between times.—*Exchange.*

C. H. Leete, the proprietor of the Potsdam Foundry & Machine Shop, Potsdam, N. Y., has his foundry equipped with Collier cupola and Buffalo blower. In iron and brass casting he is competent to give expert moulding, through careful attention to details. Parties desiring work of this kind done, can have a New York agent call upon them for the necessary particulars.

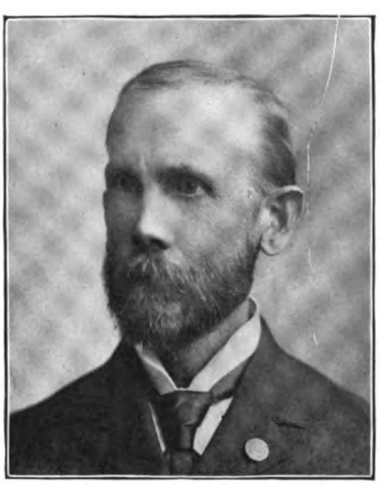
REVIEWING PRESENT TRADE CONDITIONS.

Editor Hardware: It is gratifying to see *Hardware* come to its tenth anniversary with such vigor and evident usefulness. I wish it may continue to grow in demand and continued utility. There was a time when the Hardware merchant knew nothing of a trade journal, and consequently felt little or no need for it. Not so now; but on the other hand it has become a prime necessity. The Hardware business of the present is conducted more intelligently and under stronger competition. This state of affairs has been brought about by the general progress in manufacturing, rapid communication by the press and electricity, and rapid transportation. The business man to-day finds it necessary to post himself about the sources of supply and demand, as well as the labor conditions; the weather, as it affects the great crops, which have their influence on trade; also the rapid changes and sudden changes of the market, and as far as possible foretell what the conditions are confronting him. This is necessary in order to know when to buy and when to reduce stock preparatory to a decline.



All these things, and more, make it necessary that the business man must take time to read and reflect, and here comes the field of trade papers, with their weekly and semi-monthly review of the market and conditions of trade at the trade centres. Business is now done on closer margins than in the past, and requires more careful and intelligent watching. It is now necessary to know what each department is doing, and if there be leaks discover them quickly and stop them. Formerly, when profits were better and competition was not so sharp, the merchant was not required to figure so fine. Another tendency is to do business on a much larger scale. Many merchants have been prosperous and are ambitious, and can now buy and sell on a much more extended programme. They figure that a small profit on a large sale is better than a larger profit on a smaller sale, and this practice makes it harder for the small man who is starting to establish a business.

The tendency among manufacturers is to avoid competition by consolidating and they have astonished the world with their success so far. However, since we have nothing in the past with which to compare this state of things, we naturally fear it is only temporary and that there is danger ahead. When they want to combine, in order to palliate the public mind, they tell how they will be able to curtail expenses, by manufacturing cheaper, by shipping from the point nearest consumption, by curtailing the army of salesmen and their heavy expense account, by the saving of salaries of so many heads of different factories, and yet the very first meeting of the directory after the formation, they raise the price and continue at stated periods to advance the price arbitrarily.

In this way they encourage those whom they have bought out and left with a full purse, after a short rest, to seek a new location and re-enter as competitors; tempted by the handsome profits they see, and thus they must buy them out again or have them as a dangerous element in disturbing the market.

These criticisms may not be felt much while there are orders plenty for all and to spare, but our experience of the past bids us look for dull times again sometime, we cannot tell when. If these people were the philanthropists they would have us believe, then, instead of raising the price of their product sky high, why not reduce the price and give the public the benefit of a part of the excesses they have pruned off? I think this would prove the wise course in the end, since instead of stimulating competition they would discourage it, and they would have the entire field to themselves and thus save the vast sums used to buy off competition or to buy out new factories. I do not expect any of the trade alliances, as popularly called, to profit by what I say, or that I will have any influence in shaping their action, but it is some satisfaction to spread an opinion.

I am not taking a pessimistic view of the times, for I am very much better pleased with the present condition than I was with the one we had prior to 1899; and I only wish that we may have a long stretch of the present good times, when every one who desires to is too busy to have much time to complain; but the fear that they may too soon come to an end, robs the present of part of the pleasure it yields, or should yield. I am endeavoring to prolong this period of prosperity. If we are to judge by

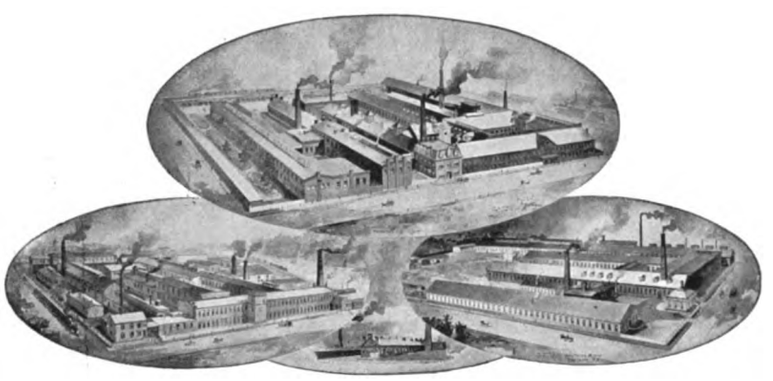
J. D. MOORE.

the fruits, then we may pronounce the present times and conditions good.

Another hopeful sign of the times is, that our country has adopted the Gold Standard, and will command the confidence of the world of finance and trade more thoroughly than ever before, and will put value into our stocks of every kind as well as products of the farm, for contrary to what some of our people thought and predicted, that our circulating medium would be contracted, it has been expanded. As our pig iron, cotton, wheat and lumber go out of the country money comes in, and that, too, of the best kind, and it is the logical result of making our standard of money the best the world knows. This action will hasten the day when the world will draw their exchange on New York instead of London, as is now the case in settlement of bills; and enable our people to price their cotton and other products instead of having to cable to Liverpool or London every morning to know the price.

J. D. Moore,
Birmingham, A'a Moore & Handley Hardware Co.

"Never was glad for this im-impediment in my speech but once," said the man from Dearborn. "When was that?" "Fe-fe-fellow asked me h-h-how much I would take for a a horse, and, while I-I-I was t-trying to tell him t-t-thirty dollars, he offered f-fifty.—*Ex.*



The United States exports more meats and bread-stuffs than any other country.

The Nicholson File Co.

The Nicholson File Co. of Providence was established by William T. Nicholson in 1864, during the Civil War—a time unfavorable for the inception of new enterprises. All previous attempts to establish a machine-cutting file plant had failed, so that the belief had become almost universal among manufacturers and users of files that the hand-made file would hold the field indefinitely. In face of this condition of affairs Mr. Nicholson by his own genius and perseverance successfully developed the industry, until at his death, in 1893, the Nicholson File Co. was the largest file-making concern in the world. That position has since been maintained and strengthened.

The incorporation of the Nicholson File Co. in 1864 represented the utilization of an invention for cutting files made by Mr. Nicholson some little time previous. For a considerable period its progress was slow, but the merits of Mr. Nicholson's invention and the consequent excellence of the company's product at length brought success. The capital of the company was increased from time to time; its plant was enlarged by the addition of new buildings; a factory for the making of "X. F.," or jewelers' and fine workers' files, was built; in 1890 the large American File Co.'s business and factory at Pawtucket were purchased; in 1895 the immense Western File Co.'s works, in Beaver Falls, Pa., outside of New England the largest in the world, came under the control of the company; in 1897 the substantial plant of the McClellan File Co., in Saginaw, Mich , was acquired, and finally, in 1899, the plants of the Buckley File Co. and the Eagle File Co., the latter of Middletown, N. Y., and a concern of national reputation, were purchased, so that now the Nicholson Co. is the largest and most complete file manufacturing concern in the world.

THE NICHOLSON FILE CO.'S PLANTS.

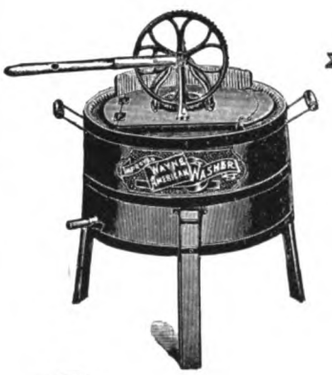
Over 84,000 files and rasps, representing a large percentage of the entire production of the United States, and giving employment to some 1500 hands, are made and finished daily in the various plants. Moreover, every conceivable use for a file is supplied by the 7000 varieties manufactured; every kind of file, from the heavy 24-inch machine file to the tiny watchmaker's tool, less than an inch in length, and whose cut can hardly be detected by the naked eye; from the great, coarse horse rasps to the daintiest of manicure files, all find a place in the manufacture and stock of the company. The "Nicholson" brand, made in the main factory of the company in Providence, is a standard of excellence throughout America. The other four brands of ordinary files manufactured by the company—the "American," "Great Western," "McClellan" and "Eagle," the products of the Pawtucket, Beaver Falls, Saginaw and Middletown branches, respectively—also find high favor among skilled and critical machinists, being strictly first quality, high-grade files, and differing from the "Nicholson" only in the nature of the processes. In the manufacture of the sixth brand made by the company, that of the "X. F." files, a factory adjoining the main one is occupied. These files have been constantly improved and now enjoy a large share of the trade hitherto monopolized by Swiss hand-cut files.

With its extensive capital, large factories, utilization of the most modern methods and inventions, employment of the most highly-skilled mechanics and energetic management, the company feel enabled to meet competition in price from any quarter. The brands manufactured are frequently specified by the United States Government, and are used by a majority of the railroads and the leading manufacturers of the country, as well as by all the technical schools.

As the Nicholson File Co. is the originator of the manufacture of machine-made files in America, so it is the pioneer in their exportation. Owing to their recognized high quality, the brands of the company are meeting with high favor abroad, especially in those markets formerly controlled by English and German files, where they are regularly specified in large quantities by many of the leading houses in preference to the best foreign makes. They are sold to twenty foreign governments, and are found on sale in every leading city and town in the world. The reputation of the concern, the quality of its product, and its close identification with the chief organizations and movements for the extension of America's foreign trade, make its name a factor and influence in the commerce of the world.

Campbell's Varnish Stains.

Carpenter-Morton Co., Boston, Mass., in order to place their salable line of goods upon the market, especially through the Hardware and house furnishing goods trade, have prepared an attractive display cabinet, which we illustrate, and which they present to their customers when a sample lot of the Campbell's Varnish Stains are ordered. They have recently added to the usual sizes previously sold by them a new size can which can be retailed at a popular price. The goods being fully guaranteed and well advertised make a very neat addition to a Hardwareman's stock, and will be found a fast selling specialty.



Many a man has made a fortune through judicious advertising. Take two men starting in business at the same time. One uses all the money he makes in living well, and sometimes even extravagantly. The other invests all the surplus cash that he can lay his hands on in advertising here, there, everywhere that he thinks will attract public notice. What is the result? The man who advertises has crowds flocking to his shop to see the beauties of the advertised goods, and as the public begin to run so will they continue from sheer force of habit. The first shopkeeper will in the meantime be sitting, unthought of and uncared for, aghast at the crowds which daily throng the counters of his competitor, and bitterly bewailing the bad luck which has followed his own venture into trade. Yet he has no one to blame for it but himself.—Chauncey M. Depew, *in N. Y. Journal.*

Arcade Files are the Best

I KNOW FOR I USE THEM

Our assertion that Arcade Files are the best is not a mere figure of speech intended to catch the eye. They really ARE the best—they cut faster, wear longer and represent a better value for the cost than any other file made; and are equal in every respect to the best English hand cut files—because they are made of the best steel that money will buy, and are finished with Weed's Patent Increment Cut, which produces a surface so exactly resembling the hand-cut work that no one can tell the two surfaces apart. If you have never used Arcade Files, send us a trial order, to be returned at our expense if not exactly as we claim. The best mechanics use them and prefer them to any other make for the reason that they cut faster and last longer than any other file on the market.

A REMINISCENT INTERVIEW.

INTERESTING RECOLLECTIONS OF GEORGE H. SARGENT.

HE FORSAKES THE LAW AND ENTERS THE HARDWARE TRADE —A SMALL BEGINNING ON THE THIRD FLOOR—EXPERIENCES AS A TRAVELING MAN, AND COMMENTS RECORDED AT THE TIME.

George Henry Sargent, the head of the Hardware house of Sargent & Co., and now in his second year as president of the Hardware Club of New York, was speaking of his boyhood, and some remark of his led the representative of the *Hardware Dealers' Magazine* to ask: "When you had finished at Harvard, Mr. Sargent, what did you make up your mind to do? How was it that you turned your face toward New York, and how did you become a part of the Hardware trade?"

GEORGE HENRY SARGENT.

"I at first had a professional life in view," was Mr. Sargent's response, "and for a year after leaving college studied law. About that time Daniel Webster died, and I probably had an ambition to fill his shoes, but soon discovered that however well I might do with them, I never could fill his hat. I went into the Harvard Law School, but my brother, Joseph B. Sargent, had started in business in New York, and thought it would be a good thing for me to come down and join forces with him. I saw a place opened before me, and I hesitated. There were so many struggling at the foot of the ladder of professional success; so few who succeeded in reaching the top. It struck me that perhaps I could get nearer to the top in the Hardware trade than in the profession I had chosen.

"J B. had been in New York about two years. He had been educated in a business life; had been in the dry-goods line in Boston, had spent some time in Georgia, and had located here in 1850. His idea was of a purely utilitarian character. He believed that a young man's chances were better in business than in a profession; if very able he might win position and distinction in the law, while in business he would secure an independence financially.

"Well, he advised me to come, and I came. He was located at No. 24 Cliff Street. Russell & Erwin were on the first and second floors; Phelps, Dodge & Co. were on the other side of the street. J B. had the third floor—he had only a little tin sign tacked on the door. He was selling the old fashioned hand cards on his own behalf, and was also agent for Peck & Walter Mfg. Co., of New Britain, Conn., manufacturers of builders' Hardware. We bought them out in 1857, and that was really the beginning of our business. The house in which we were located was an old dwelling, fitted over for business purposes. We had the whole floor, about 20x75 feet, and a sort of an attic above, which we used for storage. I took hold from the first, and speedily became very much interested in the business."

"What did they set you at first?"

"In those days everyone in the business was compelled to transform himself into an all-around man. It was his lot to open goods, to put them up, to sell them, to act as cashier, to be the man-of all-work —that's the way we broke men in in those good old days. I remember that William F. Hyatt, the predecessor of Underhill, Clinch & Co., was with my brother as clerk. People would come to us for goods, and it was his business to sell them all he could."

"How did you like it? Did you still have a hankering for Blackstone and Greek verbs?"

"No; when I got fairly into it I gave my whole thought to it, and worked to the very best that was in me. I received recognition in December, 1854, when the sign on the door was changed to Sargent, Brother & Co.; there was no 'Co.,' but it looked better and sounded better that way. On the 1st of May, 1854, we removed to No. 85 Beekman Street, where we had a whole store to ourselves. Our business had quite materially increased, and we had become selling agents for a number of concerns.

"We both went in and pushed for all we were worth; J. B. ran the office, while I looked after the store."

"Did you ever have any experience in going out for the

Digitized by Google

sale of goods; ever wrestle with the Hardware merchants on the road?"

"I was born, as you might say, into my Hardware life in January, 1853, when as a representative of the Peck & Walter Mfg. Co. as Hardware manufacturers, and my brother as a hand card maker and commission merchant, I presented myself to the Hardware merchants of Louisville, Ky., as an inexperienced and unfledged drummer, with samples of cotton cards, curry combs, and various and sundry other Hardware paraphernalia, after having decided, as I have told you, to abandon the study of law, and take to the woods of a mercantile life, the obscure paths and labyrinthian mazes of which were to me a terra incognita, or, in the vernacular, a terror unknown."

"Louisville was a good point to begin with. Where did you next go? Please tell me all about that first trip."

"Well, as a nine days' wonder to myself," Mr. Sargent responded, "and after exploring the Louisville trade for about nine days, and getting my eyes open to an insight of the idealities of the science of drumming by note instead of by rote, I imagined myself as quite an expert as a forceful persuader, and giving those Louisville merchants a rest, I embarked for St. Louis on steamer *Pike No. 2*—no relation of our staunch Whetstone Pike, who is *No. 1*.

"A pleasant trip down the Ohio and up the Mississippi brought me to St. Louis, January 13, 1854. My journal, 14th, says: 'To-day, from 10 A. M till evening, I devoted myself to the trade, showing my samples and making the personal acquaintance of some of the members of each firm. Buyers generally are east making purchases for the Spring trade, which promises to be very satisfactory.'

"Some of the jobbers of Hardware in St. Louis at that time were Child, Pratt & Co., Shapleigh, Day & Co., Adolphus Meier & Co., Wilson Bros., Haywood, Crow & Talbot, Donelson & Hall, and G. Bremermann, and prominent as retailers were Rudolph & Humes and Julius Morisse. I gave these good and patient gentlemen and their fellow-craftsmen no rest for a few days, when I made glad the city of their residence by departing on steamer *Lady Pike* for Memphis, where, says the diary, 'I called on all the merchants, making pleasant acquaintances, showing my samples and taking some orders.' The jobbers there were Holyoke, Lownes & Co. (succeeded by Lownes, Orgill & Co. & Orgill Brothers), McCombs & Co. and A. J. White. Trade was brisk and cotton was king. I wrote that 'the planters are hauling in their cotton in great quantities, and the levee is entirely covered with the bales around which, as night comes on, the negro drivers, or mule persuaders, were encamped, regaling themselves with their suppers of the standard ration—hog and hominy.' I mentioned that Memphis was finely located, presenting an imposing appearance from the river, and quite a lively business city. Then for New Orleans on the steamer *Lexington* a trip of four days on the Father of Waters, much water at times—too much at any time for Kentuckians.

"Those were steamboating days, and much fun along, racing and betting, big and little gamblers, negro entertainments and every variety of time-killing expedients that could be invented. I was in the pilot house much of the time, and gave the man at the wheel many points, which, of course, he did not see, but looked as if he thought that my navigation presumption indicated a 'wheel in the head.'

"A safe and very agreeable voyage to New Orleans, then lodging at the Veranda Hotel, a canvassing of the trade, and these were rich and prosperous Hardware merchants; those like Slark, Day & Stauffer, Richards, Slocomb & Co. (now A. Baldwin & Co.), and others—all large buyers of cotton cards at $3 per dozen, which in 1864, sold there for $20 for greenbacks. Then to Mobile. From there by boat to Montgomery, up the Alabama River. The railroad was not completed from Montgomery to what is now Atlanta, then a wooded village, so that between La Grange and West Point we had to 'stage it' over the Rough and *Reddy* roads of that section of Georgia. From Atlanta, visiting en route Augusta, Charleston, Wilmington and Richmond, I came to Washington via Acquia Creek, and per steamer on the Potomac from there. In Washington, at a party at the house of Mr. Bailey, editor of the newspaper *National Era*, I met some distinguished anti-slavery men (Free Soilers). Among them were Senators Chase, of Ohio, and John P. Hale, of New Hampshire, and some prominent women in the ranks of the abolitionists. In the Senate at that time were Jefferson Davis, Sam Houston, Stephen A. Douglass, Hannibal Hamlin, Lewis Cass, John P. Hale, Seward, Chase and Sumner—Whigs, Democrats and Free Soilers. No one of the sixty-two members of that Senate is now living. From Washington I came to New York.

"I also had my regular trips through New York State, and some portions of the West. The old Hudson River Railroad would carry me to Albany, and the New York Central over to Buffalo. Then I would come home on the Erie, thus taking in a new section of the country. I always went out with an expectation of making sales, and pleasantly recollect the fact that I brought home my share of the business.

"You see, in those days there was something else to attend to beside the mere selling of goods. We had no commercial agencies to establish ratings; no credit men, whose sole business was to keep informed as to the financial standing of customers. The salesman on the road had to look after all that; it was his province to decide to whom to sell, and to see that the house got its money. I have in my possession to-day the diaries I kept in those days, showing not only all the facts I could glean about each customer, but the size and population of the town, its importance as a business centre, and anything else that could throw light on the situation."

In the course of the conversation Mr. Sargent had searched the inner recesses of his desk, and brought to light several documents that he had not thought of for years, but which the preceding remarks had recalled.

One of these was one of the small memorandum books referred to above. Another was the transcript of his bill of expenses for the period running from May 13 to August 13, 1854

The latter was upon a single sheet of the old-fashioned blue ledger paper, the entries being in black ink, and standing out as clear and distinct as if written but yesterday. One curious thing was noted—that Mr. Sargent's handwriting had remained unchanged through a period of forty six years.

A few figures as to expenses, railroad fares, and the salary paid an expert salesman, may be collated from this old sheet as an indication of the changes that have occurred in these passing years. This trip of three months covered a great deal of territory. He left New York for Norfolk, Va; then on to Petersburg, Baltimore, Washington, Wheeling, Columbus, Cincinnati, Louisville, Lexington, St. Louis, Keokuk, St. Paul, Milwaukee, Chicago, Detroit, Toledo, Cleveland, Buffalo, Toronto, and thence on home to New York. A great many smaller towns and cities between or near to those above mentioned were also visited. The total expense of this trip, which included hotel bills and railroad and steamboat fares, was $291.70, to which these figures for extras in three months must be added:

Postage and stationrey	$1.50
Cartage of samples	2 00
Business cards	1.75
	$5.25

Two other entries are of especial interest. They show that board in New York cost Mr. Sargent $4 per week,

Digitized by Google

and that he was in receipt of a salary of $800 per year, payable semi-annually.

The railroad fare from New York to Norfolk was $8 50; Louisville to St. Louis, $8; Milwaukee to Chicago, $3; Chicago to Detroit, $7.25; Detroit to Toledo, $3; Toledo to Cleveland, $3; Cleveland to Buffalo, $2.75.

The memorandum book referred to above is an interesting document.

In that Mr. Sargent set down the information he gleaned in each town as to the Hardware merchants, their financial standing, promptness of payment, trustworthiness—which in this case literally meant worthy of trust—methods of buying, etc. The comments were decidedly terse; sometimes a little sharp, and always lucid and positive. The book is sufficient evidence that its maker's later success in a business way was not a matter of chance.

Pinned to the cover was the business card, which the young man carried with him.

The comments in this little book make interesting reading, in view of the changes that have occurred in the almost fifty years that have passed between that day and this. Here are some of them:

Poughkeepsie, N. Y.

Allen & Storm; formerly Jos. E. Allen, Storm with Sears Adriance & Platt, N. Y., until last April. Are making money and considered first rate.

Storm & Uhl: Old, slow, and sure. Good for all they will buy. Storm is grandfather of Allen's partner above.

Albany, N. Y.

Roswell Steele: good for all the Horse and Curry Cards and Combs he will buy, and some more that he probably will not buy.

Utica, N. Y.

Thomas Foster; Doing first-rate business. Store looks well. Prime man, and anybody would be glad to sell to him.

Dana & Co.: Stiff enough. Mr. D. is of the firm of Dana & Maynard, lock makers.

Rome, N. Y.

Harman Emerson: A young man, active and industrious. Store looks well, and businesslike. He has recently built a dwelling house, and is considered in good circumstances.

It will be noted that a well-kept store made an impression upon Mr. Sargent. That fact is mentioned very often in this record. He also made a point of finding out where people bought their goods, when they were not customers of his. Many of these names suggest men well-known in the trade to-day, like those which follow:

Syracuse, N. Y.

Murphy, McCarthy & Co.: Apparently the busiest and one of the most prosperous houses in Syracuse. Murphy formerly clerk in Syracuse. They give no notes, but willing to pay a bill when due.

Buffalo, N. Y.

Pratt & Co.: The largest Hardware house in this country, with perhaps one or two exceptions. $400,000 capital invested. Sold $1,250,000 worth last year.

Sidney Shepard & Co. (no comment).

De Witt C. Weed (no comment).

Chicago, Ill.

Edwin Hunt, branch of New York store: Is supposed to be doing good business. Has some country trade. Buys through his agent in New York, where his responsibility is known.

These quotations are characteristic of the entire memorandum book, and are sufficient to illustrate the thoroughness of his methods and the plan pursued in those days.

Some of Mr. Sargent's comments on the cities he visited are entertaining, and a comparison of his conclusions with the conditions of to-day will measure his qualities of prophecy.

Of St. Paul, Minn., he said: "Population, 5000. Excellent point for business. Head of steamboat navigation of the Mississippi. Has gone ahead rather too fast recently, and there may be a reaction."

Milwaukee, Wis.: "Is a very favorable point for trade, and a fine location for a city—high, uneven and airy. Is in a prosperous and flourishing condition, steadily and surely going ahead. Population nearly 35,000."

Of Chicago, unfortunately, he makes no comment or prophecy.

Alton, Ill.: "Is too near St. Louis to become much larger than at present." Peoria, Ill.: "Population of about 11,000; which will not stop inside of 20,000." Quincy, Ill.: "An old place, and the prettiest town or city on the river. It is settled mostly by Eastern people and shows its origin." Keokuk, Ia: "A beautiful, rich, and fertile prairie country around it, comprising some of that land which the Lord is said to have finished." Davenport, Ia.: "A mushroom town. Bound to become quite an important point. Land held at St. Louis prices." Galena, Ill.: "Is a rich, active and enterprising place, but an ill-looking and unhealthy city."

Coming again East, we find these comments: "Schenectady, N. Y., population 9000. Will always be in the 9 hole." Utica, N. Y.: "Is old and rather wealthy, and hence slow." Rome, N. Y.: "Doubled in four years. All men and women do their duty, and some must overdo." Watertown, N. Y.: "One of the finest and smartest towns that Uncle Sam owns." Lockport, N. Y.: "Will never 'bust its biler.'" Ithaca, N. Y.: "Has been in *statu quo* about ten years, and will be about the same for ten years."

Here are a few disconnected and pithy comments from the same source—towns and business houses being here left unmentioned: "Good, clever, keen, honest Yorkers. Slow, but rapid enough for this snail-paced town." "Mr. C. is slow and not very capacious," "Knows what he is about, but doubtful if he ever knows much more than at present. He doesn't know Young America." "Will never set Erie Canal in a blaze." "A close business man, industrious and careful. Looks out for the half cents." "Moderate, and very amiable." "Old and stiff; buys of R. & E. Mfg. Co., and cannot be choked off." "Mr. K. is as sociable as an oyster; very affable and courteous—over the left." "Is not much of a business man, but may have made as much out of his recent failure as anyone." "Gets a good living, and that is something." "Have a large stock on hand, partly in consequence of their Spring goods not arriving until after the trade was over—a general complaint in this county" (This was in Chicago).

Mr. Sargent discontinued traveling in 1855. His firm broadened out in its scope and character very rapidly and he was needed at home. The later history of his house is so well known that it need not be followed here.—*Hardware Dealers Magazine for April.*

Grand American Handicap, 1900.

This was won by the Union Metallic Cartridge Co.'s Machine Loaded Shells. Note these figures taken from official record.

Number of shooters facing traps		211
Number of shooters using U. M. C. Shells	118	
Number of shooters using shells made by 6 other manuf'rs.	93	211
Number of shooters making straight scores		8

Of this number 7 used U. M. C. shells, winning $2,113.75.

Comments are hardly necessary. Ask for U. M. C. Machine Loaded Shells and send for list.

Bridgeport, Conn. THE UNION METALLIC CARTRIDGE CO.

To have an invention protected all over the world it is necessary to take out sixty-four patents in as many different countries, the estimated cost of which is about $17,500.

Another Reminiscence.—Mrs. W.: "Before we were married you said I was the only woman in the world." Mr. W.: "Yes; and I must have believed it."—*Ex.*

Advertisers' Corner.

Let your show windows do night work; it is the best and cheapest working force you can secure.—*Music Trade Review.*

Business literature is a solicitor of business, and should be well dressed. So presented, it secures attention which would not be accorded otherwise.—*Printers' Ink.*

The Woman: Can you match this piece of ribbon?
The Man: No, lady. You may remember it was one of the matchless bargains we ran last Monday.—*Rhode Island Advertiser.*

Don't forget that half the success in the mail-order business is to have a good man to answer the man who answers your ad. or you won't get an answer to your answer. —*Boyce's Hustler.*

There is no possible way of making advertising too plain. The plainest kind of plain language doesn't seem to be strong enough to penetrate the intelligence of a great many eaders.—*Stoves and Hardware Reporter.*

The ethics of successful advertising may be stated in hese few words: The continuous making of promises, writing these promises in such a style and placing them in such positions that they will be read—and lastly, keeping the promises!—Frederick D. Hull, *in Pittsfield (Mass.) Call.*

An ad. ought, above all things, to be natural. It ought to sound as if somebody were talking. There should be no apparent effort to be colloquial. It is better to be stiff than to be colloquial awkwardly. If you can't be easy in your advertising, don't try. If it isn't natural for you, don't try it.—*Texas Publicity.*

If advertisements are not read it is the fault of the advertisers. They must be made interesting. Brains pays as well in the advertising columns as on the editorial page. The lack of judgment and knowledge in the advertising columns is why so many ads. fail to attract attention and draw trade. Farm your space diligently, carefully, thoughtfully. Make it pay you.—*Merchants' Gazette.*

Illinois has a law forbidding the use of the American flag for advertising purposes. This law the supreme court of Illinois has pronounced unconstitutional as an unreasonable interference with personal liberty, and one not warranted by the police power of the State. As to the sentiment involved, the court holds that a dignified and proper treatment of the flag must be left to be enforced by public opinion.—*Bowling Green (O.) Sentinel.*

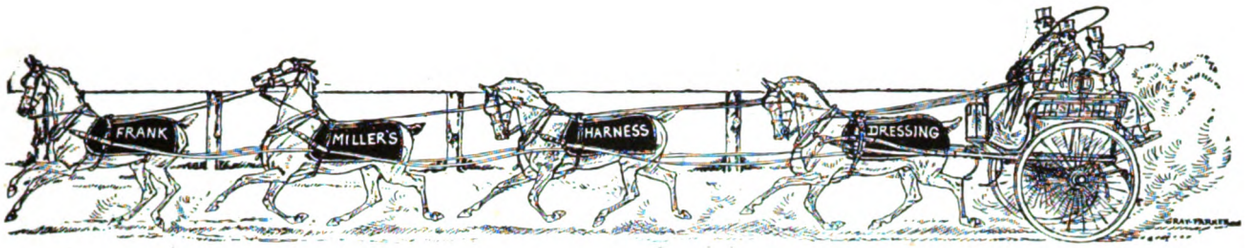
The newspapers of larger cities are a veritable mine of hints for the local retailer, if he will read them carefully and use their contents intelligently. There are hundreds of apt phrases and tricks of expression which serve to brighten up the advertising and make it interesting. There are arguments that the retailer himself would not think of. All these are good material for the advertiser to study and to use when they are appropriate.—*St. Louis (Mo.) Grocer.*

Good display can be obtained with two or three styles of type. More than this number should seldom be used. Good, strong headlines, with plain body matter, make good display. White space sets off an advertisement much better when it is all in one or two places than it does when scattered helter skelter among a number of lines of different-sized type. Headlines which are set with capitals and small letters are usually more attractive and easier to read than those set entirely with capitals.—*Iron Age.*

The "short cut" is distinctively a nineteenth century invention. Among the latest are schools for advertising experts. Given a clerk or farmer's boy, or a fairly intelligent hod carrier, some of these new institutions will agree to transform him, by a peculiar occult metamorphosis, into a fully competent advertising genius, versed in all the rules and lore of the art, and fit to handle any sort of publicity proposition, from a simple four-inch single-column retail ad. to a hundred thousand dollar patent medicine appropriation. Natural ability, education and previous occupation are small factors so long as the aspirant has the requisite tuition fee. The latter is the only important item. Let him have that and he will be welcomed with open arms, conducted to the hopper of the marvelous advertising expert machine and started on his way through it, to come out a fully accredited ad. writer or manager, skilled in all the ways of the craft.—*Ad. Sense.*

Imports of Manufacturers' Materials.

The manufacturers of the United States are the most active among our importers at the present time. In the month of February, the details of whose commerce have just been presented by the Treasury Bureau of Statistics, manufacturers' materials amounted to almost one-half of the total importations, if we include under this term the importations classified by the Bureau of Statistics as "articles wholly or partially manufactured for use in the manufactures and mechanic arts." The total importations in the month of February were $68,774,150. Of this amount $25,936,601, or 37.71 per cent. was classified by the Bureau of Statistics as "articles in a crude condition which enter into the various processes of domestic industry," which of course entitles all of these to be classified as "manufacturers' materials." Following this comes another group of $6,732,437, which the Bureau classifies as "articles wholly or partially manufactured for use in the manufactures and mechanic arts," which it seems to be proper to also classify as "manufacturers' materials." This gives a total, therefore, of manufacturers' materials amounting to $32,669,038, or 47½ per cent. of the total importations. Thus it may properly be said that practically one-half of the foreign productions coming into the United States at the present time are for use in the factories of the United States. To this may be added another statement that another quarter, practically, of the importations coming into the United States are articles of food, most of which cannot be produced in the United States in sufficient quantity for the use of its population, the February importations of "articles of food and live animals" having amounted to $16,254,153, or 23.63 per cent. of the imports for that month.



Taking the eight months ending with February, it is found that articles of food formed 25.15 per cent. of the total imports; manufacturers' materials, including the two classes above named—articles in a crude condition and articles wholly or partially manufactured for use in the mechanic arts—amounted to 45.62 per cent.

Thus, while importations have materially increased, it may be said of them that practically one-half are materials for use in the factory, one-fourth for food, and the other quarter manufactures and luxuries.

Awful!—Old lady: "I hope my next joint will be better cut than what you have brought lately." Butcher boy: "Oh, yes, mum; joints will be prime, 'cos master says he's going to kill hisself next week!" Old lady: "My goodness, boy!"—*Ex.*

An inmate of a lunatic asylum was visited by a relative, who asked if the clock in the room was right. "If it had been all right do you think it would have been here?" was the unexpected reply.—*Ex.*

VISES

The wellknown and reliable

Parker Vises

are used in all countries and for all purposes where such a tool is required. We make them for the Machinist, Blacksmith, Plumber, Carriage Maker, Carpenter and Jeweler.

36 Styles. 120 Sizes. No shop complete without a Parker Vise. Send for Catalogue.

WOOD SCREWS.

We make a full line of Steel and Brass Wood Screws under the Brand of The United States Screw Co.

These goods are made of the best material obtainable; are manufactured by the latest improved machinery and are in every way desirable.

THE PARKER GUN.

Celebrated for its excellent qualities and Shooting Record.

Thousands of the Parker Guns are now in use by all classes of Sportsmen. Many of the best records at the Traps have been made with this reliable Gun. Made like a watch; every part as near perfection as it is possible to attain. If interested in Field Sports do not fail to examine the *PARKER* before purchasing.

COFFEE MILLS.

After more than 60 years experience in the manufacture of Coffee Mills we claim the most complete line of desirable goods in the market. Box, Side, and Store Mills in great variety. We are sole manufacturers of the *BALL BEARING MILLS,* the easiest running, best grinding Mill in the market. Covered by Letters Patent.

Anvils Have Known Little Change.

An article on "Anvils," written by W. B. Patterson for the Pittsburgh *Dispatch*, sets forth the claim that 80 per cent. of the anvils used by the American blacksmiths are those turned out in Liverpool and stamped "Peter Wright." Pittsburgh capital is considering the question of establishing a factory to produce anvils of wrought iron. Mr. Patterson goes into anvil history, of which we make the following extract:

"Only three concerns in this country make any endeavor to capture the home trade, and their work is to-day that of a missionary nature—for the American smith is skeptical when praise is given to any anvil other than that conceived by the English manufacturer. Peter Wright's anvil is the standard throughout the world. Its prestige has been maintained for generations. The son of a blacksmith follows heredity and swears by 'Peter Wright,' much in the same manner as the son of a stanch Whig clings to Republican principles and scoffs at innovations.

"Anvils and Wagnerian music are in the same category. You can tell both by their 'ring.' You could no more deceive a blacksmith with a modern anvil than you could a lover of Wagner's compositions with the melodies of Stephen Foster.

ANVILS NEVER CHANGE.

"Anvils have been immediately associated with the progress made in the industrial arts, but the anvil itself remains unchanged; the style of to-day is that which was in vogue half a century ago. Longfellow's smithy used a Peter Wright anvil, and in one of Emerson's essays you will find distinct references to the standard output of the old Englishman who died many years ago, but whose name still lives among the horseshoers and tinkers of many a village shop.

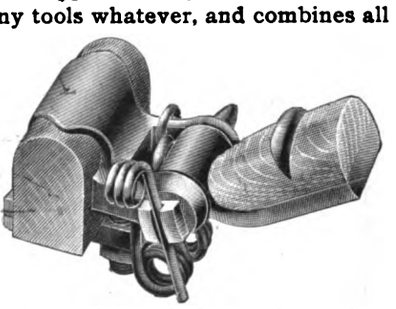
"When the writer learned that Great Britain monopolized that trade, he wished to assure himself that Pittsburgh (not America) was able to go the British 'one better' and manufacture a product of this kind that would stand a more thorough test and sell for one half of the Peter Wright price. These questions were put to James H. Baker, of this city, the other day. Baker began life as a blacksmith in the mountains of West Virginia, and has been engaged in the iron industry ever since, having organized and brought to a successful standing the forge company of Ellwood City, and the chain works of Allegheny, each one of which bears his name.

"'What do you know of anvils?' was asked. 'Can't Pittsburgh brains compete with those of England and put forth a better, cheaper and more up-to-date anvil?'

"'I believe so,' he said. 'The American trade is supplied and has been for years, by the Peter Wright anvil. There are only three establishments in this country where they are manufactured, but not in large quantities. Nevertheless, I believe American enterprise can easily triumph over the British product, despite the fact that a vast amount of missionary work will have to be done.

"'We were told a few years ago that we could not make tinplate in the United States against Wales. This was also the case with tool steel, chains, cutlery, ships, guns and other lines in which the English were supreme at one time. Some people even voiced the belief that we were not able to master Spain. I am of the opinion, though, that anvils will be made in this country by modern methods and at a price at least one-half of that of to-day, and that they will be superior to any that are now upon the market. A few years hence, I think, will find us with a big export trade in this very line. The steps leading to a reduction in the cost of making anvils are obvious to the man versed in the art of forging. For, let me say, forging is an art, and Tubal Cain was not the least in the line of men who have wrought for the world's advancement.

HOW THEY ARE NOW MADE.



"'Just here it is pertinent to state that the anvil meant is that of the blacksmith. These were formerly made by welding a piece to the main part, or body, for each projection, such as the horn, and the toes at the base. They are now made in three or four pieces—the base, or lower half, next the top part, having the horn at one end and a projection at the other, where a hole is placed. Then the steel is welded on the face, and, lastly, the two main parts are welded at the part known as the waist. In England it is the practice to weld the steel on in two pieces. That is, if the face has to be 12 inches long, then the two pieces of steel are each 6 inches long. In this country only one piece is used for the face, Then the anvil is ground, hardened and ground again, painted and the canvas sewed around it. Then it is ready for sale. Besides the hole or holes in the face of the anvil, put there to hold small tools, anvils have a blind hole in each end at about the center, and one in the bottom, placed there for the convenience of handling. If you go to buy one to-day you will find that the face of one of a general given weight is 4⅜ inches wide, and another 4¼ inches wide, while another will be 4½ inches wide. Again, as to weight, they vary equally as much. This alone would condemn present methods of making or, in other words, show them to be hand made. When they are made by machinery a given size will weigh practically the same.

THE RING AN IMPORTANT FACTOR.

"'It need not be said that cheap manufacturing and uniformity of sizes go hand in hand. This reasoning explains in a small way why armor plate is so many times higher than steel rails, even allowing for the difference in the quality of the steel. When the faces and horns of anvils of a given size are uniform then it will be possible to sell cheaply many useful tools which will fit to them Again, the ring of an anvil is an important factor, however much you may call a man a crank for demanding it. The heavy Hardware trade of this country knows too much to put money into anvils that will not ring. A good deal of money and energy has been spent making cast iron anvils with steel faces, and some commendable work has been the result; but the lack of a right ring literally, showed that they did not have the right ring figuratively.'"

Eclipse Shaft Coupler.

The Eclipse shaft coupler, shown herewith, is being placed on the market by Jno. W. Bell & Co., of Mercer, Pa. This device consists of a steel bolt of special pattern, and a wire spring which acts as an anti-rattler and also holds the bolt securely in place. The springs are made of a superior quality of tempered steel wire, retinned. This coupler may be applied to any vehicle, new or old, without the use of any tools whatever, and combines all the advantages of a quick-shifting shaft coupler and an improved anti-rattler. The spring and bolt are interlocking and make it absolutely secure. They are designed to be marketed at a low price, which, with their advantages as a quick-shifter, and their adaptability make good strong talking points, and they afford both the jobber and retailer a fair margin of profit. The manufacturers state they will be glad to mail a sample pair to any one interested upon receipt of twenty-five cents.

Recent Trade Publications.

SCHNEIDER & TRENKAMP CO., Cleveland and Chicago. 1900 catalogue of Reliable Gas Stoves and Ranges made by this company. It is a 100-page pamphlet catalogue printed on coated paper, handsomely illustrated throughout with wood cuts and half tones, showing in all their artistic elegance the superb line of gas ranges with which the name of this company has been associated for many years, which includes in the assortment gas stoves and ranges, combination coal and gas ranges, gas heating stoves, radiators, parlor grates, hot plates and laundry stoves, together with paint burners, kitchen boiler heaters and instantaneous water heaters. The descriptions are thorough and complete throughout, list prices are given on everything shown, and altogether it is an extremely complete and welcome catalogue to the dealer handling such goods. Included with the above we also received a catalogue of similar size, covering 100 pages, illustrating and describing their line of Reliable vapor stoves and Blue Flame oil cooks. This is similar in artistic elegance to the catalogue previously mentioned, but refers entirely to this special line of goods, which is already a large and extended line, covering as it does vapor stoves and ranges, steel ranges, combined coal and gas ranges, Blue Flame oil cook stoves, oil heaters, gas heating stoves, radiators and parlor grates, hot plates and laundry stoves, paint burners, etc. Included in the assortment are tinners' and plumbers' furnaces, vapor and oil torches and vapor and gas ovens with burners of every description. This catalogue is complete in connection with this line of important goods, giving as it does a telegraph code covering every portion of it, and showing in great variety the separate appliances called for in connection with the same. The above company have also issued a 12-page booklet in very attractive style, of envelope size, designed to be distributed by their customers undoubtedly, showing a large number of their specialties, attachments and appliances, such as instantaneous pressure water heaters, water heater stands, brackets and spray, which are used in connection with their Reliable gas ranges and kitchen boiler heaters, all of which are illustrated in this booklet, and described in a manner readily understood.

DANGLER STOVE & MFG. CO., Cleveland, Ohio. 1900 catalogue of the Gem Wick and Wickless Blue Flame Oil Stoves. Sixteen-page catalogue, with fine half-tones, and printed on coated paper, devoted entirely to the display of these goods, which are shown in all the various combinations in which they are sold, including the three, two and one burner, with and without oven, and in both the low and high shape and design. Included in the catalogue is also a list of parts of the stoves here illustrated, giving prices for every particular item used in construction, so that repairs may, if necessary, be readily accomplished. In the same connection is their 1900 catalogue of High-Grade vapor stoves, ranges and specialties. Twenty-four-page catalogue similar to the above mentioned, and covering in its contents this large line of goods, which is meeting with great success throughout the country. These goods are very handsomely shown by the aid of half-tone illustrations, covering the various combinations formed by adding ovens, etc., wherever necessary, and with and without ornamental nickel base and other adornments, from the perfectly plain up to the highest and latest styles. Included in the assortment is a large line of Junior stoves, similar in operation, plainer and less ornamental in style; also a line of furnaces and torches for plumbers' and tinners' use, for which there is more or less demand throughout the country.

TORRENT PUMP CO., Cleveland, Ohio. Pamphlet catalogue, covering their line of purifying pumps, chain pumps, water drawers, suction pumps, wood force pumps, well buckets, pitcher spout pumps, etc. These are shown in large variety. Included in the contents are a few of the specialties for which they are noted, including the "Acme" riveter, Wadsworth's sprayer, thresher tank pumps, etc.

Andrew Carnegie's Fortune.

The accumulation of a great fortune through industrial enterprises, as stated in the *Engineering and Mining Journal*, requires genius, opportunity, hard work and sacrifices of various kinds. The genius may be that of invention or that of administration—more frequently the latter, considered as including the faculties of recognizing business conditions; of wiseiy choosing localities and methods; of knowing when loss exists or is threatened; of acting with wisdom and courage for the protection of business interests, and of dealing successfully with men. These gifts may be exercised unscrupulously, no doubt; yet it is certain that in the long run honesty pays, though honesty alone, without capacity, is not a sufficient basis for success. And nothing is more wicked and silly than to assume that success implies dishonesty. In fact, great wealth is never gained in industrial enterprises without conferring still greater benefits upon the community. We will take as a text for further comment the fortune of Andrew Carnegie.

Mr. Carnegie began without means. He gained his opportunity by winning, as an humble subordinate, the appreciation and confidence of his employers. Opportunity almost always comes through the favor of somebody, and to earn such favor by thinking of one's duties rather than one's rights, and by giving more than one receives, is a factor of success in life which will remain omnipotent under any form of social organization.

Moreover, Mr. Carnegie had the advantage of learning the business system of the Pennsylvania Railroad, one of the most thorough and wise ever organized; and, in other spheres, he carried into effect with suitable modifications in application the principles of that system.

Of these, perhaps the most important are the employment and liberal remuneration of the best technical and administrative talent, the bold adoption of new improvements, the enforcement of a strict responsibility, coupled with a just appreciation of service and its reward according to merit, and the maintenance of a vigilant supervision, securing such justice to every employee, from top to bottom of the vast system.

The first and second of these principles are illustrated in the history of the great Carnegie steelmaking enterprises by a long list of illustrious technical inventors, advisers and directors, whose ability has been promptly recognized, liberally rewarded and effectively employed by the business management, and by a corresponding list of new improvements, which have been introduced at the cost of millions of dollars for installation and experiment, and the further cost of millions, represented in the abandonment of old machines and plants, not yet outworn, and still deemed "good enough" by business competitors. These courageous expenditures and sacrifices have kept the Carnegie establishments "at the head of the procession," enabling them to realize a profit or avoid a loss at times when other concerns could not do so.

But it is to the other principles mentioned above—namely, the maintenance of a strict responsibility, based upon an unremitting and thorough inspection, that we wish to call special attention. For it is at this point that great industrial enterprises usually break down. Up to a certain degree the successful business manager carries much of his business "in his own head;" forms his judgments of employees from personal acquaintance with them, and, while he has learned the necessity of purely commercial book-keeping, does not realize that technical book-keeping is equally important. When he "loses his grip"

Digitized by Google

on the larger operations he is not ready to pay for the organized system which must then supplant individual knowledge, what it is really worth. He may require technical reports from his superintendents and foremen, but he does not comprehend the importance of the daily compilation and study of such data by separate officials.

Some years ago, when the Carnegie establishments were making about 2000 tons of steel a day, the writer had occasion to learn something of their auditing department and found that this department comprised, besides its general director, a large force of clerks who had nothing else to do than to receive, scrutinize and tabulate the daily returns from every part of the business. If a single furnace turned out on a given day a smaller product than was expected from the amount of raw material charged to it that fact was instantly noted and investigated until its cause had been ascertained. Specially good work was similarly noted and the credit due to it was located, and every day a detailed statement of the whole technical work of the day before was tabulated.

Now, in a general way, and after a fashion, this sort of thing is done, or supposed to be done, in all large manufacturing establishments. But, as a general rule, the necessary statistics are furnished by the men who do the work and who are not specially interested in exposing its little temporary shortcomings. Their indifference is due to two chief causes. In the first place they are fatigued with the daily work and in no condition to give fresh vigor to the compilation of statistics, which they accordingly make up, if at all, in a perfunctory and general way. In the second place they know, too often, that there is at the central office to which they report nobody who regularly and continuously scrutinizes their reports. Once in a while, when inventories are taken and balance sheets prepared, they may be called to account for the general result of their work. If it shows a profit they will be congratulated, if it shows a loss they will very likely be blamed; though in the one case the profit may be much smaller than, with better management, it would have been, and in the other case the loss may be much smaller than, without their anxious and skillful labors, it would have been. The traditional maxim of employers has been, "We want results, not explanations;" its application has often injured the reputation, while it discouraged the ambition, of the ablest and most devoted professional experts. In short, an elaborate system of technical reports and bookkeeping is of little use, unless it be operated by a special corps, which has nothing else to do, and which does that one thing thoroughly.

At that time the chief of the auditing department of the Carnegie business was paid a certain percentage on the total business done, and his remuneration for the previous year had been $80,000 His chief clerk received a large salary ($5,000) and the rest of the clerical force was liberally paid. Probably more than $100,000 a year was thus spent upon a department which produced nothing, but merely scrutinized and criticized. At that time the market was not very good, prices and margins were low, and many concerns were barely covering expenses. But Mr Carnegie estimated that the auditing department of his business was saving by its vigilance $3 per ton on the steel manufactured and this amount represented all, or more than all, the profit of the business. Indeed, such a saving on the cost of a ton of product was more than the largest profit dreamed of by manufacturers generally. In this particular case it would be over $2,000,000 a year.

At that time probably no other great concerns outside of the railroad companies had ventured upon so elaborate and expensive a system of technical accounts. Many no doubt have since adopted such systems, and all the great industrial combinations must do so or fail.

In conclusion, it only remains to say that a man or concern realizing a profit in this way, and without reducing the wages of workmen or enhancing the price of products, is honestly entitled to that profit, whether it be one million or many, and to the thanks of the community besides For the accumulation of wealth by the prevention of waste is a benefit to all and an injury to none.

The Oldest Wheel in the World.

Every orthodox wheelwright knows that the earliest vehicles on record were those which Pharaoh misguidedly drove into the Red Sea. Even John Taylor, the first and most formidable foe to all wheeled contrivances, in his bitter arraignment of the early hackney coaches of Queen Elizabeth's time was constrained to make this puritanical concession to Bible lore: "'Tis to be supposed how Pharaoh's chariots that were drowned in ye Red Sea, were no other things in shape & fashion, then our Coaches be in this time, and what sore pitty is it, that ye makers and memories of them had not been obliviously swallowed in that Egyptian downfall?"

For a wonder the most learned archæologists, as well as the devoutest of theologians, are inclined to agree with the simple wheelwrights that the Egyptians were indeed the first men versed in the art of carriage making. Ezra Stratton, the author of the most exhaustive English book on the subject, thinks with Aristotle that the ancient Egyptians evolved their chariots from sledges, similar to the horse-drawn tepee poles of our North American Indians, by dragging them over solid rollers.

As it happens, a perfect specimen of an Egyptian hunting chariot is preserved in the Florentine museum, which proves that these early sculptured pictures are singularly correct in detail. A still more valuable piece of proof is the fragment of an early Egyptian war chariot found in a mummy pit at Dashour, which is now preserved among the most precious relics of the New York Historical Society.

It is a wheel two feet eleven inches high without and three feet three inches with its wooden tire. The hub, which is fourteen and a half inches long, five inches through the middle, and four and a half inches at the ends, has not the least appearance of ever having been burdened with an iron box, and the jagged pin ends look as though they had undergone many hard rubs from the linchpin (probably a wooden pin) while revolving around the axle tree. On the face of it it is quite clear that this particular ancient wheel rotated around its axle and not with it, as some learned archæologists would have us believe.—Edwin Emerson *in the Automobile Magazine.*

How a Letter May be Recalled.

Many times people would like to recall a letter after it has been mailed. This can be done, even if the letter has reached the post office at its destination. At every post office there are what is called "withdrawal blanks." On application they will be furnished, and when a deposit is made to cover the expense the postmaster will telegraph to the postmaster at the letter's destination asking that it be promptly returned. The applicant first signs this agreement: "It is hereby agreed that, if the letter is returned to me, I will protect you from any and all claims made against you for such return, and will fully indemnify you for any loss you may sustain by reason of such action. And I herewith deposit $— to cover all expenses incurred, and will deliver to you the envelope of the letter returned." In many cases persons have made remittances to fraudulent parties or irresponsible firms, not learning their true character until after the letter had gone, and have succeeded in recalling them. There is an instance where a Kansas City merchant had remitted a dishonest traveling man a draft for $175, and by means of a withdrawal rescued the draft just in time.—*Globe-Democrat.*

Death of John Alling.

John Alling, one of the pioneer Chicago wholesale Hardware merchants, died of pneumonia at his home, No. 2207 Calumet Avenue, Chicago last Wednesday morning, aged seventy-two years, after an illness of two days. He was born at Madison, Ind., and was thirty-five years old when in 1863 he came to Chicago to engage in business. He formed a partnership with Robert Buchanan and the firm conducted a Hardware store at No. 47 Lake Street, the firm name being Buchanan, Alling & Co. Lake Street was then the principal retail street in the city. A year later Mr. Buchanan sold his interest in the business to John A. Markley, and the firm became Markley, Alling & Co. It remained unchanged until 1895, when it became John Alling & Co., and in 1898 Mr. Alling sold his business to Hibbard, Spencer, Bartlett & Co., retiring from active life at the same time. For many years prior to the final sale of his business Mr. Alling had ranked as the oldest Hardware man in Chicago. His business had grown from a small retail trade to one with both wholesale and retail branches of large importance.

Mr. Alling left three children. They are Miss Elizabeth C., Miss Cornelia P. and John Alling, Jr. All live at the family residence.

Automobile Postal Service.

As the main object of the Post-office Department is to provide for the safe and prompt transmission and delivery of mail matter, and as the officials who are entrusted with the administration of this important branch of the public service, as well as the legislators who provide for its maintenance, desire that it shall be constructed on strictly business principles, the different bureaus of the Department are constantly considering new inventions and devices which may prove of value, either by increasing the efficiency or diminishing the cost of the service.

The appearance on the streets of our cities of motor driven vehicles, and their employment by business establishments as delivery wagons, has suggested their use for the collection of mail from street letter boxes. The subject has been brought to the attention of the Department, not only by manufacturers and agents, who desire to further their own interests, but also by postmasters, who believe that this new departure in locomotion will aid them in solving one of the mast difficult problems which the free delivery service in large cities presents—that is, the improvement of the collection service by providing for more frequent collections of mail from street letter boxes, and for more prompt and rapid transmission to post-offices and stations. This service is now performed by letter carriers, and is costing the Government over four hundred thousand dollars ($400,000) annually for horse hire and contract wagon service, in addition to the salaries of the carriers.—First Assistant Postmaster Heath *in the Automobile Magazine.*

A Miraculous Boiler.

"Whenever I think of a boiler I saw over in Texas, the other day," said an insurance inspector, just back from a trip through the Lone Star State, "I feel an icy creeping about the roots of my hair. I found it on a hillside in a country town, but I am by no means certain it is still there. In fact, I wouldn't even bet on the hill being in the same place. The boiler was extremely old. It looked as if it might belong to the glacial period, and was totally devoid of indicators, gauges, or anything else to show the head of steam or quantity of water. The proprietor was a placid German, who told me he filled it every morning with a bucket. I asked him how he estimated the pressure, and he replied that he occasionally let off a little steam, and if it 'looked blue' he ceased to poke the fire. After I heard that explanation I hastily retired to the other side of the town, and didn't breathe easy until the train pulled out. The old boiler has been rocking along for the last ten years, and its presence on earth each consecutive day of that period is a full-blown, 18 karat miracle. It is a capital illustration of the deep depravity of inanimate things. If it was located in the heart of the city, where it could blow up a hundred or so human beings at one fell swoop, it would explode in less than five minutes by the watch. Out there, where the best it can do would be to mix up the Dutchman and the hill, it evidently doesn't consider the results worth the exertion. I think it must be waiting for a Sunday School picnic."—*New Orleans Picayune.*

In Favor of the Metric System.

While the propaganda for the adoption of the metric system of weights and measures have made much headway in this country within the decade, it would seem from recent consular reports that its progress here is not in keeping with the exigencies of foreign trade. England, we understand, says Bradstreets, has lost the Dutch market for iron and steel of certain makes to Germany, primarily because of the convenience in ordering goods of the Germans by the metric system—a standard of weights and measures that is fostered by the Germans and but little used by the British. And if England has been injured by its non-use, perhaps we have been, too. At any rate, the information contained in a report from the British consul at Amsterdam to the effect that the German manufacturers of iron and steel have adopted a uniform scale of dimensions based on the metric system, for articles of universal consumption at home and abroad, should not go unheeded by American manufacturers. Some of these articles, angle iron of all descriptions, for instance, and flanged boiler ends, are made of certain sizes, distinguished by simple marks and numbers. Thus German manufacturers are enabled not only to promise prompt shipments, but to make them.—*Ex.*

Josh Billings in "President's English."

A mule is a bad pun on a horse.

Wheat is a serial. I am glad of it.

A fib is a lie painted in water colors.

Ignorance is the wet nurse of prejudice.

Did you ever hear a very rich man sing?

We have made justice a luxury of civilization.

Wit without sense is a razor without a handle.

Old age increases us in wisdom—and in rheumatism.

Time is money, and many people pay their debts with it.

It is easier to be a harmless dove than a decent serpent.

Benevolence is the cream on the milk of human kindness.

Face all things; even adversity is polite to a man's face.

Beware of the man with half-shut eyes. He's not dreaming.

People of good sense are those whose opinions agree with ours.

It is little trouble to a graven image to be patient, even in fly time.

Half the discomfort of life is the result of getting tired ourselves.

Humor must fall out of a man's mouth like music out of a bobolink.

Necessity is the mother of invention, but Patent Right is the Father.

Pleasure is like treacle. Too much of it spoils the taste for everything.

Most men are like eggs, too full of themselves to hold anything else.

Passion always lowers a great man, but sometimes elevates a little one.

There are people who expect to escape hell because of the crowd going there.

Manner is a great deal more attractive than matter—especially in a monkey.

Adversity to a man is like training to a pugilist. It reduces him to his fighting weight.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Bristol, Tenn.—The Barker Hardware Co. has been incorporated. The capital stock is placed at $50,000. The following are the incorporators: J. M. Barker, R. M. Crumley, M. B. Bushong, W. E. Lady, and J. P. Ferris. The firm has just moved into a large building erected for its use.

Cambridge, N. Y.—Gilbert Maxwell.

East Jordan, Mich.—The Bride Hardware Co. has been incorporated. Capital stock, $5000.

Faribault, Minn.—The Charles H. Wall Hardware Co. has been incorporated. Capital stock, $50,000. Incorporators: Alonzo J. Galbraith, St. Paul; Charles H. Wall, Faribault; John P. Galbraith, Grand Forks.

Great Bend, N. Y.—B. S. Galloway.

Holland Patent, N. Y.—Thos. J. Wolf.

La Grange, Ind.—O. L. Moon.

Lake Charles, La.—The G. T. Rock Hardware Co., Ltd. has been incorporated with a capital stock of $20,600. The new company succeeds the establishment of G. T. Rock. The officers of the new company are G. T. Rock, president and treasurer; and G. H. Rock, secretary. N. D. Pope and G. T. Rock are the directors. The company will erect a two-story brick building on Bryan Street, 25x160 feet, connecting with the rear of the Rock store.

Meyers Falls, Wash.—W. L. Porter.

Middlesboro, Ky.—J. Boyd Rose.

Portsmouth, Ohio.—The J. C. Hibbs Hardware Co. has been incorporated to do a Hardware business. Capital, $60,000. Incorporators: J. C. Hibbs, L. D. York, H. D. Hibbs, A. S. Duduit, E. R. Peebles.

Quincy, Ill.—Sherwood & Martin.

Waxahachie, Tex.—The Malone Hardware Co. has been incorporated. Capital tock, $10,000. Incorporators: T. J. Tingle, J. H. Koen, S. Crabb, all of Waxahachie.

Williamstown, Mass.—Kellogg & Danaher.

York City, Pa.—A. H. Allison.

Changes and Improvements.

Beverly, Mass.—Woodward & Ober's new Hardware store in the Rogers Block has has opened for business.

Buffalo, N.Y.—The Elderfield-Hartshorn Hardware Co. have purchased the Hardware business of Walker & Paterson, Falls Street, and will take possession on May 1st.

Clyde, N.Y.—The Hardware firm of Bliss & Swift has been dissolved; L. P. Swift retiring from business. The latter has sold his interest to E. H. Millard, of this village, and the business will be continued hereafter under the firm name of Bliss & Millard.

Dunkirk, N. Y.—Philip B. Cary, for years one of the leading Hardware merchants of this city, has decided to remove to Buffalo.

Farmington, Me.—Elford Durgan has sold his half-interest in the Hardware store, upper Main Street, to his partney, Harley Greenwood.

Gloucester, Mass.—The plate glass front in the Hardware store of L. E. Smith makes an excellent improvement to the establishment. The windows extend the entire length of the store.

New Berlin, N. Y.—White & Pope, who for the past year have conducted a Hardware store in the rink building, have rented one of the stores in the new Eagle Hotel Block, to which they will remove about May 1st.

Newmarket, N. H.—The firm of Young & Young, Hardware dealers, has been dissolved, Charles H. Young retiring.

Pontiac, Ill.—Austin Wooley, who has been in business in Chicago the past ten years, has bought a half-interest in Edgar Cook's Hardware store, and has moved here.

Portland, Ore.—Honeyman, DeHart & Co., the large wholesale Hardware firm of this city, are making arrangements to put in a warehouse at Lewiston, Ida., for the distribution of their heavy goods throughout the Lewiston country and the Palouse section. They expect to follow this step later by establishing a branch store in Lewiston.

Port Huron, Mich.—The Hardware store of Charles F. Taylor will be considerably enlarged and made three stories high.

Rock Island, Ill.—F. O. Dahlberg, the Hardwareman, expects to move into his new building very soon. The ground floor is nearly completed and it will make a very fine building for a Hardware stock.

Scranton, Pa.—I. T. Quick, formerly of T. F. Leonard's Hardware store, has formed a partnership with T. R. Bowen who has conducted a Hardware store for a number of years at No. 509 Lackawanna Avenue. The new firm will be known as Bowen & Quick, and will continue the business at the old stand.

Sherman, Mich.—Thomas Wilson is preparing to close out his Hardware business here. E. Gilbert is taking the canceled orders for farm implements of Mr. Wilson, and will add this line to his general store.

Sing Sing, N. Y.—Miller & Williams, Hardware merchants, have dissolved partnership, Mr. Miller retiring, and Mr. Williams carrying on the business.

Warsaw, N. Y.—Webster & Case, Hardware merchants, are moving into the building recently purchased by them of L. E. Walker.

Wayne, Mich.—J. C. Cozadd, whose Hardware store was destroyed in the late fire, has bought out the Hardware stock and business of the firm of Murphy & Woolger, in the Stringer Block.

Business Embarrassments.

Bridgeport, Conn.—Judge Shumway has appointed a temporary receiver for the Hull & Hoyt Co., a large Hardware concern of Danbury. Ex-Senator Henry Bernd has been named as receiver and bonds fixed at $50,000.

Cleveland, Ohio.—A petition for involuntary bankruptcy has been filed against the firm of A. M. Starkweather & Son, No. 50 Frankfort Street, dealers in house Hardware, glass globes, and burners. The claims of the petitioners amount to $2,206.05.

New Orleans, La.—Philip Peter has been appointed receiver of the John E. Wiemann Hardware Co.

North Bend, Neb.—The large Hardware store of W. H. Seevers has been closed, the business being now in the hands of his creditors. It is supposed that all claims will be paid in full.

St. Louis, Mo.—The affairs of the A. Hoffman Hardware & Paint Co., of No. 250 North Fourteenth Street, have been brought into court with a request for the appointment of a receiver to take charge of the business of the corporation.

Syracuse, N. Y.—G. Fred. Schafer, Hardware dealer at Nos. 504 and 508 North Salina Street, has filed a petition in bankruptcy. Mr. Schafer made a statement of his financial standing last December, in which his assets were given as $40,000; liabilities, $10,000.

Topeka, Kans.—A suit has been filed in the United States District Court to force Meadow & Son, a Hardware firm of Gaylord, Kans., into bankruptcy. The suit has been brought by the wholesale firms which have been furnishing the Gaylord firm with goods. The firm is composed of W. S. Meadow and his son, P. Meadow.

Burglaries in Hardware Stores.

Deering, Me.—L. D. Huntress; cutlery.

Louisville, Ky.—Geo. J. Buck; $100.

Pierce, Nebr.—M. Inhelder; cutlery.

Syracuse, N.Y.—Louis Schillinger; small loss.

Syracuse, N. Y.—Burhans & Black Co.; $80.

Victoria, B. C.—W. Bownass; $60.

Fires in Hardware Stores.

Augusta, Kans.—The Hardware store of E. H. Frenzel has been destroyed by fire. Loss, $5000; insurance, $4000.

Bay City, Mich.—W. C. Grisdale & Co.'s Hardware store has been destroyed by fire. Loss, $7000.

Bloomfield, Ind.—The Hardware store of French & Shields has been destroyed by fire. Loss, $6000; insurance, $4000.

Coleman, Mich.—The Hardware store of J. M. Doherty has been destroyed by fire. Loss, $5000; insurance, $2000.

Georgetown, Colo.—S. Nash's Hardware store has been destroyed by fire.

Lead, S. D.—Henry Jacobs' Hardware store has been destroyed by fire.

Lyndonville, N.Y.—W. F. Horton's Hardware store has been destroyed by fire.

Red Lodge, Mont.—The Hardware store of Fulton & Dalton has been destroyed by fire.

Southwest City, Mo.—J. D. Georgian's Hardware store has been destroyed by fire.

Sweet Home, Tex.—H C. Middlebrookes' Hardware store has been destroyed by fire.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—The Albany Recording Scale Co. has been incorporated with the Secretary of State, to lease, operate, purchase and manufacture coin-controlled machines and similar mechanical devices. The capital is $50 000, divided into $30,000 cumulative preferred, and $20,000 common stock. The directors are: Peter E. Martin, Grant Newcomb, Charles F. Rushmore, Eugene P. Miller, Luther C. Warner, William H. Erwin and J. S. Frost, all of this city. The company begins business with $25 000.

Bangor, Me.—The certificate of incorporation of the Farming Implement Mfg. Co., of Hampden, has just been filed at the registry of deeds. The object of the company is the manufacture of farming tools. The capital stock is $5000. The officers of the company are W. H. Nason, president; A. H. Smith, treasurer, and George N. Holland, clerk. The directors are: W. H. Nason, A. H. Smith, George N. Holland, H. W. Mayo, George Sweetser, S. D. Greeley and E. B. Thomas. All of the officers and directors are residents of Hampden.

Birmingham, Ala.—The steel rod, wire and nail mill of the Alabama Steel Wire Co., the first plant of the kind in the South, has commenced operations. This plant, erected at the cost of $2,000,000, has a capacity of 600 tons a day. It will get the steel billets from the new steel mill of the Tennessee Coal, Iron & Railway Co., which is adjacent. It will make steel wire, rods and nails. It has special machinery for the manufacture of shapes and sizes suited to the export trade.

Braddock, Pa.—The Braddock Tool Co., composed of Joseph Striebick, S. E. and William Seug, Charles Wolfe, Councilman John A. Loew, John W. Mohr and Oswald Muldenberg, applied for a charter and expect to receive it shortly. The capital stock, $25,000, has all been paid up. The factory will be 30 x 80 feet, double story, of heavy frame and sheet iron, located on West Holland Avenue, near Second Street.

Cedar Rapids, Iowa.—The Lang Cutlery Co., recently organized in this city, expects to be able to place their goods on the market in a short time. They will sell only to the wholesale trade.

Chicago, Ill.—The L. & L. Pneumatic Tool Co. has been incorporated. Capital stock, $10,000. Incorporators: George Lieninger, Herman Leineweber and Oscar A. Lewp.

Cleveland, Ohio.—The Mann & Philpot Co. has been incorporated. Manufacturing rubber and rubber goods. Capital, $5000. Incorporators: T. L. Philpot, A. W. Bohmes, W. B. Philpot, A. L. Hoffman.

Elkhart, Ind.—This city has secured the location of the American Brush Co., which will occupy an unused factory building. Twenty thousand dollars will be invested. The company will use cactus fiber for its brushes, and will manufacture all kinds, from a broom to a street sweeper.

Indianapolis, Ind.—The Duckwall-Harman Rubber Co. has been incorporated with a capital stock of $8500. The directors are Herbert R. Duckwall, Edward Harman and Chauncey R. Watson.

Martin's Ferry, Ohio.—The Spence-Baggs Stove Co. has been incorporated. Manufacturing stoves. Capital, $60,000. Incorporators: L. Spence, W. P. Baggs, W. H. Seabright, Elizabeth H. Flote, Louisa J. Scheele.

Shelbyville, Ind.—The Eagle Range Co. has been incorporated with a capital stock of $5000. The directors are: C. M. Trautmann, W. O. Noffsinger and John A. Raynes.

Spokane, Wash.—The Spokane Galvanized Wire Pipe Co. have filed articles of incorporation. The company has a capital stock of $15.000, and the following trustees: J. C. Ralston, Leo H. Long, Charles H. Eltinge, W. L. May, H. Orchard.

Trenton, N. J.—The International Acheson Graphite Co. has been incorporated with an authorized capital of $3,000,000. The company is empowered to manufacture graphite and carbon, and all graphite articles, including paint and stove polish. The incorporators are: Edward G. Acheson, Peter McNiven Bennie, and Kenneth K. McLaren, Jersey City.

Toronto, Ont.—The Dominion Fence Co. has been incorporated with a capital stock of $750,000.

Changes and Improvements.

Exeter, N. H.—The radiator business of the Exeter Machine Co. has been purchased by the William H. Page Boiler Co, of Norwich, Conn. The radiator plant will remain in Exeter, but may be removed to Norwich later if satisfactory arrangements can be made.

Hammond, Ind.—The Hammond plant of the Lakeside Nail Co., which has been idle for almost four years, will resume operations. The plant has been leased by J. C. Briggs and other Ohio capitalists, who will convert it into a bar mill, which will employ 150 men. Work of remodeling will be begun at once.

Indianapolis, Ind.—The Standard Tack Co., located near Providence, R. I., will remove its plant to this city.

Plainfield, N. J.—Owing to the large amount of business at the Pond Tool Works, the largest in the past two years of any time in the history of the plant, it has impressed upon the company the necessity of enlarging the building, and plans are out for an extension which will double the foundry facilities at the west end, and materially increase the facilities in the machine shop in the east end. The company now intend adding 250 feet to the foundry extending toward the west, which, with the present structure, and the 750 feet of main building, will make nearly a quarter of a mile, besides the addition on the machine shop on the east, which may amount to a couple of hundred feet more.

Recent Embarrassments.

New Haven, Conn.—Frederick C. Lum, of No. 39 Dwight Street, has been appointed receiver of the Lavigne Automatic Mfg. Co., of No. 161 River Street, by Judge Wheeler, of the Superior Court.

Quincy, Ill.—The Bentley-Dudley Implement Co. have made an assignment to William F. Newell for the benefit of their creditors. The assets are reported at $9500, and the liabilities at $8500.

Recent Fires.

Cleveland, Ohio.—The plant of the Hoffman Hinge Co., No. 1054 Hamilton Street, has been destroyed by fire. The loss is in the neighborhood of $10,000, nearly covered by insurance.

Kokomo, Ind.—For the third time within a few months the japanning department of the Kokomo Wood-Enameling Works has been destroyed. A fire, a few mornings since, has totally wrecked this portion, and the plant was saved from destruction with great difficulty. The loss will exceed $5000, covered by insurance. The japanning building had just been rebuilt from the ruins of a former fire.

Newark, N. J.—The factory of the Positive Lock Washer Co., No. 291 N. J. R. R. Avenue, has been damaged by fire. Loss, $1000.

Philadelphia, Pa.—Fire has caused the total destruction of the insulated wire manufactory of Alfred F. Moore, on the northwest corner of Third and Race Streets. The contents of adjoining properties were badly damaged by water, and the total loss is estimated at $300 000

Philadelphia, Pa.—The plant of V. Clad & Sons, No. 121 South Eleventh Street, manufacturers of hotel ranges and kitchen supplies, has been damaged by fire, following an explosion in the building adjoining.

Saratoga, N. Y.—The scythe department of the American Axe & Tool Co.'s plant, near Ballston Spa, has been destroyed by fire, which started from the explosion of a lamp in an oil pit. The loss is estimated at $20,000.

Miscellaneous.

Milwaukee, Wis.—At the annual meeting of the Fuller-Warren Co. the following officers and directors were elected: President, H. A. Viets; vice-president, George L. Graves; secretary, C. W. Jones; treasurer, J. L. Potter. Directors: George L. Graves, H. A. Viets, John Johnston, J. E. Hansen, William Plankinton, J. A. Roundy and H. S. Haseltine.

Pottstown, Pa.—The March-Brownback Stove Co. met recently and elected seven directors for the ensuing year, as follows: Franklin March, T. Jefferson March, James Rogers, Dr. J E. Porter, James Brownback, A. K. Shaner and M. W. Baily

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Allston, Mass.—Geo. H. Cushing, Brainree Street.

Baltimore, Md.—The Schaum Automobile & Motor Mfg. Co. has been incorporated by William H. Wickham, Walter S. Leutbecker and John T. Carroll. Capital stock, $50,000, divided into 5000 shares of $10 each.

Battle Creek, Mich.—The Bean-Chamberlin Mfg. Co.'s branch reopened, under management of G. Ritchie & Sons, at No. 182 South Division Street.

Bellows Falls, Vt.—Lawrence Cannon, Atkinson and School Streets, reopening.

Bondsville, Mass.—John Hayes.

Brattleboro, Vt.—C. W. Hart.

Brighton, N.Y.—The Eckhard Motor Co., has been incorporated. Capital, $30,000. Directors; John Eckhard and C. E. Butterfield, of Brighton.

Bristol, Vt.—C. I. Page, O'Neill Block, repairing.

Camden, N. J.—The Ducasble Tire Co. has been incorporated to manufacture wheels andtires, with $100,000 capital stock, of which $1000 is paid in. Frank D. Millan, H. C. Magee and W. J. Jackson are the incorporators.

Chesham, N. H.—Chas. H. Raymond, repairing.

Columbus, O.—Work has begun on the factory of the Columbus Tubing Co. In addition to tubing and bicycle pedals the company will also make a ball-bearing wheel with pneumatic tires for runabouts and automobiles. The company is composed of G. C. Urlin, L. Fink and H. D. Freeman.

Coshocton, Ohio.—McCabe & Knoff.

Danvers, Mass.—L. H. Roberts, Elm Street.

Danvers, Mass.—F. A. Butler.

Decatur, Ill.—Drum & Gordo, North Main Street.

Decatur, Ill.—H. M. White.

Decatur, Ind.—John Fetzer.

Denver, Colo.—R. A. Creek, No. 621 Sixteenth Street.

East Hutton, Ill.—Goble & French.

Edgeworth, Mass. — Jeremiah Murphy, Adams Street, repairing.

Essex, Conn.—Fred. Wright, repairing, will open shortly.

Ft. Madison, Ia.—C. Wiley.

Green Bay, Wis.—John W. Robertson.

Glens Falls, N. Y.—Charles Bent and Daniel Wood have formed a partnership and will open a repair shop on Elm Street.

Kettlerville, Ohio.—H. T. Ruese.

Lenox, Mass.—Ernest Collins.

Lincoln, Neb.—The Automatic Cycle & Pump Co., of Nebraska, has been incorporated with $50,000 capital stock. Incorporators: C. M. Jaques, Landy C. Clark, Robert C. Druesedom and Cyrus E. Sanderson.

Logansport, Ind.—C. M. Kramer.

Mechanicsville, Ia.—Miller Bros.

Medford, Mass.—P. H. Brown and B. W. Hodgeman, No. 484 Main Street, Tufts Square.

Medway, Mass.—Edward Freeman.

Mt. Pleasant, Mich.—Tom Battles.

Newark, N. J.—The Automobile Co. of America has been incorporated. Capital stock, $250,000. Incorporators: G. A. Lamb, E. B. Hawkins and A. G. Brown.

New Haven, Conn.—Alfred Johnson, Court Street, reopening.

Peterboro, N. H.—J. E. Livesey.

Portsmouth, Ohio.—Lou Bierly.

Rochester, N. Y.—The Wagner Mfg. Co. has been incorporated to manufacture general machinery and bicycles. Capital, $75,000. J. George Wagner, Jr., and W. G. Humphrey are incorporators.

Rockford, Ill.—The Hurd Cycle Co. has been incorporated with $2500 capital. Incorporators: Joseph W. Hurd, James Huston and R. K. Welsh.

Rockland, Mass.—Frank Davis, School Street, reopening.

Salem, Mass.—F. A. Butler.

South Bend, Ind.—E. G. Roberts and Milton Rost, No. 205 E. Jefferson Street.

Springfield, Mass.—Frank W. Hill, No. 132 Worthington Street, repairing.

St. Louis, Mo.—The Meyers Bicycle & Sporting Goods Co. has been incorporated with $5000 capital. Incorporators: Louise M. Meyers, James C. Meyers, Susannah M. Schoeber and B. A. Brown.

Tariffville, Conn.—W. M. Ketchin, repairing.

Taunton, Mass.—J. Caverly, No. 101 Main Street.

Thomaston, Conn.—J. Kaufman, repairing.

Toledo, Ohio. — C. A. Ackley, Adams Street.

Warren, Mass.—A. & W. Moreland.

Warren, Pa.—E. E. Hertzel.

Wappingers Falls, N.Y.—Schofield Bros., Clapp Avenne.

Watertown, Mass.—Jos. Quigley.

West Pittston, Pa.—Schusler & Bechtoldt.

Wheeling, W. Va.—Meyers & Co.

Changes and Improvements.

Alexandria, Minn.—H.A LeRoy succeeds LeRoy & Mason.

Altoona, Pa.—U.S. Aaron will cease handling bicycles.

Beloit, Kans. — T. H. Kiniry succeeds Kiniry & Son.

Beverly, Mass.—F. A. E. Hamilton has made changes and installed new machinery.

Bridgeport, Conn.—John Polhemus succeeds Smith, Murray &Co.

Buffalo, Kan.—Johnson & White succeed Johnson Bros.

Buffalo, Wyo.—Munkers & Mather will stop handling bicycles.

Butler, Ind.—The Butler Cycle & Organ Co. have retired.

Celina, Ohio.—W. H. Conner succeeded by Conner & Schmitt.

Central City, Iowa.—Altmeyer & Cunningham succeed Stark & Altmyer.

Coldwater, Mich.—J. H. Sutherland & Co. succeed Harry L. Nichols.

Delavan, Wis.—The Crary Stove & Hardware Co. have retired.

Dover, N. H.—Frank F. Wentworth has removed to First Street.

Dowagiac, Mich.—W. V. Vrooman & Son succeed Wm. V. Vrooman.

East Pepperell, Mass.—F. W. Ames has succeeded John W. Durant.

Erie, Pa.—Chambers & Suerken will remove to No. 1223 State Street.

Farnhamville, Iowa.—Josiah Dudley & Co. have succeeded Dudley & Toland.

Fall Creek, Wis.—Ziemann & Garbe have retired.

Franklin Falls, N. H.—C. P. Webster will retire from the bicycle business.

Gloucester, Mass.—Chas. J. Gray, Main Street, will make extensive changes.

Gloversville, N. Y.—Thrall Bros. have dissolved partnership; Jos. G. Thrall will continue.

Greentown, Ind.—Holliday & Ware succeed Holliday & Kern.

Hudson, N. Y.—Ernest E. Shaw succeeds C. E. Shaw.

Jamestown, N.Y.—Chas. H. Pew succeeds Salisbury & Pew.

Johnstown, Ohio.—W.T. Hughes succeeds Hill & Hughes.

Kalispell, Mont.—Philips & Criswell dissolved.

Kane, Pa.—Thos. Crowell succeeds Grant & Crowell.

Lima, Ohio. — H. Hauenstein succeeds Hauenstein & Armstrong.

Livermore, Iowa.—J. W. Leighton succeeds Leighton & Coleman.

Manchester, N. H.—J. A. Ricard will sell out and remove from State.

Marengo, Ill.—Clarence Barnes succeeds T. H. Gill.

Marysville, Cal.—Peter Engel has retired from business.

Massillon, Ohio.—J. R. Smith has removed to No. 29 W. Main Street.

Metamora, Mich.—Lundy & Lewis have retired.

Mexico, Mo.—Andrew Winscott will cease handling bicycles.

Newburg, Ore.—C. F. Johnson has sold out.

Recent Embarrassments.

New York, N. Y.—A petition in involuntary bankruptcy has been filed against Seymour B. Goodkind, dealer in sporting goods at No. 65 Cortlandt Street.

Recent Fires.

Camden, N. Y.—The plant of the Simmons Saddle Co. has been destroyed by fire.

Centre Ossipee, Me.—The oar and paddle factory of T. J. Shaw & Co. has been burned at a loss of $5000; well covered by insurance.

Kingston, Ont.—E. W. Robinson, loss $600, with $500 insurance.

Quincy, Mass.—The bicycle store of John H. Gillis has been destroyed by fire. Loss, $3000; insurance, $2000.

The Blount Door Check

is described in a monthly bulletin of good things issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

REVIEW OF THE MARKETS.

Hardware: The manufacturers are enjoying a waiting demand, as their orders for the current season have all been booked, and the new enquiries are having reference to Fall requisitions which will soon be in order. The jobbers, however, are now enjoying the first degree of fulness for the Spring trade, and the pleasant weather we have had on every hand is beginning to make the influence of good roads felt in the rural districts, and the retailers begin to experience an influx of consumers' wants. Activity in retail trade circles has not yet been of great importance, but travelers are sending home well assorted orders for general wants, and the indications on every hand point to a good season with fair average prospects if unnecessary cupidity doesn't guide the discount sheets of the liberal manufacturer.

Wire Nails: The Wire Nail market has experienced no change since our previous issue The demand is good, and will increase largely as the season advances. Manufacturers' quotations remain as follows, f. o. b. Pittsburgh; terms, thirty days, 1 per cent off in ten days:

To jobbers in carload lots	$3 20	Base.
To " in less than carload lots	3.22½	"
To retailers in carload lots	3 35	"
To " in less than carload lots	3.45	"

New York City.—The demand is increasing in importance, and prospects for future business are unusually good. Manufacturers' quotations remain as quoted in our previous issue, with an advance of five cents on small lots from store:

To retailers, carload lots on dock	$3.53	Base.
" less than carloads on dock	$3 66	"
Small lots from store	$3.65 to 3.75	"

Cut Nails: The market is firm on Cut Nails; the demand is fairly good with prices unchanged. Quotations are as follows: f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

1000 kegs and over	$2.50	Base.
In carload lots	$2.55	"
To jobbers in less than carload lots	2.60	"
To retailers " " "	2.70	"

New York: With an increasing demand, prices remain as quoted in our previous issue.

To jobbers in carloads on dock	$2.73	Base.
" in less than carloads on dock	2.78	"
To retailers " " "	2.90	"
Small lots from store	$2.90 to 2.95	"

Barb Wire: The demand for Barb Wire continues moderately improving with firm market. Quotations remain the same as quoted in our recent issue: f. o. b. Pittsburgh; terms, 30 days, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted	$ 3.65
" " Galvanized	3.80
" in less than carload lots, Painted	3.07½
" " " " Galvanized	3.82½
To retailers in carload lots, Painted	3 80
" " Galvanized	3 95
" in less than carload lots, Painted	3.90
" " " " " Galvanized	4.05

Smooth Wire: The demand for Smooth Wire continues in good and improving condition. There has been no change in quotations since our recent issue the following representing the market: f. o. b. Pittsburgh; terms, thirty days.or 1 per cent. off in ten days:

To jobbers in carload lots	$3 05	Base.
To " in less than carload lots	3 07½	"
To retailers in carload lots	3.20	"
To " in less than carload lots	3 30	"

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, $1.10.

Toilet Clippers: E. S. Hotchkiss, J. H. Graham & Co., selling agents, has advanced prices on a number of his Toilet Clippers, particulars of which will come with his revised discount sheet.

Flint and Emery Paper, Emery Cloth, &c.: John H. Graham & Co., No. 113 Chambers Street, New York, have been appointed sole selling agents for the sale of "Sterling" Flint and Emery Paper, and Emery Cloth. This line of goods is fully guaranteed, and the agents state they are prepared to quote low prices and make prompt shipment.

Cordage: The cordage market is but a trifle lower in quotations on Manila, Sisal remaining without change. For carload lots they are as follows, with an advance of a quarter of a cent for less quantities, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger	per pound,	15¼	cents.
" ¾ inch	"	15¼	"
" ½ and 5-16 inch	"	16¼	"
Sisal, 7-16 inch and larger	"	10	"
" ¾ inch	"	10½	"
" ½ and 5-16 inch	"	11	"
" Lath Yarn	"	9½	"

Manila Tarred Rope, 15-thread, 15¼ cents. Manila Hay Rope, medium, 15¼ cents. "A" grade of Jute Rope 7½; "C" grade 7 cents. Jute Wool Twine, 4 ply only, per pound, 7 cents; all other sizes, 7½ cents

Binder Twine: On Binder Twine the market is daily increasing in importance, but prices are held steady at quotations that have prevailed for some time. Market is firm at the following: f. o. b. New York, Philadelphia or Boston, with a reduction of ⅛ cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of ¼ cent per pound for carload lots:

White Sisal, 500 feet to pound	11¼ cents.
Standard, 500 feet to pound	11¼ "
Manila, 600 feet to pound	14¼ "
Pure Manila, 650 feet to pound	15¼ "

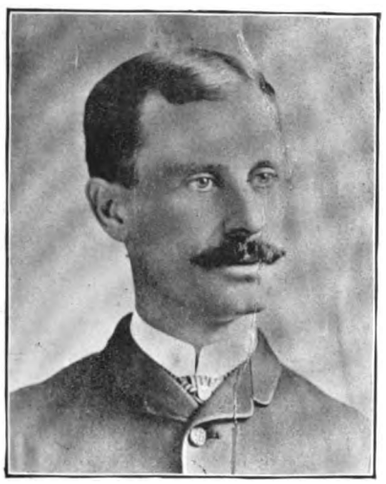
Copper Sash Chain: Chantrell Tool Co., for whom John H. Graham & Co., No. 113 Chambers Street, New York, are selling agents, have added Copper Sash Chain to their line of manufactures and areprepared to furnish promptly. Prices will be quoted upon application.

Railroad Picks, Mattocks and Grub Hoes: These goods were advanced on April 1st, 10 per cent. over previous quotations.

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels ..... 64 cents per gallon.
In lots of 5 barrels or more ..... 63 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 71 cents per gallon.

With our trade letters in this Anniversary number of our paper, we take pleasure in presenting the portrait of the correspondent through whose considerate kindness we are enabled to give our readers the semi-monthly summary of commercial conditions, to be found in each trade center from which our interesting letters emanate. Connected as closely as these gentlemen are with leading Hardware establishments throughout the country, *Hardware* feels under lasting obligations that they are able to spare any time from arduous and responsible duties to write such interesting letters for the delectation and guidance of their confreres in this all-important industry.



THE BOSTON TRADE.

Business for the first quarter of the year has not been up to the expectation and hope of the majority, but when the conditions that have existed during the past year are considered it is not surprising that sales have not been larger, and the outlook for the balance of the year is somewhat problematical.

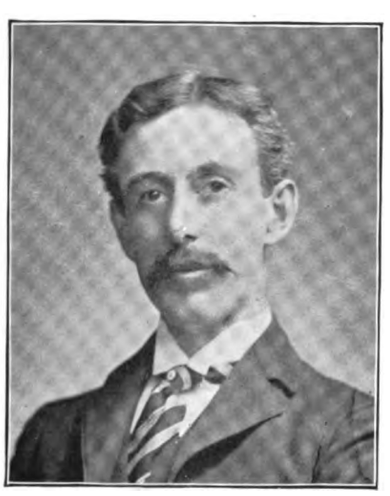
Digitized by Google

In some cases we find the retail trade with a full stock bought before advances were made, but we believe the light demand is due to an impression that values are somewhat above the limit, and for this reason orders have been given only on the most conservative lines.

Those who took a pessimistic view of the situation early in the year have seen their mistake, and at the present

A. M. WILEY.

writing there has been but little change in values, and prices are fully up to those made early in the season.



On some lines competition has forced a reduction in quotations, but this is something always to be expected during a dull season.

The outlook for building material varies. In some sections there seems to be an absence of any demand for this line, while in other localities we notice an activity which exceeds that for many years past.

The bright weather during the past few days has stimulated the demand for seasonable lines, and such goods as steel goods, lawn mowers, rakes and scythes are moving freely. Frye, Phipps & Co.

THE PHILADELPHIA TRADE.

Our crying demand to-day is for Spring weather. While the Winter has not been severe, there has been an unusual amount of late cold weather which has retarded out-door

JAMES H. RITTER.

work greatly, and had some effect upon trade. Just now, a large portion of our own State is practically frozen and farmers have not been able to start Spring operations to any extent.

Under these circumstances, a large trade was not to be expected. While a fair amount of goods has been moving, still, a large increase of trade is confidently expected if April should prove warm and Spring like. During the last few days there has been some sunshine, and Spring goods are more in evidence, as will be seen by a glance at any shipping floor.

Prices show but little change; manufacturers claim with the present high prices of material it is impossible to shade present figures; while the healing of the Carnegie-Frick controversy, and the fact that Bessemer pig iron commands higher prices than at any time in the last few years, would seem to indicate that no sudden or great drop in prices is likely to happen.

The expected advance in wire and wire nails on April 1st did not materialize. Wire nails, however, are in fair demand, and the comparatively high prices prevailing to-day seem to have but very limited effect in restraining the demand for wire nails—in fact, it is doubtful whether the demand is lessened at all, On barbed wire the situation is somewhat different, but the uses of plain wire have become so manifold recently that necessity compels the maintenance of the usual large consumption.

Biddle Hardware Co.

THE BALTIMORE TRADE.

Baltimore has enjoyed a delightful rush of trade since last year, barring the past two weeks, when a sudden lull stole upon us, giving time for reflection, and renewing energy for further action. Whilst manufacturers still report

DUDLEY R. WEBB.

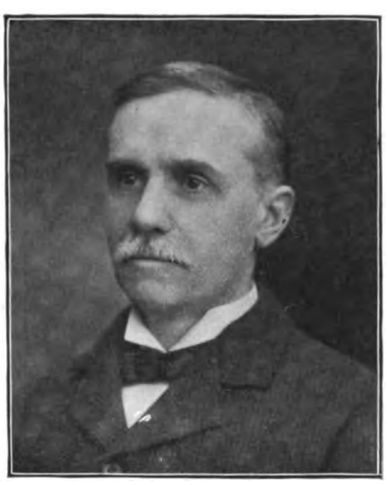
large orders on hand unexecuted, we find that prompt shipments are not impossible, and new business is eagerly sought and accepted for immediate delivery. Prices of most articles in the line are firm, for a little while at least, and a few are conspicuously "on the fence," leaning gracefully toward a lower level. Manufacturer appears happy, jobber serious, retailer uneasy, and who can guess the cause? We think we hear voices emanating from a lofty atmosphere flavored with consolation which warble "Don't tell your troubles to the trusts." Political cannons will soon be fired, new horses entered in the race, and the complexion of things may change. H. W. Webb & Sons.

THE NASHVILLE TRADE

With the advent of sunny Spring weather we note a marked increase in the volume of business. Some lines of goods that have been on a standstill for a long time are now moving quite rapidly. Retail stocks are being broken, and the retail dealers are replenishing liberally, realizing that the long-expected "slump" in prices is not coming right away, and as their customers are demanding more goods than they have on their shelves, the natural consequence is that the fill-in orders are almost as heavy and fully as numerous as were the first orders. The gradual advance of the price of quite a good many lines has had the happy effect of strengthening the confidence of those who have for so long prophesied a decline and held back buying with that idea, and from now on we apprehend but little trouble from this weak-kneed class. A great deal of

Digitized by Google

building is being done, and the demand for locks, butts and builders' Hardware generally is unprecedented. The demand for plows and farm implements is very heavy, and harvesting goods are already moving out on the promise of a most bountiful wheat crop.



Traveling men report good conditions generally and a good feeling among their customers, who are sanguine of a prosperous year's business. If the prices of farm products remain as they are or keep in line with the prices of manufactured goods, nothing short of an epidemic or a drought or a famine can keep us from having one of the best years for the past ten. H. G. Lipscomb & Co.

THE PITTSBURGH TRADE.

There has grown up among jobbers, a rivalry for early season orders which, it seems to us, has gone far beyond reasonable bounds.

One house gets out with its line of guns or horse blankets for the Fall trade in May. The next year another house goes its competitor one month better and shows its samples in April. The next year still another gets out in March, and so it has been pushed back month by month until there seems a probability of season goods being sold eight or nine months ahead of the time they are wanted by the retailer.

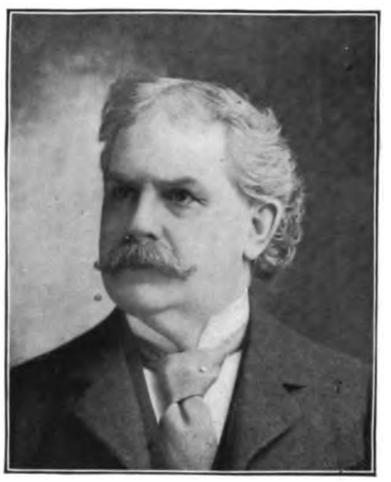
This is not a healthy condition for anybody concerned in the handling of these goods. Contracts must be made be-

GEO. B. LOGAN.

tween manufacturer and jobber much earlier than necessary. Stocks must be carried much longer than necessary by both manufacturer and jobber. Prices may, and very often do, change between the time of making contracts and delivery of the goods, thus giving rise to disputes. So long as there is a rising market these disputes are not heard of, but when there is a decline, the retailer always expects his goods at the lowest ruling prices during the season, no matter what his contract price may have been.

Just as many goods would be sold one or two months ahead of the time they are wanted, as six or eight.

An ideal state of affairs would be for the jobber to sell Fall season goods in July and August—Spring goods in January and February.



As matters now are, these anticipatory orders are sought for in the thick of the season's work, interfering to a large extent with the ordinary Spring and Fall business, whereas, if they were arranged to come in the comparatively dull months, it would equalize the work through the year.

Would it not be possible for the jobbers to come to some agreement among themselves as to the date at which they will begin to solicit orders for the seasonable items? If this were done everyone would be on an even basis and much annoyance, time and money would be saved,

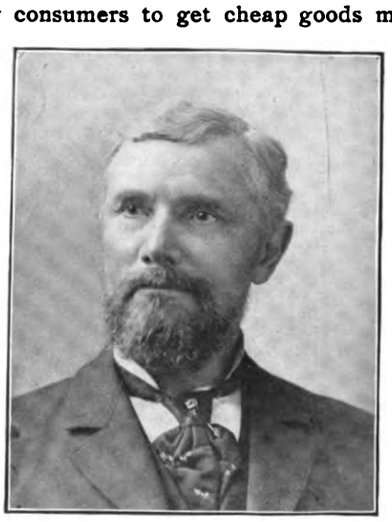
Logan-Gregg Hardware Co.

THE SAGINAW TRADE.

We have had a very backward Spring, nearly a month later than usual. There has been a great deal of hard wood gotten out this Winter more than usual. The river is open and we are having high water, but if we do not have any very severe rain storms will have no trouble.

EDWARD W. MORLEY.

The boat owners are busy painting and getting ready for the shipping. The mills also are preparing for their Spring operations. Business is as good as it was a year ago. The coal mines have been busy all Winter, and are still active and getting good prices.



When Spring fairly opens and the farmers commence to till the soil we expect trade will be good.

Morley Brothers.

THE CLEVELAND TRADE.

Co-operation between the jobber and retailer is necessary to meet the most perplexing problem that threatens both. Department stores and catalogue houses must be prevented from advertising standard makes of goods at cost to gull the public and build up their business, and co-operation between the jobber and retailer is necessary to prevent manufacturers from selling them.

These fakirs must be confined entirely to the poor class of goods, of which most of their stocks consist. The passion among consumers to get cheap goods may compel

C. B. LOCKWOOD.

jobbers and retailers to keep a lower grade of goods to compete with these stores, but no good merchant cares to sell such goods to customers living in their place. If they could get their money before shipping as catalogue houses do, and send the goods to people whom they have no interest in, they might consent to do such business.

It is a curious characteristic of human nature that some people are always "forninst" the store keeper, and will pay more for the same goods to some one not living in

Digitized by Google

their place. The resident merchant can afford to and will furnish his customer the same quality of goods at the same or less price if he is satisfied that that is the kind of goods his customer wants, but the feeling of opposition to the merchant organizes clubs to send away for goods, injuring the prosperity of their own village, not realizing the value of having a successful merchant among them.

Merchants are usually valuable citizens and the citizens of a place can well afford to desire his prosperity.

When the retailer suffers from these "fake" houses, the jobber does also, and they are alike interested in preventing the success of all "fake" traders. The jobber should keep out of the pasture that belongs to the retailer, and the retailer can afford to let the jobber have his. The most successful retailers are those who buy often, keep up their assortments, and the jobber is an important aid to this method. Buying from manufacturers may contribute to one's vanity, but it is not necessarily profitable financially and in many cases results in loss. Both jobbers and retailers should refuse to handle any brand of goods advertised by catalogue houses or sold in department stores, and if they would act together, every manufacturer supplying such stores can easily be listed. Let manufacturers who want that trade confine themselves to it, as neither jobbers nor retailers can afford to carry their goods in stock. When jobbers refuse to buy of them, they go to the retailer and the retailer cuts his own throat by keeping such goods in stock.

If the jobbers and retailers will work together, they can do much to prevent the increase of this evil.

The Lockwood-Taylor Hardware Co.

THE DAVENPORT TRADE.

The demoralization in the nail and wire market is a thing of the past, and we have heard of no irregularities in prices of these goods since the meeting of the Iowa Hardware Jobbers at Des Moines on March 14th. Had it not been for this State organization there is no telling how low the prices of staple hardware would have dropped throughout the State of Iowa. The sooner jobbers learn that it is to their interest to adopt at all times the established prices and terms fixed by the manufacturers the better it will be for us all.

The aggregate of sales is greater than a year ago for the reason that prices are higher, but the tonnage comparison would hardly show much improvement.

The season is late, but the indications are that the present delightful Spring weather will encourage the commencement of building operations, which will, in turn, stimulate trade in builders' Hardware and mechanics' tools.

Collections are satisfactory.

Sickels, Preston & Nutting Co.

THE MINNEAPOLIS TRADE.

We are having excellent weather and many other indications point to very fair prospects of good Spring business. Some little labor troubles; lock out of plasterers and some disaffection among carpenters, but it is expected these matters will adjust themselves very shortly, and it is not thought that they will spread to other branches. Without labor troubles here we can reasonably expect an exceedingly satisfactory year. Everyone is busy, labor well employed and at the highest wages; banks having calls for all the money they care to loan; people buying quite freely, paying the advanced prices with very little complaint; considerable building going on, with prospect of an exceedingly good year; flour mills grinding more wheat than ever before; mills increasing their capacity, using all the latest known devices, working day and night; lumber prices firm at advances that have been made from time to time during the year. It was thought there might be a scarcity of logs, as the first few weeks during the winter season, on account of the mild weather and no snow, logs could not be hauled, but later this adjusted itself, and, although the amount of logs put in will not be as large as anticipated, there will, undoubtedly, be sufficient for reasonable demands.

We are exceedingly busy, not however entirely in selling goods. Have been fitting up a new store the past three months. Have just moved and are now trying to put away our goods and adapt ourselves to our new location, with many things still in an incomplete state. We hope, however, within the next two weeks or so to be fairly well settled, although it will be a much longer time before we get all sampled up and everything arranged just as we contemplate. We shall, however, have a much better location. Change in conditions, growth of the city and general tendency to move up town and away from the older locations on account of more attractive and modern establishments, made it seem necessary to make the change, although the old store has been a Hardware establishment since it was built, thirty-five years ago. To-day, while having the signs removed and the last of the old fixtures taken out, the writer could not help feeling regret, although this corporation had occupied the premises only during the last twelve years. The building has been sold and will be used for other purposes, thus severing the tie, as far as this location is concerned, to a business that started away back in 1855 by Ex-Governor John S. Pillsbury, who later traded his Hardware store for a flour mill, which was the basis of the great Pillsbury-Washburn Mills.

W. K MORISON.

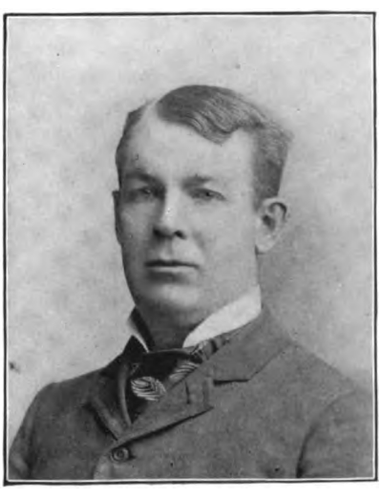
Meanwhile Minneapolis has grown from the small, straggling village of St. Anthony on the east side of the river to a city of nearly 225,000 people, the largest manufacturer of flour and lumber in the world, certainly a very attractive city and a very satisfactory one to live in.

We suffered as others did during the hard times. Prosperity came to us, perhaps, somewhat earlier than it did to the East, and certainly conditions are favorable now for a continuation.

W. K. Morison & Co.

THE DENVER TRADE.

We wish to congratulate you on another anniversary. We wish to congratulate the Hardware trade generally that they have you with us, and, perhaps, right here everybody should be congratulated on the wide-spread prosperity and opportunities of similar description. When we have don this, followed by a sincere wish that like conditions may continue for many years, what more can we say? It tells the whole story. Trade, of course, is good and continually growing better. The retailers who a year ago seemed to be buying heavily, and apparently in anticipation of higher prices, are buying heavier to-day because the people want the goods. The slump in prices anticipated by so many has not materialized, and seems further in the future and not so frightful. We have every hope and prospect of a



Digitized by Google

good business in 1900, and we trust our neighbors far and near have as good a prospect, and that it will materialize.

The George Tritch Hardware Co.

THE OMAHA TRADE.

The trend of business of the past few weeks has been all that could be expected for this season of the year. While undoubtedly in some lines the prices have had a tendency to reduce the tonnage, the volume of business has been surprisingly large. Season goods have moved with a considerable degree of activity, and in the line of wire cloth, screen doors, poultry netting, steel goods, etc., orders have been freely placed. On barbed wire and nails, the trade, while in tonnage somewhat below the average, is,

W. S. WRIGHT.

nevertheless, well distributed, and indicates light stocks in the hands of the retail dealers. The activity in building circles is pronounced and, contrary to predictions, high prices do not appear to have curtailed the disposition to build, but rather increase the demand for building and make it necessary that the want be supplied. Reports from the agricultural districts indicate unusually favorable prospects for the coming season, and in this section no discordant note appears to interrupt the wave of activity and prosperity. Collections, which lagged to a considerable extent in February, have materially improved, and at present little or no demand is being made for extensions.

Rector & Wilhelmy Co.

THE CHICAGO TRADE.

The most important event that has lately occurred and one that has had quite an important bearing on the general trade of Chicago, is the practical close of the machinists' strike this week.

Already we can see evidences of a change for the better, in the demand for goods from the city trade, and the improved Spring weather has materially assisted our country salesmen in securing much larger orders from the retail country trade.

With pork, lard and live hogs higher than they have been since 1895, and corn up to 41 cents; cattle and horses bringing as large a price as any time in ten years, there is no

J. B. NELLEGAR.

reason why the demand for Hardware should not exceed that of last year.

Prices of goods, as a rule, are firm. We have lately received advances of fifty cents per box on axes. Higher prices on several smaller lines and no indication from combination or other manufacturer of lower prices on either nails or wire products.

We learn that the Sheet Steel Combination has been consummated at last, which we fear may advance still further sheet steel, galvanized iron and other similar lines. Collections are good and apparently retail dealers' prospects in both city and country are excellent.

Wells & Nellegar Co.

THE COLUMBUS TRADE.

The writer has been out of the Hardware business for nearly five weeks, rusticating in Southern Florida. It is not necessary to say that I had a good time and forgot that there was a busy world elsewhere. I was busy all the time doing nothing—or fishing. Possibly some people can not distinguish between the two, but if they get a 30-lb Channel bass on the other end of two or three hundred feet of a 15-thread line attached to a reel and a light rod, they would realize they had plenty to do for half an hour or more if they landed said bass.

Without doubt, the Indian River is an ideal place for a piscatorial crank. Any person interested in expansion should catch a toad fish. When you catch him, you have a fish perhaps three inches thick, but in about one minute he is the size of a 10-lb bladder of putty. They are all right as a curiosity but no good to eat. Florida is all right for about three months in the year but I would not like it for steady diet. If they only could convert some of their natural products to cash—what a gold mine they would have. They have plenty of sand to do it with but I fear it is not the kind of sand that is necessary to make money. We often hear the remark that you lack sand. Well, they don't lack sand in Florida. It is everywhere. When you ride on the cars, you breathe sand with a little air mixed in.

Palms are prized highly in the North and are pretty in a conservatory, but are not as pretty where they are so thick you can't see the ground. The large ones which are isolated and in the shade are beautiful, but there are thousands of acres where the timber has been cut off now covered thick with scrubby, sun burnt palms. A great many of the towns are summer resorts, and after tourists leave, the inhabitants have but little income until another season comes. I refer to the natives who live there all the year. I think however from the prices they charge they can get along all right. One gentleman figured it about right when he said "Tourists lived on fish and the natives live on tourists." One of the amusements the native Florida Cracker gets up for the tourist is alligator hunting. They put a circular in the hotels announcing that there will be a grand alligator hunt on a certain day, and the expense for each will be $2. I was primed for alligator hunting although I could not remember of losing any, but a conversation between the promoter and a former victim admonished me that if I was wise I would hang on to my $2. They say that it is a fact that the enterprising alligator hunters plant alligators in some swamp and then get a lot of tender feet and go and capture them alive. Of course the tender feet have no use for them after they take them to the hotel and lie about their hair-raising experience awhile, so Mr. Cracker gets the 'gators and coops them up until he can get another batch of suckers. One gentleman said he had been out three times and one of the 'gators recognized him and was very friendly and liked to be lassoed. 'Gators are kind of human, and like to be carried to the hotels and have the pretty women look at them. You do not know how good I feel to know that I did not get taken in for $2 on that deal. It is the only instance that I recall that I was not a dead easy mark, and bit like a Channel bass, by swallowing the whole bait.

I was surprised to see so much activity in the cities further north. Jacksonville, Fla., and Columbia, S. C., are two busy cities and numerous factory buildings are going up. Cotton mills are being erected in many of the small as well as large places, and it would seem that the South will soon be the market for finished cotton goods of all description, and as the cotton is raised there the finished product can be manufactured there cheaper than in the East.

I did not find many radical changes in prices during my

THE CHICAGO WASHER.

A double rubbing, double process machine. Does work no other can do, because two washboard-like surfaces, self-regulating, moving in opposite directions at the same time, subject the clothes to a gentle and efficient rubbing. Rocks like a cradle. Operated while standing. Easy on operator. Easy on clothes. Avoids back-ache. Washes blankets, comforts, or adjusts itself to a single piece. Best Washer in the world for dainty linens, which will not wear out or injure in the least. Cannot get out of order. Top closes tightly, keeping sickening odor of steam, soap-suds. One live dealer wanted in every town. Secure territory now.

Digitized by Google

absence. Wire and nails, rope, bolts, screws, strap hinges, shovels and most all of the staple articles remain the same as a few weeks ago with the manufacturers, but there seems to be a disposition among jobbers to sell goods at a less price than manufacturers do. This is especially true on bolts, screws and shovels, and prices are anything but regular. One jobber wants to reduce stock on one line and another one on some other line, so it results in demoralization on a great many articles. The market at the close of the year will decide whether this is a wise policy or not. If prices remain firm with manufacturers, and dealers have to replenish their stock at the high price, it will have been an unwise policy, and there is no indication of weakness

J. H. SMITH.

on the general line. There are some articles that show signs of weakness, but I think it is caused by the jobber. Manufacturers are still behind on many goods, and still have contracts at prices considerably below the present price. Most manufacturers have a great many customers among the large retail and wholesale dealers, but cannot sell that class of trade now because jobbers are underselling them. Some of them are getting tired of it and are showing a disposition to meet the jobbers' prices and even better. No one can blame them if they keep up with the jobbers in price cutting. If jobbers do not want to make money by maintaining prices, why should the manufacturer maintain prices. Bolts are still hard to get, steel goods are going to be scarce, and it looks very much as though there will be a scarcity on several seasonable lines. Trade is good notwithstanding the advanced prices, but no doubt a much larger business would be done if building material was lower. Capitalists and home builders are postponing intended improvements owing to the high price of material. The weather is as unsettled as prices and I think all will welcome a settled condition on both.

The Smith Bros. Hardware Co.

THE SAN FRANCISCO TRADE.

This letter is closed April 2d for the 8:30 A. M. Overland Mail, about two hours before the convening in this city of the Interstate Commerce Commission to hear testimony from Hardware jobbers of the Pacific Coast, St. Louis and Chicago relating to overland carload and less than carload rates, the prediction being that the commission will be a full fortnight in session.

Frank N. Johnson, manager of the Simmons Hardware Co., of St. Louis, which is interested in this session of the Interstate Commerce Commission, arrived here two days ago. In an interview Mr. Johnson remarked that the St. Louis Business Men's League would make a strong showing before the Commission, proving to the members that there is a combination in restraint of trade between the Pacific Coast jobbers and the Southern Pacific company, and that prevailing freight rates from east to west enables the coast jobbers to charge the consumer excessive prices. Mr. Johnson's position is that less than carload lots ought not to be brought down to the level of carload lots, but that it is wrong to have rates on less than carload lots so high as to practically bar eastern competition from the coast and enable local jobbers to form a trust.

Charles Watts of the new incorporation, The Alexander-Yost Co., successors to Osborn & Alexander, of which notably prosperous retail house Mr. Watts was manager for twenty-seven years, was also conferred with on the evening of March 31st. From the standpoint of view of this close observing retailer, speaking to the question of prices, no further early-day advance can reasonably be anticipated, but rather the contrary; and, therefore, he denominates the very active local retail trade now everywhere in evidence as being conducted on the hand-to-mouth principle.

"No," continued Mr. Watts, "a consuming interest on the part of the retail trade relative to the matter of carload and less than carload freight rates, which is *casus belli* now raging between the Middle West and Pacific Coast jobbers, is not apparent within local retail trade circles. As a matter of fact, while I am of the opinion that the local retail trade generally has an impression that local jobbers are excessive in charges on some lines, yet, on the whole, because of the efforts of Middle West catalogue houses to do business with coast consumers, naturally our clientals and neighbors, I believe the prevailing sentiment on the part of retailers is a disposition to favor a continuance of differentials now in vogue."

At the fine builders' Hardware, tools and retail cutlery house of Philpott & Armstrong it was learned that their most robust salesman, James G. Chown, had handed in his resignation, and was busy outfitting himself for an early-day start for Cape Nome. Anent trade conditions Mr. Armstrong remarked that trade is just a little bit too active to permit of sufficient time for healthful rest. "The condition with us is that we are away behind in getting out our orders," Mr. Armstrong said.

The retail trade condition referred to by the above dealer in builders' Hardware would dovetail nicely with this excerpt from the last seven days report of an authority on city real estate and building: "Residence building is progressing in all parts of the city with a rapidity which has not been noticeable for years. This building of homes is one of the best signs of general prosperity."

John W. Gates, president of the American Steel & Wire Co., is touring California in a private car with his father and son and the members of their respective families. Of the several dozen plants belonging to this company, the California Wire Works, under the local administration of A. S. Hallidie, is one. Responsive to inquiry a few days ago Mr. Gates said:

"Last year our company exported 12 per cent. more

Digitized by Google

goods than in 1898. This year we will export 75 per cent. more than in 1899. Seven years ago we opened an office in London with two or three clerks and did not expect to do very much business there for a long while. Last year our London office had fifty clerks employed and did $15,000,000 of business. We export to a dozen or more countries. Yes, I was a witness before the Congressional Industrial Commission. I told it that an abolition of protective duties on our steel products would injure the transportation companies more than it would us. In some lines of goods we have orders ahead for eight months and eighteen months for other lines. Our transpacific shipments are constantly on the increase."

THE GRAPHITE TRADE.

Orders come in with clockwork regularity, but conditions are changing.

We notice a disposition to order more frequently and not as largely, but the result has been for the first quarter of this year that the sales have footed up a very satisfactory increase over the corresponding period of 1899.

Salesmen report that the stocks in customers' stores show no signs of being filled up, while an increasing number of inquiries for prices give evidence of a demand yet unsatisfied; in fact, business is good, and prosperity abides with us, apparently contented, and certainly welcome.

We are pushing the big new factory towards completion, and in a few weeks travelers on the Pennsylvania Railroad will be attracted by a handsome chimney of terra cotta useful, ornamental and monumental—such a chimney as dull business would not warrant.

We do not imagine that the Presidential canvass of this year will cause any depressing effect on business. There is too much general prosperity, and people are too busy to give the usual attention to campaign excitements.

Joseph Dixon Crucible Co.

Calculating Machines.

The ancient abacus and its variant, the Chinese swan-pan, are rude calculating machines. So, after a fashion, is a handful of beans or a pile of counters. But the first real attempt at calculation by a mechanical appliance was made about 1650 A. D. by the French philosopher Pascal, then a lad of nineteen. His machine, working by a series of gear-wheels with numbers on them, could add and subtract, but was of little practical use. Better machines were made by the German philosopher Leibnitz and by Professor Saunderson, of Cambridge University, and these led up to what is still regarded as the prince of calculating machines—that of Charles Babbage.

To describe this machine in full, and tell the story of its manufacture, so far as it went, would take several volumes, since even a large quarto volume, devoted entirely to the subject, leaves out a great deal about it that it would be interesting to know. Babbage's machine was designed to calculate elaborate tables and automatically set them up in type, or else supply a mold in which stereo typed plates of the tables could be cast. After many experiments, he constructed his first difference engine, as he called it, for the reason that he employed a method of differences as a general principle on which to base the calculations.

As soon as the first machine was completed Babbage received instructions from the British Government to construct another and more comprehensive one at their expense. Six years after this order was given the Treasury appointed a very strong committee to examine and report upon the portion of the machinery then executed and the design for the whole engine. The result was a very strong expression of opinion in favor of the machine, but the expense was enormous. The government finally declined further supplies, and in 1833 the construction of the engine was relinquished. The second difference engine was a huge instrument of marvelous power, and an illustration that Babbage himself uses as a kind of illustration of a miracle shows one feature of its performances in an interesting way. He said that his machine could go on for years working by the same formula. It could then change without human intervention to another formula for a single calculation, and subsequently resume working by the original formula. But, great as were the powers of this second difference engine, Babbage had conceived an even more elaborate machine, which he called the analytical engine, which would completely supersede the difference engine, on which, in its incompleted state, the government had already spent £17,000. It is not wonderful that the Chancellor of the Exchequer declined to supply any more funds under these circumstances.

Since Babbage's day many small calculating machines of various kinds have been invented. But only five of these machines are worth mentioning. One of these, invented during the past few years, is Burroughes' registering accountant, which performs addition by striking keys like those of a typewriter, and at the same time types on a strip of paper the amounts that have been added. This machine seems to be mechanically successful, but is, we believe, not now commercially obtainable. It is somewhat heavy and cumbersome, requiring ten keys for every column in a row that it is desired to add. Another moderately practical machine is an American invention called the comptometer. This also is actuated by keys like those of a typewriter, and, by means of it, it is simple to add, feasible to subtract, and within the bounds of possibility to multiply or divide; for the latter purposes it is altogether inferior to Tate's arithmometer. A machine that has much that is pleasing about its design is the Brunsviga, but its workmanship is not sufficiently good to stand much wear and tear. The writer obtained one about five years ago, and has long since worn it out.

The only really satisfactory machine for multiplication and division was invented by Thomas de Colmar about 1850. This was subsequently improved in design and workmanship, without being altered in principle, by an Englishman named Tate, and years of hard work at one of these machines has led to the keenest appreciation of its powers. It never makes a mistake, it practically never gets out of order, it performs multiplication and subtraction with ridiculous ease, it makes the abstraction of the square root quite a fascinating operation, and for many purposes can be used by an unskilled operator with entire confidence that the calculations will be correctly performed. The arithmometer is largely used by life insurance companies, and any one whose work consists to any great extent of calculations can scarcely be too thankful that it was invented. It is contained in a box about two feet long and six inches high.—*London Pall Mall Gazette.*

Acetylene Gas.

In comparison with other hydro-carbon flames of equal lighting power, that of acetylene is comparatively cool, a twenty-four candle power acetylene flame producing but little more heat than is developed by an incandescent light of equal power.

Discomfort arising from vitiated or overheated air in coal gas lighted rooms is too common an experience to more than mention.

The so-called "dangers" of acetylene and other objections raised by prejudiced persons ignorant of its properties, or having interests that it is believed will be injuriously affected by the general introduction of the new illuminant, are purely imaginary and unworthy of serious consideration by intelligent people.

We do not contend that acetylene under present conditions is the cheapest light obtainable, but the cost is cer-

Digitized by Google

tainly reasonable and need not prevent any fairly well-to-do individual from enjoying its many advantages.

Half a cent per hour for a twenty-four candle power light cannot be considered an extravagance. Some of our patrons have sent us certificates to the effect that acetylene does not cost them any more than coal oil did for lighting their stores, and we are not prepared to dispute them.

F. Cortez Wilson.

"The American Birmingham."

In 1872, a little less than three decades ago, the citizens of Newark, N. J., proud of the splendid industrial status of their city, the metropolis of an important manufacturing State, invited the world to witness an exhibition of her achievement. But few Americans had realized then the annual productive output of this great beehive of skilled artisans and buzzing machinery. It awakened as keen interest throughout the country as if it were a revelation. Within cannon-shot of the biggest city of the country, Newark had ripened into a robust individuality of her own, which leaped to the farthest mark in the multiplicity of her manufactures. The energy of her people and the ingenuity with which the perfections of mechanisms were made to heighten the capacity of the handicraft work had translated Newark industry into a striking chapter of the great modern epic. The Exposition of 1872 illuminated that so vividly that it counted thereafter in common thought for its full worth as one of the greater interests in the productive problem of the country. Newark was justly proud of her showing.

But, if it was a triumph for Newark pride, it was in still larger degree a powerful element in the expansion of Newark wealth and enterprise. Even during the two months of its existence there was a large increase of trade, and fresh installations of manufacturing enterprise were then planned in the new light shed on the importance of this city as a most attractive sight for such investments of capital. It is within bounds to say that after that exhibition of industrial art and achievement ten men sized the manufacturing biguess of Newark where one had measured it before. Yet that episode of 1872 was a small affair as compared even with expositions less in pretence than world's fairs since that time. In spite of this relative modesty, the "American Birmingham" thrilled with fresh life in every artery of her enterprise as a definite result. Her progress had been of swift pace before. Since, it has advanced by leaps and bounds.

That exposition was nearly thirty years ago. The industrial development of Newark to-day presents a new phenomenon far more startling as a fact of comparative growth than did that tidemark of effort. Time is now ripe for a new exposition which shall exploit the expanded greatness of Newark in a manner befitting her rank among American cities, and that ambition which feeds so richly on what she has done and is now doing. The Evening News takes this opportunity to present its suggestion to the capitalists, the manufacturers, the merchants, the professional men, the public officials, and all the good people of Newark and New Jersey who have an abiding faith and pride in this splendid city. That proposition is that a Great Industrial Fair be held in 1902. It is estimated that Newark will have a population of not far from thrice its population in 1872 by the figures of the forthcoming census. Those who best know the productive energy of intelligence, labor and capital behind this ratio of increase know that her industries and arts have marched with more than equal pace. Her exposition of 1872 told on eloquent story to the world. Her exposition of 1902 would present in vastly greater degree a spectacle of industrial aims carried to a commanding success which has promoted her to a noble status among American industrial centres.

This dress parade of skill, enterprise, equipment and achievement in the battle of industry Newark is now eminently entitled to display. It would not only marshal her own great resources, but those of the adjacent communities closely allied in common interest, and those of the proud commonwealth of which she is the metropolis. Nor would its significance be confined to State limits. In the new order of affairs commercial and manufacturing forces do not stop at imaginary lines. New York, Pennsylvania and other States, especially of the Atlantic seaboard, would without question align themselves with New Jersey in making a Newark Exposition of 1902 one of the most interesting in a series, and notable among the symbols of a period which demonstrates itself by precise methods. It is an age of expositions, for these only prove the dynamics of the time by pictorial display. Occasion has become preguant. Newark has only to mount her rightful pedestal and show the magic of her organizing skill in an exposition foremost among those which do not pretend to international scope, and yet which would not exclude it.

The whole country quivers with a torrent of industrial impulse unknown to its past. We have shot to a world power, towering among world powers. At the beginning of the twentieth century we shall enter the gate of the biggest of epochs. This country will play a star role on its vast stage. The industrial arts of Newark bear an important share in that outpour of distributing forces by which we are expanding to world-wide conquest. An adequate exposition of what she is and can be, inaugurated on the verge of the incalculable world of events now becoming noted, will mark her place in the furthering of the national triumph. And by that display of her resources she will have insured their ripening to a swift harvest, such as she can scarcely now estimate. According to Homer, it was not until Achilles had seen himself in all his shining panoply that he felt the certainty of his resistless strength.—*Newark (N. J.) Evening News.*

The First Automobile.

Automobilism was born in France, in 1769, with the steam carriage of Cugnot. This vehicle was of a crude, rudimentary and incomplete construction. The ideas of Cugnot were an entire century in advance of the mechanical means by which they could be realized. Everything was defective—motive power, steering, control. Nevertheless, the carriage ran, and ran so well, they say, that it broke down the enclosure of the ground on which it was tried. . . . It is in England, toward the third decade of the present century, that we see the idea of Cugnot reappear. The same impulse which moved English engineers to build railroads in order to free the great industrial centres from the economic tyranny of those who constructed canals, urged them to study methods of automobile locomotion on highways. That is to say, in its inception, automobile locomotion was considered as an auxiliary to the railroad, which it really is. Unfortunately, the promoters of new railway lines did not at all understand the respective spheres of action of the machine on the rail and the machine on the road. They took umbrage at automobile locomotion, and, since they had much capital and influence at their disposal, they secured a law from the English Parliament, which killed automobile locomotion effectively. The law ordained that a man carrying a red flag by day, or a red lantern by night, must be kept a hundred yards in advance of every automobile vehicle.

It is necessary to return to France, about 1885, to find the automobile vehicle again in evidence. At that time, MM. Bollee, at Mans, and the Comte de Dion, at Paris, constructed steam vehicles which ran in a satisfactory way. Then Serpollet devised his instantaneous vaporization boilers, which reduce to a minimum the chances of danger, so far as steam engines are concerned. After that time, automobile locomotion became a subject of talk—but the appearance in 1889 of a petroleum motor, with quaternary explosion features, gave matters an impulse which promises continuance.

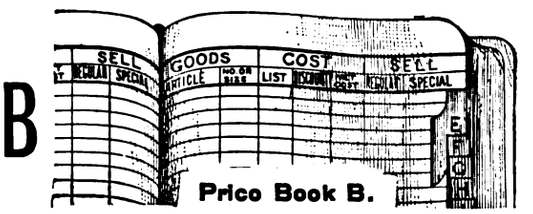
HARDWARE PRICE BOOKS.

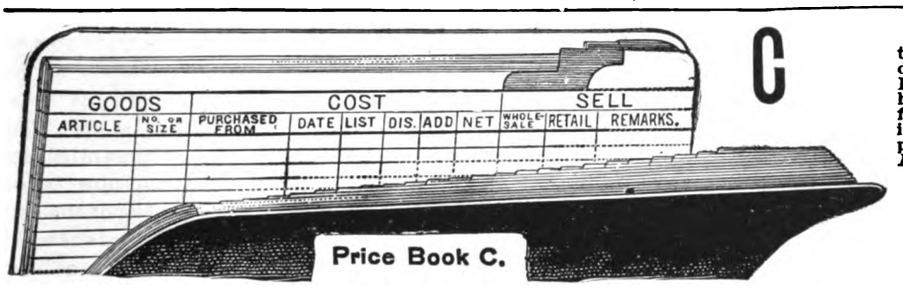
Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.



These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:



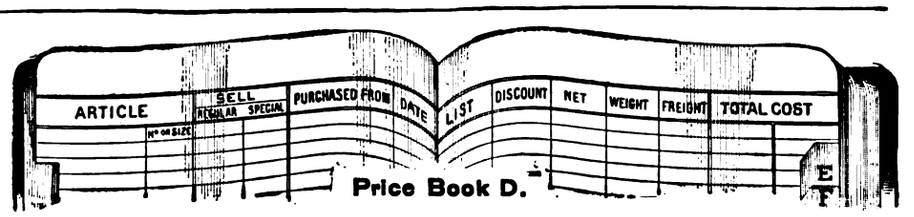
A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***



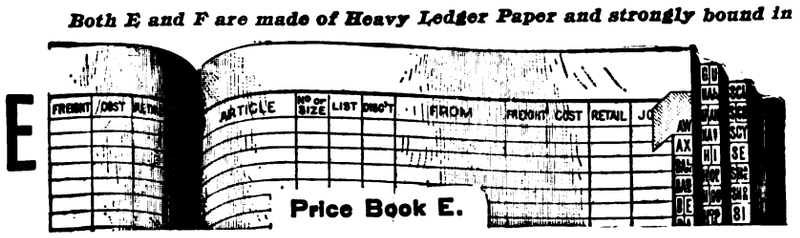
FOUR EDITIONS:

C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

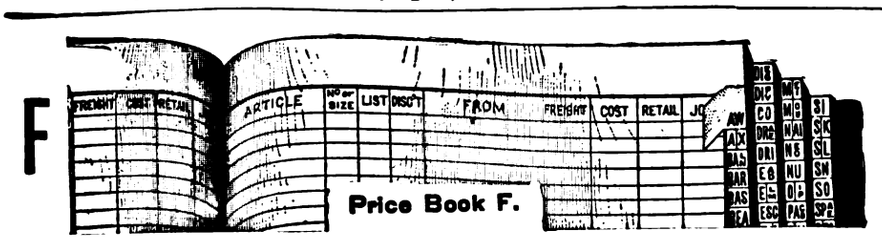
D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to AU	For Chisels,	turn to CHI U	For Iron,	turn to IRO
" Parers, Apple	" PAP R	" Cutlery,	" CUT	" Irons,	" IR'S



Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

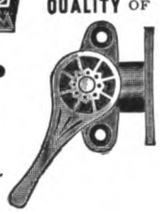
Physical and Accounting Examinations.



In addition to accounting examinations, the charter of The Audit Company of New York authorizes it to examine and report upon the physical condition and economy of operation of Electric Railway, Illuminating and other Companies. It also appraises the values of manufacturing and other plants.

Physical and accounting examinations combined afford a correct basis for corporation financing and for the valuation of corporate securities or partnership interests.

CARY'S PATENT
HINGE
AND
HASP
Designed Especially for
Fruit Crates, Milk, Egg, Cracker and other styles of Boxes, requiring a hinged cover.
CARY MFG. CO.,
19-21 Roosevelt St.,
NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [*Wire Goods*]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"SHOULD MISS IT VERY MUCH."

Morley Bros., Saginaw, Mich. [*General Hardware*]: We receive HARDWARE every issue, and find it of such interest as to oblige us to look through its pages quite carefully, and note with considerable interest the items you publish. It is quite an aid to the writer in his branch of the business, and we wish to say, that we should miss your paper very much indeed, if we did not receive it. W. L. Sandford.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absoute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

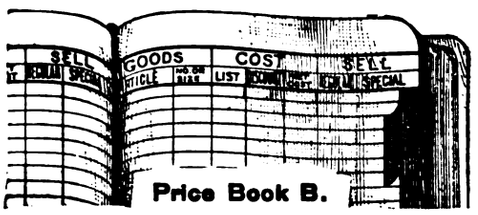
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



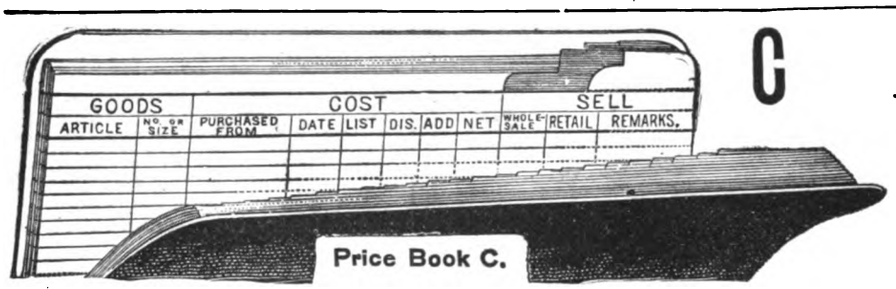
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

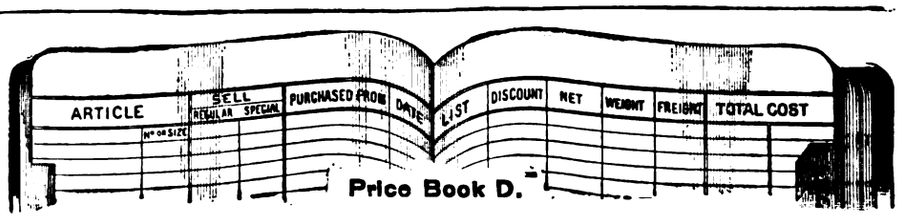
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¼ inches.***

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

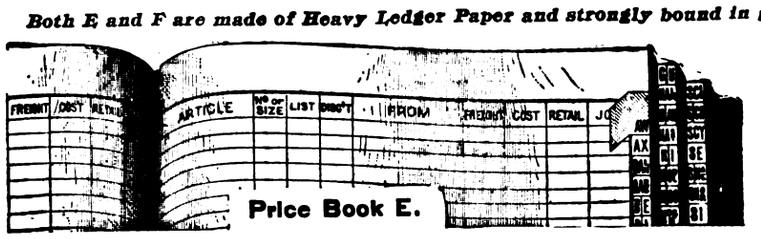
FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.

MULTIPLE INDEX PRICE BOOKS.



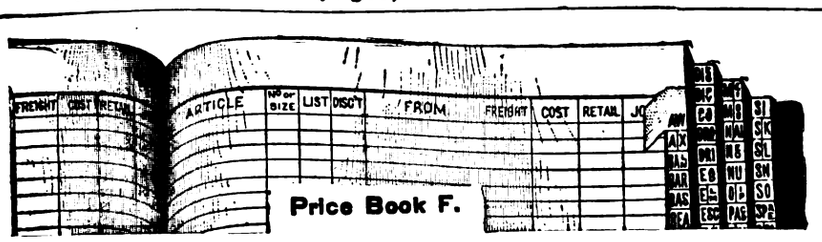
A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to	AU	For Chisels,	turn to	CH$^{I}_{U}$	For Iron,	turn to IRO
" Parers, Apple	"	PA$^{P}_{R}$	" Cutlery,	"	CUT	" Irons,	" IR'S

Note.—In Price Books E and F there is an Index Character to EVERY PAGE.

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

E



Price Book E.

We Want the Earth and We Want it Fenced in.

THE

ELECTRIC DROP STEEL FENCE RATCHET.

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

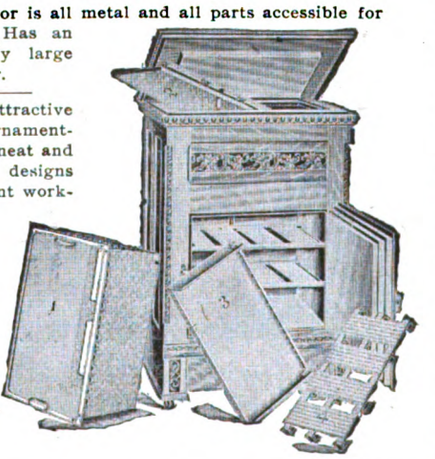
1st. It is simplest.
2nd. It is the lightest and strongest.
3rd. It is the most compact and rigid; no loose parts.
4th. Will tighten any length of wire desired.
5th. Adjustable to expansion and contraction.
6th. Can be attached to any point on the wire.
7th. It will tighten the wire uniformly because it draws equally from each way.
8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
9th. Can be used on any kind of post, either wood or iron.
10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
11th. When wire becomes loose or sags from use, it can be instantly tightened.
12th. No special wrench required; any wrench on the farm will operate it.
13th. The most important feature; it can be bought for **Less Money** than any other good ratchet on the market.

MANUFACTURED BY

Electric Oil Stove Co., JACKSON, MICH.

FACTORIES AT HOMER, MICH.

Eclipse Cleanable Refrigerator.



"A MERITORIOUS SPECIALTY."

The only removable ice chamber refrigerator in which the cold dry air is taken to the lowest point in the provision room, through a removable flue, thus creating a positive circulation.

The upward current of air through the provision chamber is so swift that moisture and odors are quickly forced to the ice, the proper condenser and purifier.

The interior is all metal and all parts accessible for cleaning. Has an exceptionally large ice chamber.

Made in attractive plain and ornamental finishes, neat and attractive designs and excellent workmanship.

IT IS NOT A CHEAP REFRIGERATOR

WHEN we began making our **400 Line of Cutlery,** we did not realize what we had. The wonderful sale and the perfect satisfaction and unanimous praise of these goods has opened our eyes. You see the fork is like any silver 4-tined fork. The tines are well made and plated with a combination which looks as well as silver and wears longer. The handles are solid and put together in such a way that they never can get loose or come off. They are absolutely hot water proof. The bolster is exceedingly beautiful, and the whole thing commends itself at once to the eye of the purchaser. We think hereafter we can produce a quantity large enough to supply the demand, and solicit orders and inquiries.

The Berlin Iron Bridge Co., of East Berlin, Conn., will remove their New York office on May 1st to the St. Paul Building, No. 220 Broadway. The office will continue in charge of Seymour N. Robinson, their present New York representative.

The Engineering and Mining Journal's figures on the copper production of 1899 are just out. They give the output of the United States as 265,156 tons, a gain of 25,915 on 1898. For the rest of the world the production is put at 208,662 tons, a gain of 13,574 tons. The total increase is a scant 40,000 tons, nine per cent. of the output of the previous year.

The Cleveland (Ohio) Twist Drill Co. has introduced in its factory the system of awarding, semi annually, prizes for valuable suggestions made by employes. A printed notice to employes has been issued, in which such suggestions relating to the business are invited. Prizes are to be awarded as follows: First prize, $50; second, $20; third and fourth, $10 each; fifth and sixth, $5 each.

Among the copper mining companies distributing dividends during the quarter ending March 31st, the largest individual dividend paying company was Calumet and Hecla, with $2,000,000 to its credit, while the Amalgamated Copper Co. comes next, with $1,500.000, and Boston and Montana third, with $1,200,000.

It is reported that the Union Metallic Cartridge Co., of Bridgeport, the Winchester Arms Co., of New Haven, and the Peters Cartridge Co., of Cincinnati, have decided not to exhibit at the Paris Exposition. All these companies had planned to have large exhibits but found the rules too strict.

The Nimmo Fence Co., of Cincinnati, have just completed their new shop on Elsenor Avenue and C. P. & N. R. R, which will have an output several times larger than that of their present shop on Fourth Street. A new catalogue will be ready for the trade in a few days.

The Ferracute Machine Co., of Bridgeton, N., J., will have three exhibits of presses, dies, and other sheet-metal machinery at the Paris Exposition of 1900. In the Main Exhibit Block 8, American Machinery Department, Champ de Mars, and the Department of Coining Machinery, United States Government Exhibit, Champ de Mars, and Heavy Machinery in Block 5, Machinery Annex, Vincennes.

The United States Supreme Court has, since our previous issue, decided the cases involving the stamp tax as it applies to express packages, the question being whether the shipper or the carrier should pay the charge for stamp on packages. The opinion which was handed down by Judge White was favorable to the express companies. There were in fact two cases before the Supreme Court involving the question at issue, but the opinion as given was based upon the case of the American Express Co., against Attorney-General Maynard of the State of Michigan. The case was brought before the Supreme Court after a decision of the State Supreme Court, of Michigan, which decision was adverse to the claims of the express companies. The later opinion reverses the State Court's decision.

Considerable interest is lately given to the foreign market on pig iron, which is held at constantly advancing values, recent quotations making an advance of $2.25 within a month. It is thought should the price be pushed up a little higher it would place American pig iron on a firm exporting basis, notwithstanding the present high freights across the ocean.

The Terre Haute Shovel & Tool Co., Terre Haute, Ind., have ready for shipment a large consignment of shovels for Hong Kong, China, and also one for Buenos Ayres, Argentine Republic. That company has received orders for goods to be shipped to Mexico and equally important countries.

It is reported that Wickwire Bros., Cortland, N. Y., are considering the advisability of adding to their wire manufacturing plant, the manufacture of the rods used in their wire which they have hitherto purchased. This plan, if put into execution, would necessitate nearly doubling their present plant.

The Postmaster of New York has received from Washington the first lot of the small bound books containing one, two and four dozen two cent postage stamps. Only one cent extra is charged for a single book, and 1000 of the twelve-stamp books can be bought for $250, the same number of twenty-four-stamp books for $490 and a like supply of the forty-eight-stamp books for $970. As soon as practicable the sale of the new books will be extended to all the branch and sub-stations of the Postoffice in the city.

Under the name of Mertes & Krupp, a new firm will commence business in Hardware and house furnishing goods, on or about May 1st, in Toledo, Ohio. The two partners composing the firm have been in the employ of the Stollberg & Clapp Co., of that city, for a number of years, and are well known as industrious and ambitious Hardwaremen. Mr. Mertes will assume charge of the wholesale department, and Mr. Krupp, the retail part. It is their intention to carry a full and complete assortment of goods in the lines above mentioned, and manufacturers are requested to favor them with their catalogues, price lists, etc.

H. D. Smith & Co, Plantsville, Conn., manufacturers of vehicles and special drop forgings, established in 1850, have opened a New York office in the Postal Telegraph building, No. 253 Broadway, where samples of their work may be seen. This company have recently been reorganized and are now under an entirely new management. Their well-known trade mark is represented by an S in a circle being used on their make of carriage and other forgings. W. D. Walkley, the vice-president of the company, and formerly of the Peck, Stow & Wilcox Co., will be in charge of this office, and associated with him will be L. H. Schmitt, who was for many years also identified with the same company. In addition to a line of carriage forgings, which are reputably known, the company call particular attention to their willingness to make estimates on high-grade drop forgings for automobiles, bicycles, typewriters, sewing machines, etc. Correspondence having reference to this class of work is solicited.

HARDWARE

VOL. XXI. APRIL 25, 1900. NO. 2.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 Chambers St., New York.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

"Hardware" to Its Friends.

We have been greatly pleased at the manifestations of appreciation and approval received since the publication of our Anniversary Number. They come from the earnest friends of *Hardware*, who take pride in the inspiration of such an achievement, indicating as it does, the abundant prosperity which it has been our good fortune to enjoy. It greatly upholds the confidence in our paper's progress, which we know will make "the future skies serenely clear and fill our hearts with calm content."

Hardware was never on so firm a foundation for usefulness as under its present prosperous conditions. We are confident our readers cannot help but notice the improvement, typographically and otherwise, which has been in evidence throughout the past year. Although published at a nominal rate for subscription, we have made no changes from motives of economy in the many interesting departments of our paper, but instead we contemplate several changes in the near future tending to increase its popularity and add to the interest of a semi-monthly perusal of a paper devoted exclusively to furthering the aims and advancing the views of the Hardware industry.

This is a field large enough, if properly cultivated, to satisfy our sincerest endeavor, and we are proud to ask the co-operation of our many friends in this desire to prove useful to the trade, whose prosperity it is our highest ambition to advance to the fullest extent of our increasing influence.

Editorial Trade Review.

The conditions of general trade throughout the country present few features of unusual importance. The retail buyers are filling their shelves with no speculative overstock. Seasonable goods are in excellent request, and some of them still difficult to obtain in usual quantities. Advance orders have been unusually good as to volume for such articles as form the features of the Spring demand: Lawn mowers, haying tools, green wire cloth, poultry netting, etc; and as the season advances and the Spring warmth increases in intensity, no retrograde influence will be noted in the general sales in the trade centres, and this will apply to all sections so far as observed.

All over the country money is in plentiful supply at no restraining rate of interest. New and large enterprises are again considered by capitalists, and important interests that have been lying dormant for months are awaking into active progression, and command attention by a prospect for an undoubted profit. The season in many sections has been backward but with Spring weather, trade confidence will more fully assert itself; goods will move in lively fashion; indications of any underlying weakness will entirely disappear, and the slight concessions in price considered essential to inspire sales will no longer be needed or relied upon to obtain business.

Reports from Southern trade jobbers indicate that the season just closing with them has been an excellent one, the demand still continuing with excellent prospect for future crop conditions and the belief that the future will see the chief crop of the South marketed under conditions much more favorable as to price than has obtained in many seasons.

The bicycle trade, still a prominent item in the Hardware trade of the country, has surprised many of the dealers who have held back from purchasing the usual Spring supply. Manufacturers have been unable to make prompt shipments by usual transportation facilities, and rush orders are again in evidence. The low prices now prevailing and the good grade of the product offered are responsible for the enthusiastic conditions surrounding a branch of business which many fancied had about run its course.

An Ill-Judged Announcement.

It was an unfortunate confession publicly made by those high in authority with the American Steel & Wire Co. that overproduction had been the prominent feature of their productive facilities of late; and when this was followed by the announcement that twelve plants controlled by them, affecting the labor of upwards of 10,000 men would be shut down temporarily, the trade was taken by surprise. This unexpected statement was made at a time when the big buyers were holding off from heavy purchases, in order to weaken the market to just the extent an announcement of this weight would warrant. It has certainly made hesitating buyers more timorous than ever, and jobbers overloaded with full stocks, still more anxious to sell by cutting previous quotations.

It is difficult to predicate the outcome under such unforeseen circumstances. It only shows how true was the statement, made when the rod mill employes struck for advanced pay, that the company had already stocked up in anticipation of that movement among their workmen, and had 250,000 tons of various products ahead. It is the general feeling in the trade that wire nails are at the top-notch price, and other wire products equally as near; and to market the possible production of the mills under discussion, some concession, not indicating a collapse in iron and steel generally, is fairly to be anticipated.

It should be borne in mind when comparisons are made in regard to prices that but few lines of goods are held at anything near the extravagant advances noted in the wire products. Conservative manufacturers, not desiring to suspend the ordinary trade move-

Digitized by Google

THE NEW YORK PUBLIC LIBRARY
ASTOR, LENOX AND TILDEN FOUNDATIONS

ments in their production, have not made abnormal prices even under the temptation afforded by a steady demand; and should any recession from the highest point be made in this leading staple, wire nails, it need not produce any unreasoning revulsion in that sanguine judgment which grounds the belief we have in future conditions of continued prosperity. Let us not permit the ill-judged fears of a pessimistic purchaser to take the reason prisoner, and cause us to believe the bottom is on the edge of dropping out of things generally.

Standard Tool Co.'s Paris Exhibit.

The Standard Tool Co., of Cleveland, Ohio, have shipped to Paris one of the most striking and attractive exhibits in their line of manufactures that will be found in the Paris Exposition.

It consists of two elaborate sample cases, both of which are remarkable for an elegant simplicity in construction and appearance, furnishing a setting for the tools exhibited, which are shown in great variety, accurately finished for actual work. The larger case is pyramidal in form, enclosed in plate glass, and resting on a base of rosewood and black marble. On one side of the pyramid is the trade mark of the firm, consisting of a shield bearing their name, the design of which is worked out in small tools and surrounded with the various sizes of drills which form the finished product of this company. On the other sides are displayed their line of reamers, arbors, taps and milling cutters. About the base is clustered, in great variety, mandrels, chucks, drills in sets and large drills, also many special tools, not ordinarily listed. All of these tools are made from the highest quality of tool steel, the smallest sizes from P. Stubs' wire, and will undoubtedly command the admiration of all beholders.

The smaller three-cornered case is almost wholly composed of plate glass resting on a marble base, each shelf in the exhibit reflecting drills, milling cutters and reamers, of such mechanical excellence that it is superfluous to add that the company have won a foremost place as makers of small tools which are now, and have been for a long time, used in the largest manufactories of the world. The time and care that have been given to the selection and preparation of this complete mechanical exhibit indicates the company's interest in fostering and encouraging the foreign trade already established by them.

Phenomenal Growth of Our Production of Copper.

The rapid growth of the copper industry in the United States and the large proportion which this country supplies of the world's copper consumption is illustrated by some figures presented by a German publication, entitled "A Century of Copper," a translation from which has just reached the Treasury Bureau of Statistics. It shows that the United States has during the decade 1891–1900 produced more than half of the copper of the world, while in the preceding decade it supplied but about one-third of the world's production, and in the decade 1871–80 the proportion supplied by the United States was only about one-sixth of the total.

The growth of copper production in the century has, according to this statement, been very rapid, being in the first decade 91,000 tons, in the fifth decade 291,000 tons, and in the tenth decade, which ends with 1900, 3,463,000 tons, of which 1,963,000 tons is supplied by North America, the large proportion of this being from the United States.

The greatly increased demand for this material is further illustrated by the fact that although the production has increased from 505,999 tons in the decade 1851–60 to 3,643,000 in the decade 1891–1900, the average price, according to the publication in question, has only fallen from £111 per ton to £52 per ton, production having during that time increased more than sixfold, while the price fell but about one-half.

While the world's production has increased with startling rapidity during the century, that of North America has by far outgrown all other parts of the world, and it is apparently through the enormous supplies of North America —chiefly the United States—that the world's production has so greatly increased. A table contained in this publication, which gives the production of each decade by principal countries, shows no record of production in North America earlier than the decade 1841–50, in which period the total production is given at 2,400 tons, while in 1851–60 it was 37,000 tons, in 1861–70 97,000 tons, in 1871–80 186,000 tons, in 1881–90 730,000 tons and in 1891–1900 1,963,000 tons, the copper production of North America in the decade 1891–1900 being thus two and one-half times as great as in the preceding decade and ten times as great as in the decade 1871–80.

In the matter of consumption the figures are equally interesting. A table showing the consumption of England, France, Germany and North America gives the total consumption in those four countries at 409,583 tons in 1899, against 268,447 tons in 1893, being an increase of about 50 per cent. during the period under consideration, while in North America alone the production is given at 77,433 tons in 1893 and 162,000 tons in 1899, the growth being over 100 per cent. during the period.

The rapid increase in the share of the world's copper consumption supplied by the United States is illustrated by the export figures of the decade just ended, which show that the exportation of copper in ingots, bars and plates, which in 1890 amounted to 20,237,409 pounds, was in 1899 254,987,164 pounds, while the total value of copper exported, exclusive of ore, increased from $2,349,392 in 1890 to $35,983,529 in 1899.

The following table shows the value of copper manufactures of all kinds, including copper in bars, plates and ingots, exported in each year from 1890 to 1899:

1890	$2,349,392	1895	$14,468,703
1891	4,614,597	1896	19,720,104
1892	7,226,392	1897	31,621,125
1893	4,525,573	1898	32,180,872
1894	19,697,140	1899	35,983,529

Constantly Increasing Growth of Our Exports.

March exportations are larger than those of any corresponding month in our history, and double the average for the month of March during the decade ending with 1896. The total exports of the month, as shown by the figures just reported by the Treasury Bureau of Statistics, are $134,313,348, against $104,559,689 in March of last year, $75,574,185 in March, 1896, and $66,516,571 in March, 1893. Thus the exportations of March, 1900, are more than double those of March, 1898, and 25 per cent. greater than those of March of last year, and, as already stated, are larger than those of any preceding March in our history. Indeed, the reports of the Bureau of Statistics show but one month (December, 1898) in the history of the export trade of the United States in which the total exportation was as large as that of March, 1900, the month of December usually being the heaviest export month of the year.

Not only are the March, 1900, exports the heaviest in the history of our foreign commerce, but the total for the nine months ending with March is also greater than that of any corresponding nine months in the history of our exports. The total exportations in the nine months ending with March, 1900, are $1,053,832,675, against $947,919,405 in the corresponding months of last year, $925,905,326 in the corresponding month of 1897, and $515,499,635 in the corresponding months of 1886, having thus doubled in fifteen years and increased over 53 per cent. since 1898.

The steady increase in exportations is the more remarkable in view of the fact that exports of agricultural products are only about the same as those of the corresponding

Digitized by Google

months of last year, the notable increase of more than one hundred million dollars in the nine months in question being largely in manufactures. In the eight months ending with February (the details for March not yet being completed) the exports of agricultural products were practically the same as those of the corresponding eight months of the preceding year, while those of manufactures showed an increase of $61,000,000.

These astonishing figures of the March exportations make it apparent that the total exports of the fiscal year 1900 will exceed those of any preceding year in our history, since for the nine months of the fiscal year for which the figures are now at hand, the total exports are $105,000,000 greater than those of the corresponding months of any preceding year. It seems probable that the total exports of the year will reach $1,300,000,000, and that manufactures will supply fully $400,000,000 of this vast sum.

Imports also show a marked increase over last year, the principal increase being in manufacturers' materials, which in the eight months ending with February were $60,000,000 greater than in the corresponding months of the preceding year, while manufactured articles for use in the mechanic arts also showed an increase of over twenty million dollars.

The following table shows the total imports and exports in March of each year beginning with 1893:

March.	Exports	Imports.
1893	$66,516,571	$86,663,524
1894	70,640,830	66,031,689
1895	65,161,847	69,295,493
1896	75,574,184	66,455,663
1897	87,282,247	76,351,444
1898	112,620,496	61,562,183
1899	104,559,689	72,820,746
1900	134,313,348	86,442,177

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 143 Chambers Street, New York City.

♣

QUESTION.—Has a stockholder of a New York corporation the right to examine the books of that corporation? If so, where and how often can the right be exercised?

REPLY.—1st. The stockholders of a corporation have the right to examine the stock book of such corporation and to make extracts therefrom. 2d. Such stock book shall be open daily, for the inspection of its stockholders, during business hours. In the matter of Steinway the Court of Appeals of this State, last June, rendered a very learned and interesting opinion upon the subject in question. The direct question submitted to the Court for decision was: Has the Supreme Court the power, upon the petition of a stockholder, to compel by mandamus the corporation to exhibit its books for his inspection? In deciding this question, the Court holds that a stockholder has the right at common law to inspect the books of his corporation at a proper time and place, and for a proper purpose; and that if this right is refused by the officers in charge, a writ of mandamus may issue in the sound discretion of the Court, with suitable safeguards to protect the interests of all concerned. The Court should, however, proceed cautiously in this matter, and take due precautions as to time and place, so as to prevent interruption of business or other serious inconveniences. In 1892 the Stock Corporation law was passed; section 29 thereof provides that every stock corporation shall keep a stock book, which "shall be open daily during business hours for the inspection of the stockholders and judgment creditors, who may make extracts therefrom." This section, however, deals with the inspection of the stock book, but is silent as to the other books of the corporation. In considering this and other statutes on the subject, the Court holds that the common law right of a stockholder, with reference to the inspection of the books of his corporation as above set forth, still exists unimpaired by legislation.

♣

QUESTION.—Some time ago a man died owing me about $500. I understood that he left considerable property, and died a wealthy man. As soon as I heard about his death, I called upon his administrator and was told to file proof of my debt with him, which I accordingly did. My claim was rejected by the administrator without giving any good reason for his action. He also stated that claims which were preferred to mine by law had to be paid first, and that when these were paid there would be nothing left with which to pay my claim. Kindly advise me, first, what I should do in regard to my rejected claim, and, secondly, what debts of an estate must by law be paid first?

REPLY.—1st. If the administrator rejected your claim and did not agree to refer it to referees for determination, you must begin suit upon your claim within six months after it was rejected, or if not then due, within six months after it, or some part of it, became due, or you will lose your right of action thereon. These facts present an instance where the period in which to bring an action on a simple contract is reduced from six years, as is ordinarily the case, to six months. 2d. Claims against an estate must be paid as follows: First, debts entitled to preference under the laws of the United States. Second, taxes assessed prior to the decedant's death. Judgments docketed and decrees entered according to priority. Third, all bonds, sealed instruments, bills and notes, and unliquidated demands and accounts. No preference is given any debt over other debts of the same class, except those in the third class, We would advise you to consult a lawyer at once.

♣

QUESTION —A friend of mine, recently, requested me to become the executor of his estate. As he was about to make his will, he wished to know whether or not I would accept this trust. I told him that I would do so. Kindly inform me to what commissions I am entitled for the performance of any duties as executor.

REPLY.—An executor in New York State is entitled to a commission of five per cent. on the first $1000, two and one-half per cent. on the next $10,000, and one per cent. on the balance of the amount passing through his hands.

♣

QUESTION.—I am a resident of New Jersey, and am desirous of suing a man in New York. I have been told that if I brought suit in New York I would have to deposit some security for the expenses of the suit. Kindly inform me through your legal column whether or not this is so, and if so, what amount I must deposit.

REPLY.—A statute of this State provides that if a non-resident brings suit in a court of record of this State, he must, on demand, give security for costs to the amount of at least $250. The security may be by two or more resident sureties, or by paying the money into Court. If the security for costs is not given after it has been duly demanded, the plaintiff's attorney becomes liable for such costs to the extent of $100, and the plaintiff's suit may be dismissed.

New England Hardware Dealers' Association.

At a meeting of the New England Hardware Dealers' Association held at the United States Hotel, Boston, during the afternoon of April 11, in consequence of invitations having been extended to them to be present on that occasion, a number of manufacturers and their representatives responded and met the members of the association. President Burditt said the object of the meeting was to see if some plan could not be devised by which the Hardware needed by contractors and others of similar importance could not be furnished by retail Hardware firms.

The subject was pleasantly discussed by a number of those present representing both interests, those of the dealers and also of the manufacturers, and on motion of D. Fletcher Barber a committee of five was appointed by the chair whose duties were defined as the providing of a plan to adjust these differences and report at the next meeting of the Executive Committee. President Burditt appointed as this committee J. B. Hunter, D. F. Barber, H. G. Janvrin, E. A. Loomis and S. H. Thompson.

A banquet, one of the features of the monthly meeting, followed this discussion, the manufacturers' representatives being the special guests of the occasion. After dinner, upon resuming the regular business of the evening, the slips obtained at the previous meeting from the dealers present on that occasion were passed around for reference. They presented great diversity in the quotations, evidencing the need of some system that would present uniformity in action. The following will indicate the differences:

Wire Nails per keg, base	$3 85 to $4.25
Cut Nails, per keg base	$3.05 to $3.70
Wire Nails per pound	5 to 6 cents
Cut Nails, per pound	4½ to 6 cents
Rope, p r pound	16 to 25 cents
Sheet Zinc	9 to 11 cents
Cut Zinc	9½ to 11 cents
Screws, discount	70 to 80 per cent.

The discussion of the evening was opened on the subject of "What new lines of goods can be added to the Retail Hardware stock that can be sold with profit to the dealer?" This was participated in by a number of members, who named a series of lines that had been utilized in order to increase the profits arising from an intelligent prosecution of the business. Among these were noted sewing machines, bath cabinets, gas stoves, stove linings, wringer rolls and carpet sweeper repairs.

E. A. Loomis, of Providence, referred to their successful addition of electrical supplies, which was started in a small way and in ten years has reached an importance remarkable in its extent. Photographic supplies was a line also referred to as being desirable, but such lines as electrical and photographic supplies, it was thoroughly understood, required skilled assistants, fully conversant with the business, in order to achieve success.

Mr. Barber made reference to a repair shop established on his premises, which was one of convenience and profit and where key fitting, drilling and similar mechanical work was provided.

The discussion was one of interest to those present, and some of the suggestions will no doubt be acted upon.

During the evening H. C. Fay, of Athol, Mass., was elected to membership, and A. S. Morss having resigned from the original Investigating Committee D. Fletcher Barber was appointed in his place.

The Entertainment Committee for the evening consisted of D. F. Barber, H. G. Janvrin and S. H. Thompson. Music was furnished by former president Parlin and Robert L. Van Buskirk

The Entertainment Committee for the May meeting are William H. Warren, Boston; James P. Mackay, Brookline, and William E. Whitney, Somerville.

The discount list is the soul of the catalog.

Berlin Iron Bridge Co.'s New Plant.

The Berlin Iron Bridge Co., of East Berlin, Conn., have made an extensive purchase of real estate at Pittsburgh, Pa., and have already started on the new plant to be located at that point. They have bought fifty acres of land between the Pennsylvania Railroad and the Ohio River, upon which they will locate their plant, and in addition fifty acres of land back from the river, and upon this latter piece they will put up a number of houses for the use of their employees. The foundations of the buildings are now being put in place, and it is the intention that this plant will be in complete operation by the 1st of July, as the orders for the machinery equipment have been placed for some months.

The office building will be sixty feet square and four stories in height, and will be of firepro of construction throughout. The template shop will be sixty feet in width and 300 feet in length, and two stories in height. The main shop will be constructed entirely of steel and glass, and will be 220 feet in width and 700 feet in length. The entire plant will be equipped with new machinery, which will be of the heaviest and most modern design, and the orders have been placed with the Hilles & Jones Co., of Wilmington, Del., the Cleveland Punch & Shear Works Co., of Cleveland, Ohio, the Niles Tool Works Co., of Hamilton, Ohio, and the Brown Hoisting & Conveying Co., of Cleveland, Ohio.

The hydraulic plant will be very elaborate, and will be furnished by Wm. H. Wood, of Media, Pa. The floor surface of the main shop is to be controlled by twenty-three traveling cranes of various sizes and design, of the heaviest capacity, all furnished by the Chisholm & Moore Mfg. Co., of Cleveland, Ohio. The fuel used will be natural gas, the engines being furnished by the National Meter Co., of New York. The machinery will be operated throughout by electricity, the generators and motors being furnished by the General Electric and Westinghouse people.

The Berlin Iron Bridge Co. have had a very large experience, extending over long years in designing and building manufacturing plants, and they intend that this their own plant shall be the most perfect and complete of its kind in the world. No pains or expense have been spared in making it such, and the company are now taking contracts to be built at this plant for delivery after July 1st. The capacity will be from 3000 to 4000 tons per month.

Fire-Proof Cloth.

No elaborate statistics are necessary to prove that many fires might be prevented if carpets, curtains, draperies and clothing were non-combustible. This is precisely what a firm of German manufacturers propose to bring about. After several years of experimenting they announce the discovery of a chemical treatment that will render any fabric of cotton, linen, wool or fibre fire-proof. The process is cheap and adds but little to the weight of the article treated.

The facts in the case are reported by the American consul at Friedburg. The consul has tested the treatment upon various grades of cloth. He notes no injury to the coloring or strength of the fiber. When a candle flame was brought in contact with the treated cloth there was charring at the immediate point of contact, but no spread of fire; saturated with kerosene, the oil burned vigorously, the fibre was charred, but the cloth was not burned. Applied to wood it has the same effect. The chemicals, however, are soluble in water, so the process is not useful for outdoor use, and garments when washed must be re-impregnated.—*Stoves and Hardware Reporter.*

The Immense Growth of Commerce on Our Great Lakes.

No feature of the commerce of the United States, whether domestic or foreign, shows a more wonderful development than that carried upon the Great Lakes where navigation is about to resume for the season of 1900. A growth in our foreign commerce from one billion dollars in 1872 to two billion dollars in 1900 is remarkable, and an increase of our exports from 444 million dollars in 1872 to 1227 million dollars in 1899 is even more striking, but this growth is insignificant when compared with the growth of commerce on the Great Lakes as measured by the few available measuring rods which the present rather unsatisfactory statistical system furnishes. Yet the fact that navigation on the Lakes is about to open and that

THE GREATEST "SEASON" EVER KNOWN

is confidently predicted by those familiar with the traffic there, makes some facts, which the Treasury Bureau of Statistics has just presented in one of its monthly publications, especially interesting.

The single point at which accurate statistical statements have been kept during a considerable term of years is at St. Marys Falls Canal, which connects Lake Superior with Michigan, Huron, Erie and Ontario; and by a study of these figures it is practicable to compare in some degree the growth of internal commerce on the Great Lakes with that of our foreign commerce. As already indicated, the foreign commerce of the United States has doubled since 1872, and the exports have trebled during that period. During the same time the tonnage of vessels engaged in the commerce passing through the St. Marys Falls Canal increased from 914,735 registered tons in 1872 to 21,958,347 tons in 1899, the increase having been over 2000 per cent. as against an increase of 100 per cent in total foreign commerce and 200 per cent. in exports.

THE GREAT ARTICLES ENTERING INTO THE COMMERCE

on the Lakes are wheat, flour, and other grains; coal, iron and lumber. The statements of the quantities of these articles passing through the Soo Canal illustrate the growing utilization of this great water route for transportation of these articles so readily transported in bulk. In 1871 the number of bushels of wheat passing through the canal was 1,376,705, while in 1899 the number of bushels was 58,397,335, or more than forty times as much as in 1871. Meantime the receipts of wheat at Buffalo increased from 14,000,000 bushels in 1872 to 83,000,000 in 1898, while the total receipts of grain of all kinds (including wheat in the form of flour) received at Buffalo by lake, increased from 62,000,000 bushels in 1872 to 267,000,000 bushels in 1898. Meanwhile the exportation of wheat and wheat flour increased from 39,900,000 bushels in 1872 to 232,000,000 bushels in 1899, the increase in transportation by lake thus being much greater proportionately than the increase in exports from the seaboard. Transportation of flour through the Soo Canal has increased with even greater rapidity, growing from 136,411 barrels in 1872 to 7,114,147 barrels in 1899; while grain other than wheat increased from 445,774 bushels in 1872 to 30,000,000 bushels in 1899.

IN METALS AND MINERALS THE GROWTH OF TRANSPORTATION

on the Lakes is quite as striking as in breadstuffs, the quantity of coal carried on the Soo Canal having increased from 80,815 tons in 1872 to 3,940,887 tons in 1899. Coal from the Pennsylvania and Ohio fields is supplied at low freight rates to the Lake Superior region where coal production is light and fuel greatly in demand, as the vessels which carry the iron ore, grain and flour from the Lake Superior region carry coal on their return trips at nominal freight rates, and as a consequence the coal passing through the Soo Canal has, as already indicated, increased from 80,815 tons in 1872 to 3,940,887 tons in 1899. The product of the Lake Superior region which is poured through the Soo Canal in increasing quantities every year is, after grain and flour, which have been already mentioned, chiefly iron ore, copper, and lumber. The iron ore shipments through the canal increased from 383,105 tons in 1872 to 15,328,240 tons in 1899; copper, from 14,591 tons in 1872, to 120,000 tons in 1899, and lumber, from 1,742,000 feet in 1872 to 1,038,057,000 feet in 1899. The report from which these figures were obtained indicates that they also include the traffic through the Canadian canal (lying just alongside St. Marys Falls Canal) which was opened to commerce September 9, 1895.

SOME ADDITIONAL AND EQUALLY INTERESTING FACTS

are shown for the period of 1887 to 1898. These relate to the proportion of freight carried by American and Canadian vessels, value of American and Canadian craft, and cost of transportation per mile ton, of freights passing through the canal. It shows that the percentage of freight carried by Canadian vessels which in 1887 was 7 per cent. of the total, was in 1898 only 2.2 per cent. The value of Canadian craft passing this point was in 1887 $2,089,400 and in 1898 $2,491,900; while that of American craft, which in 1887 was $17,684,550, was in 1898, $45,199,800, the value of Canadian craft having increased less than 25 per cent., while that of American craft had nearly trebled and the total registered tonnage, as already indicated, having inincreased from 913,435 tons in 1872 to 21,958,347 tons in 1899. With this increase in tonnage and business comes an equally striking decrease in freight rates, the cost of transportation per ton per mile having fallen from 2.3 mills to .79 of one mill in 1898.

Deep Water Transportation.

A writer in *Ainslie's Magazine* says that the Great Lakes have become the main artery of the richest commercial blood of the United States. He asserts that one-third of the population of the country is dependent on these lakes for its export and import trade. These waterways are in touch with the richest and most prosperous agricultural territory of the Western hemisphere, together with the most productive mines, and it is worthy of note that within a radius of 400 miles from the city of Cleveland one half of the population of the United States is located. It is a fact well established, and necessarily must be so, that deep water transportation is far below the cost of transportation by rail. In fact, it is computed that the cost of water transportation by steam, when the voyage is of any considerable length, is about one-fourth the average cost of transportation by rail, while by sailboat it is only about one-eighth of the latter. In the year 1898 there passed through Sault Ste. Marie Canal not less than 21,234,664 tons of Canadian freight, valued at $200,000,000, while United States vessels moved over 168,000,000 tons through the same waters during the same period. The total traffic through "Soo" Canal for less than eight months is five times as great in the number of vessels and slightly less than twice as much in actual tonnage as passes through the Suez Canal during the entire year.

George W. Church Again in the Field.

George W. Church, at present located at No. 183 Greenwich Street, New York, is soliciting for agencies from manufacturers of tools and supplies, with a view to representing their lines. Mr. Church began business with his uncle, Peter A. Frasse, in 1865, at No. 95 Fulton Street, was the managing partner of the firm of Montgomery & Co., and subsequently of Church & Sleight until 1896, when he continued the latter business in his own name. Owing to answering the President's call for troops, he went out with the First New Jersey Regiment, of which he had been its quartermaster for the past eighteen years. His business deprived of its head, was closed out during his absence, hence his willingness to hear from manufacturers, that he may continue in the line which he has been prominently identified with for the past thirty-five years.

CURRENT COMMENTS OF OUR CONTEMPORARIES.

The Bicycling World in the following editorial comment, calls attention to a state of affairs usually existing but seldom referred to:

One source of complaint many retailers have against makers arises from the failure of the latter to keep in touch with them during the height of the selling season.

Both before and after this time the retailer is the recipient of an amount of attention that is sometimes even embarrassing. On the one occasion the maker has goods to sell, and on the other he earnestly desires to obtain the money for the goods sold. Hence his solicitude, which, in the opinion of the average dealer, should be spread more evenly over the entire year.

For four or five months preceding the opening of the selling season the maker covers the field thoroughly with his traveling men. No town is too small, no dealer too insignificant, to be visited. The overshadowing importance of obtaining a hearty endorsement of the new goods, and of maintaining unabated the loyalty of the agent, is everywhere recognized.

But when the season is in full swing, when the factories are taxed to supply the demands made upon them for fresh shipments, a speedy right-about face is effected. Why solicit orders when they are coming in as fast as they can be handled, why coddle dealers who are only too anxious to get goods on almost any terms? The ground has been well sowed, and it only remains to reap the harvest.

So the dealer feels that he is left to work out his own salvation. No more visits from travelers, who wax confidential in telling of the interest taken in the dealer's welfare; no more long, frank letters from headquarters explaining future plans and showing how important the dealer's part is in carrying them out. Instead, short, curt letters, frequently delayed and often lacking in definiteness when the subject of shipments is touched upon.

Of course, the factory has its side. There is an infinity of work to be done and scant time in which to do it. Many dealers are trying with their long-winded and rambling letters, frequently demanding impossibilities and asking for definite information when it is out of the question to give it. Everything is being done that is at all possible, so why take valuable time to explain this?

The Wheel, in a recent editorial, taking the interests of the traveling man under its protection, makes the following truthful and earnest reference to the man on the road:

Every manager of traveling salesmen should read that interesting and valuable book, "Put Yourself in His Place." It has been read by many men who would probably have become great without reading it, but who afterward admitted their indebtedness to the book. Our reason for commending it to managers of travelers particularly is that no class of workers is more deserving of, and less the recipient of, correct and sympathetic understanding. We know of many complaints of traveling salesmen against their superiors, in this respect.

There is nothing more trying to the patience of a man than to try to sell something to another man, and to bear in mind while doing so the necessity of seeing certain other men and writing home, and catching a certain train. We know of instances in which travelers are being overworked during the day, in the selling branch of their work alone. After the day's work is done begins the night work of making detailed reports, not only concerning their own agents in a town but concerning all other agents in the town. These men often go to bed tired to the last degree. Their evenings given up to work instead of relaxation, it is wonderful in many instances how they can endure getting up next morning and going through the same harrowing experience, keeping up this strain week after week, without breaking down.

When an earnest worker of this sort knows by the communications he receives from headquarters that his work is appreciated—its hardships as well as its accomplishments—he is a harder and more faithful worker for it. When, on the contrary, he is nagged about details, urged to move faster, and generally made to feel that he is serving a slave-driver, he may be excused if he feels the weight of his grindstone. It is not surprising, indeed, if now and then his caution string breaks and he tells his troubles to a customer, who tells it to the next traveler, who spreads it even though he may have troubles of his own.

Not only have our manufacturing facilities been increased in our usual and regular lines, but we have been augmenting industrial forces in an eminent degree and appealing to other countries beyond the seas for recognition and encouragement. This has made other branches of industrial development blossom with a new life and create conditions of prosperity even in the formerly untrodden paths of manufacture. Upon this feature of general improvement *Iron and Steel* dwells as follows:

One of the most hopeful signs of the times is the continued demand for shop supplies. Iron and steel plants are sharing with other industries the prosperity that is abroad. The impressive fact is that manufactories of almost all kinds are in process of erection. This is evidenced by the current business, which manufacturers of engines, boilers, belting, shafting and other shop supplies are enjoying. It may, in fact, be said that activity along these manufacturers is just now more pronounced than among the crude iron and steel makers.

Much of the demand for plant equipment comes from comparatively new sources. The tinplate industry was an example of what could be effected in a few years along untrodden paths of manufacture. The bicycle industry was another instance. And so to-day in the new work that is progressing there may be noticed elements of demand that are strong enough to show more than the ordinary degree of growth. One instance of this is municipal lighting plants, for which there are aspirations in many Western villages. Mining industries in the West are this Spring most vigorously pushing their conquest. Beet sugar plants are rapid risers in the world's fortunes. Cement works have taken a new lease upon growth, because of the more extensive application of that product, and are springing up in many localities. Chemical factories are spreading the refinements of nature's products with an unstinted lavishness. Paper mills are springing up like creatures of a day and give to power builders many orders. The automobile factory is out on the skirmish line of advancement. These are a few of the branches of industry where rapid growth is noted. Their active demands, directly or indirectly, contribute to the progress of iron and steel.

Power, machinery and tool builders are most directly the beneficiaries of these various activities, and the iron and steel thereby consumed makes a respectable tonnage. With demand for the crude product still crowding production to its utmost there is little opportunity at present for much expansion in the trade of the raw material. But the prospect for rapid growth in production is most promising, as soon as the present pressure is somewhat relieved. The foreign demand is the great enigma, but it has not abated in the least its attractive promises for increased trade. The possible extent of the overshadowing export movement is almost beyond calculation. At home, one of the richest fields for cultivation is steel trackage for wagon roadways. The outlook is no more unpromising than was that for steel cars three years ago. The farmers want better roads, country merchants want them, and the benefits to trade to be thus derived would be tremendous.

One of the iridescent dreams agitating the craniums of the political economist and his disciples in trade, has been the abolition of the middleman or "jobber," in the conditions surrounding the iron and steel production of last year, it was believed the opportunity in that special industry was reached, but now it seems in the opinion of *The Iron Trade Review* that the jobber proved to be a veritable friend in need, owing to the congestion of demands at the mills, thus adding greatly to his importance as a trade factor.

Digitized by Google

Much has been written in the past two years, as one line after another in the iron trade came upon conditions that seemed utterly revolutionary, about the passing of the middle man. The big consolidations followed one another so rapidly and promised so completely to change the old order, that jobbers were forced to the conclusion that their good offices would be largely dispensed with. The regulation announcement came with each new addition to the combine list, that large economies would be secured through concentrated management, through the abolition of selling agencies, the reduction of competitive selling forces and the handling of trade direct.

But the unexpected demand in all lines in 1899 made many changes in the program. On top of the difficulties experienced by small consumers in getting prompt attention from the large companies in the weeks that elapsed before order came out of the initial chaos, was the congestion of the mills that wore out the life of the buyer and seller all through the year. Producers simply withdrew their salesmen from the road in many instances and for months much of their correspondence was the stereotyped courtesy of letters regretting that orders could not be filled and that no date could be fixed when conditions were likely to be different. The jobber, with contracts made before the advance, and to a less extent at its various early stages, and with his well organized selling force reaching a great variety of smaller consuming interests, proved in many cases a veritable friend in need to buyers. The latter, paying less attention to the movement in progress, were caught unawares and undertook work for which at length it became practically impossible to obtain material. True, the jobber advanced his prices steadily, but there were cases in plenty in which the getting of the material, to save default on a contract, or to supply the small link needed for the completion of work that otherwise could not be marketed, was worth many times the advance paid This was the jobber's opportunity to demonstrate his value to the trade, and like a wise man he generally made the most of it. There were thus months in which many consumers knew practically no other source of supply than the jobbing houses. And if relations were not established in those months that will last for years, we shall have to admit an entire reversal of the ordinary laws of trade."

Since there are no products in iron and steel in which one concern has a monopoly—though there are two or three cases in which the bulk of production is in the hands of one company—the new importance of the jobber as a trade factor is evident. In addition to the customers of years antedating the consolidations he has established relations with some manufacturing interests whose dealings previous to last year had been almost exclusively with mills, on the materials making up the bulk of their requirements. He is thus able to place lump orders with the mills which the latter have been very willing to book in the quiet period following the height of last year's wonderful movement.

At the convention of the Hardware jobbers at Pittsburgh last year, it was evident from the addresses of the officers of various consolidations who were invited to speak, that the big companies recognize the value of the thousand-handed distributing agencies existing in the jobbing trade. Possibly the disposition of some of the strong jobbing interests to ally themselves with incipient competition in production, has had some effect in cultivating the sentiment. But events have been working in the jobber's interest, and to-day his position is more secure than at any time since the consolidation program was entered upon. What will develop when conditions change and hungry mills go after every order in sight, large and small, is another question.

How Shall We Treat the Erring Brother?

The credit man is often confronted with the question whether or not to extend new credit to a merchant who has failed in business, and has compromised his debts, or relieved himself of them through the operations of the bankruptcy law.

In dealing with this class of applicants for credit several questions present themselves for consideration. If the failure was premeditated or fraudulent, credit should, for all time, be refused, and it is a question whether goods ought to be sold to such a party even for cash, as such commercial pirates must, if possible, be kept out of business. Those who yield to the temptation of cash sales to do business with a dishonest buyer will find that such purchases will be used as an entering wedge to the credit man's confidence, for the ulterior purpose of abusing it again whenever it will pay to do so.

If, however, the failure was what is called an "honest" one (that is to say, if the debtor has made a clean and clear exhibit of his assets at the time of his failure, and has made such a settlement as under all circumstances may be regarded as a fair adjustment of his liabilities), it will then appear necessary to inquire "what were the causes that led to the failure?" One or the other of the following are usually found to have brought about the collapse: Either unfavorable conditions, such as failure of crops, unfair competition, an epidemic, local or national panic, and frequently poor location; or lack of ability and bad management.

Where the unfavorable conditions have superinduced the failure, and the credit man feels satisfied that this cause no longer exists, the extension of new credit may be properly considered in proportion to the margin that remains in the assets after settlement for the purpose of future business operations, and basis of credit, provided that the management has not been seriously at fault; but where the latter has been the *prime* cause of non-success it may be fairly assumed that the new venture will not be productive of better results than the old one, unless the party has profited by his experience, and starting out anew abandons the old rut and adopts better business methods.

The principal questions to consider are, therefore, first, Have the unfavorable conditions changed for the better? Second, Is the management likely to be a better one? Where either or both of these causes of the previous failure continue, it is natural to conclude that a second failure will follow the first, and the credit man will be wise to "stand from under."—Ernest Troy.

India Rubber Nails.

A German novelty that is being successfully introduced are india rubber nails of all shapes and sizes for use in work where ordinary nails are liable to corrosion, or where they may set up galvanic action, or for any one of a large number of purposes where metallic nails are objectionable. These india rubber nails, which are made by the Harburger Gummi-Kamm Co., near Hamburg, come in all shapes and sizes. The common form have either countersunk or cup heads, the stems being square and drawn to a point. In color they are a beautiful golden brown. They are very light, but notwithstanding their extreme brittleness can be driven with a hammer into soft woods in sizes up to one inch long without boring a hole for their reception. For sizes from one to two inches long, it is necessary to bore holes to start them or for the larger sizes, for their entire length.

For withstanding the action of acids and alkalies in commercial chemical processes, as in dye-houses, breweries, bleaching works, etc., they are excellent. Then, too, being non-conductors of electricity their uses for building accumulator cells and other electrical apparatus are many, the nails with perforated heads as shown being designed especially for electric work. It is is also suggested that they would be of particular value in attaching copper sheathing to vessels, owing to their non-galvanic action, the corroding power of which action has heretofore been one of the greatest difficulties in this work. It is asserted that they clinch fairly well. For use about explosives, where a spark from a nail head when struck by a hammer might prove fatal, they are particularly desirable.

"So that's General Fullgore, is it? If I remember rightly everybody used to call him Colonel."

"Yes, but that was before he gave the town a big barbecue at his own expense. He's General Fullgore now—*Ex.*

Learning to be a Manager.

Among a given lot of men up for examination, there will be found various kinds and degrees of talent. One will be skillful with his hands, as, for example, in mechanical employment or in penmanship; another will be quick at figures; another will be expert as a salesman; still another will succeed in trading. One will have high qualifications as a bookkeeper or accountant, and still others will be faith ful to any trust of a subordinate character reposed in them. The one kind of talent, however, that will be hard to obtain, and for which, accordingly, a high market price will be paid, is that of planning and direction, or what is commonly designated as executive ability. It is safe to say that there will be found one hundred persons able to do things under directions to one who is able to plan what to do and set himself or others at the doing of it.

To be able to wind one's self up and set one's self going is a talent in itself, and in the market conception of the case is worth much more than any other phase of individual talent. To be able not only to keep one's self advantageously employed, but to direct the labor of others, is still more valuable. Who is there among men in general more helpless than the individual out of employment, skillful to a degree in certain lines and yet for the time utterly unable to find anything useful to do? The tendency of the times is in the direction of division of labor and specialization. In offices, as in factories, men are trained to certain duties and are held to those duties, to the exclusion of everything else. When finally one of this class is thrown out of his regular line and is forced to depend upon his own resources, he is in a sense more helpless than a child. What then can be done to overcome this tendency and to render men in general better able to take care of themselves and to become self-reliant and equal to the common emergencies of life?

The fault in many cases is fundamentally that of temperament or habit. The boy looks forward to a certain line of employment as being that which will give him a livelihood, and with the feeling that when he has become skilful in his chosen vocation he will have done all that isa necessary to do. Right here some friend ought to correct his planning. Every employment sooner or later fails those who are dependent upon it. Conditions change, panics occur, the demand varies. A friendly tip to the young man, therefore, would be, "Learn your trade by all means, but remember that you cannot depend upon it under all conditions. While holding yourself to it as the principal object, do not shut your eyes to other things alongside of it; for example, to adaptations and to variations, an acquaintance with which may be of considerable importance to you, first or last."

But the advice should go further: "Do not for a moment suppose that you have done all that is required of you when you have done one thing, however thoroughly. Do not feel that when you have learned one trade that you have earned the right thereafter to shut your eyes to all responsibilities, save only its requirements, and devote your time to frivolities. Instead, keep on learning, keep on trying, and always have an alternative upon which you can depend in emergencies." It is all summed up in the advice, "think and study." While doing one thing learn to do something else by utilizing the time that would otherwise be wasted, for, as a fact, there is more recreation and more real enjoyment in study and in planning how to do than in all the frivolities and so-called pleasures of life.

In thus learning how to do more than one thing, the young man will learn in part how to put himself to work. In thus giving attention to something else besides the routine of his daily labor the young man will learn how to adapt himself to varying conditions, and this is one of the first lessons in management or executive work. With an idea in mind of what he would himself do, facing unusual and unexpected conditions, he is, in part at least, prepared to tell others what to do under like conditions, and so, step by step, he gets to the position of a director of work, instead of a doer of work. We can by no means exhaust the thought that is in mind in the brief space that can be devoted to such a subject. A volume would be necessary to do it full justice. At least one thought that is contained in these remarks, properly understood, will be of advantage to many of the younger readers of this magazine, and that is this: To learn to be a manager, both of self and others, should be the worthy ambition of all.—WALTON DAY *in Accountics.*

Foreign Patents.*

Good foreign patents are extremely valuable property, but it does not follow that all foreign patents are of value. Not one in a hundred of American inventions, even if they are somewhat profitable, are worth the cost and trouble of foreign patents. The cost of foreign patents is heavy, and in most cases the continued validity of the patents is contingent on the payment of taxes and the local working of the invention. If a customer is promptly found under the foreign patent, then its taxes and working offer few difficulties; but if no customer is found within a year it becomes a serious matter to perform the legal working. Little or no confidence should be placed in nominal or paper workings, and even these are expensive. In some countries taxes begin, and the invention must be worked at the end of the first year, and the working must not permanently cease; and in the case of Canada the continued validity of the patent restricts the power to import the invention into Canada. An invention which has made good profit in America and is a matter of foreign requirement, is well worth foreign patents, and the customer may often be found, in view of the American success. But the trouble is that the foreign patenting cannot be delayed until American success determines its expediency. In some foreign countries the patent would be rendered void by prior patenting or disclosure, and in America the patent expires with the term of the first expiring previously granted foreign patent. Hence, to avoid any antedating, all the patents should bear about even date. Date can be made for foreign patents by merely filing the applications, while in America the date of patent is the date of grant, and may be months, or even years, after the date of application. Hence the proper course is to take no steps regarding foreign patents till the United States application is allowed. Then select the proper future issue day for the United States patent, and cause all the foreign applications to be filed on that day. An exception is to be made in case the invention goes into public use before the issue of the United States patent. In such case the shortening of the life of the United States patent must be submitted to, and the foreign patents should be taken out before public disclosures would render them void.

In most foreign countries patents are granted as a matter of course, without examination into novelty, and the grant of the patent is no evidence whatever that the patent is good for anything. In Germany applications are examined, and generally rejected. The merit which will insure the grant of a German patent is not at all to be measured by American standards.

Briefly, then, waste no money on foreign patents unless prompt results are in sight, or unless the invention is of importance enough to justify the expense and trouble due to recurring taxes and legal local working of the invention; foreign patents should antedate invalidating disclosures of the invention; it is desirable that all patents on the same invention bear even date. This latter can be secured by filing the foreign patents in the interval between allowance and grant of the United States patent.

*From an address by James W. Lee, before the American Society of Mechanical Engineers.

HISTORY OF BELLS.

Bells are of peculiar interest to almost every one. Their voices to some tell only of daily duty, of trains to catch, of the return of hours of toil, of the ceaseless flight of time; and to others they speak of devotion, and to others still bells are instruments of heart stirring music. Recent years have seen the publication of not a few books upon the subject; the last newcomer is entitled "A Book About Bells," and is written by the Rev. George S. Tyack, and published in London by William Andrews & Co., from which we glean the following information regarding the history of bells:

There can be little question that the earliest musical instruments were those of percussion. There are frequent mention of bells in the Old Testament, and among Oriental nations bells, or at least tuned pieces of metal, occupy a large part of attention among native musicians, not only in the past, but even in the present time. This primitive and well-spread discovery of tones producible by blows on resonant substances being thus granted, it may readily be seen that something more or less resembling the modern bell in shape would almost certainly be a very early invention. The Book of Exodus gave probably the earliest mention of bells in its allusion to six golden ones which tinkled around the vestments of the Levitical High Priest. There is another reason for them in the words of the prophet Zachariah, who speaks of the harness of horses being adorned with them. Turning from sacred to profane literature, we find small bells spoken of by Euripides and by Aristophanes. Plutarch refers to them in his Life of Brutus and Virgil in his Georgics.

The researches of antiquarians have brought to light facts which indisputably prove the early use of bells. Bronze and iron bells were found by Layard in his excavations of Nimroud, and very ancient examples have been met with in various places in the far East; while turning to the far West we have instances of copper bells found in ancient Peruvian tombs. Curiously enough there appears to be no proof that bells were used at all in Egypt. There is no trustworthy evidence of the use of really large bells before the dawn of Christianity, and they owe their existence to Christian influences. The credit of the invention has been given to Paulinus, Bishop of Nola in Campania. Paulinus lived about 400 A. D., but it is claimed the distinction is doubtful, and a better title for it is made up for Pope Sabianus, who succeeded St. Gregory in the papal chair 604. In any case, from about that date notices of the use of bells, which must have been more or less of the kind and size now seen in turrets, become frequent. By the year 750 in England the church bell became sufficiently common for orders to be issued to have the priests to toll them at an appointed hour. Literature, and especially poetry, illustrate in a striking way the place which bells have for ages filled in the lives of men.

The earliest bells were probably not cast, but were made of metal plates riveted together. One set, which belonged to St. Gall, A. D. 650, is still preserved at St. Gall, Switzerland, and another one, traditionally associated with St. Patrick, is shown at Belfast. These are made of iron, and are only about six inches high.

Other early examples may also be cited. Bells of this kind are not round, but wedge-shaped, being broad and square at the mouth and rising to a ridge at the top. The names of no very early bell founders have come down to us, and probably the bell founder's art, like others which were exercised chiefly for the furnishing and adornment of the church, was originally practiced almost exclusively by the ecclesiastics themselves. As churches and monastic houses increased in number, naturally the art of bell-founding drifted into the hands of a professional class and scattered records of some of its members have come down to our time. The chief centers of the art in England were at York, Gloucester, London and Nottingham. It is probable that many of the early bell founders had no fixed place for working, but traveled through the country, rearing temporary foundries at various convenient places, and casting there such bells as might be wanted throughout the neighboring districts. In many cases it is certain that the bell founder did not devote himself exclusively to that work, but combined with it some other more or less analogous trade. Often the itinerant bell founders cast their bells directly at or in the churches, for doubtless the conditions of the country in early times made the transport of heavy masses of metal a matter of no little difficulty, so that the founders were glad to work as near as possible to the towers to which the bells were to be raised. In 1483 the importation of foreign bells into England was made illegal, a fact which would imply that the bells at that time were brought into the country in sufficient numbers to affect the home industry. On the continent Louvain was the seat of a famous bell foundry. Deventer, Holland, was another center of the industry. The French bells were made of iron, while brass was commonly employed in Italy and England, and a foundry in Bohemia has recently turned out bells of steel, but the experiment can only be called fairly satisfactory at best. A church in Scotland has a bell of this metal cast in 1895 by the Vickers, of Sheffield, who have also cast steel bells for a church in Hastings and other places. Glass has been employed for bells of fair size, but the tones of such bells are sweet but not far-reaching. Even wood has been used as a material in bell manufacturing, but the wooden bells which have been found may possibly have only served as patterns for the maker of the bell frame or for some such purpose.

Bell metal consists of a compound of copper and tin, usually three parts of copper to one of tin in small bells, and four parts of copper to one of tin in large bells. If the amount of tin be increased the bell becomes more brittle, but if the copper be in excess the brilliancy of its tone is damaged. Sometimes small quantities of zinc and iron are added. It is a popular superstition that a bell of specially sweet tone owes its excellence to the presence of a quantity of silver in its composition, but it is asserted by experts that the employment of silver would have precisely the contrary effect on the tone of the bell to that which tradition assigns to it, silver being in its nature too closely allied to lead to permit of use in this case. No less important to the voice of a bell and its material is its shape. Mediaeval bells were for the most part longer and narrower than those of more modern make. In practice it is found if the bell be too flat the vibrations expel the air from within with an almost explosive force and the sound is loud and harsh. If, however, the opposite error be committed and the height be too great in proportion to the diameter, the air reverberates too much within the bell itself and the sound does not travel satisfactorily.

In casting a church bell the first important work is the construction of the core, which usually consists of a hollow cone of brick erected on a cast iron plate as a foundation, and in diameter somewhat smaller than the interior of the

Digitized by Google

bell. Over this is plastered a specially prepared mixture of clay, intended to bring up the core to the exact size and shape of this interior. The core is baked dry and hard by means of a fire within it. Over this is built up what is called a "thickness," by which name founders call a second layer of clay of exactly the thickness, shape, and size of the proposed bell. This gives the correct figure of the outside of the bell. This is then dusted over with dry tan, and upon this is constructed the "cope," or outer casing of clay several inches thick. After the cope has become thoroughly dry by means of fire, it is raised with the help of a crane, and the clay which formed the "thickness" is destroyed. The cope is then lowered into its former position, care being taken to make it concentric with the core, then the mold is ready to cast. Where quantities of bells are produced the "thickness" is done away with and a cast iron cope case is substituted. Every part of the bell has a technical name. The hooks for fastening the bell to the wooden stock, which forms the axle on which it revolves in the belfry, are called the "cannons."

The loop from which to suspend the clapper has also to be cast. In many modern bells the cannons are dispensed with and the bell is bolted directly on to its stock. This has the advantage of enabling the bell to be turned. The clapper is technically divided into ball or hammer, and the flight or shaft, which is fastened directly into the crown of the bell by an iron staple.

Most ancient and many modern bells bear some motto or device, to which the modern makers add the date and the name of the firm. These, of course must be impressed in the cope before casting.

In ancient days when the art of bell casting was still retained in the hands of the ecclesiastics, the furnace and the castings were blessed, which must have been a picturesque scene. It usually takes seven or eight hours to heat the metal, and it does not take as many minutes to run it into the cope, even where the bell is a large one. Then follows a time of keen anxiety in the foundry, especially if the work be one of unusual size and importance. Six days are usually allowed to elapse before the metal is touched. The bell is then put in a temporary frame to undergo the ordeal of testing the tone. It is then carefully finished and tuned. If the notes struck out be too flat a portion of the edge of the bell is cut away, thus reducing the diameter. If it be too sharp, the thickness of the sound-bow is reduced. Nowadays the bell is turned in a specially designed lathe, the bell being secured to the face plate, and the requisite amount of metal can be cut away with the greatest accuracy. Where the bell is to form a part of a chime, it must be tuned so as to accord with the others. The reception and erection of a large bell is frequently the cause of great ceremonies and rejoicing, especially where the bell is for a church.

Many of the bells have decorations and inscriptions on them which are very curious. Of this kind was the legend of "Mighty Tom," of Oxford, before its recasting in 1612. The translation of the Latin inscription would be:

"For Thomas' sake
I cry Bim Bom, and no mistake."

Sometimes where there was a chime each bell had a separate legend. A good deal of the poetry is really doggerel, as:

"On Sabbath all
To church I call."

Another one:

"The sleepy head I raise from bed."

Inscriptions were found on some of the seventeenth century bells. Among them one in Addington, 1658:

"When you hear this mournful sound
Prepare yourself for underground."

The following lines are met with in a great many places in the different countries:

"I to the church the living call
And to the grave do summon all."

All the bells do not have such lugubrious inscriptions. Sometimes the inscriptions refer to a wedding.

"When men in Hymen's bond unite
Our merry peals produce delight."

At times it is used for secular purposes, resulting in the appropriate inscriptions, as:

"Lord quench this furious flame,
Arise, run, help put out the same."

The church of St. Ives has a bell which has the following terse inscription:

"Arise and go about your business."

In addition to the various mottoes, etc., to which we have referred, in many cases we find on the bells the record of ecclesiastical rulers of the parish at the time of their casting which have been of great value to the historian. At Clapham, Bedfordshire, there is a bell in which one word of the inscription is upside down. It reads "God Save the Church," and the word "church" is upside down.

Types and Printing.

The first American power press was invented in 1822 by Treadwell. Printing in raised characters for the blind was invented in 1827. The London Booksellers' Association, a monopoly, was formed 1829. The Washington press was invented in 1829 by Samuel Rust. In 1830, 852 papers, 50 daily, were published in this country. In 1830 a sheet 13,800 feet long, 4 feet wide, was made in England. The Adams press was invented by Samuel Adams, Boston, 1830. Cloth bindings superseded boards and vellum about 1831. In 1836 Baxter patented a process of picture printing by different blocks. In 1839, 2,032 volumes of new books were printed in London. Rubber backs to very heavy volumes were introduced in 1841. Anastatic printing, transference to zinc plates, was invented by Baldermus, 1841. The first illustrated paper was the London *Illustrated News*, 1842. A type-setting machine was invented by James Young in 1842. The rotary press was invented by Hoe, of New York, in 1847. In 1848, during the French Revolution, 400 new papers sprung into existence in Paris. In 1843, 1,631 journals were published in the United States. The papier mache process was first used in France, 1848, for books. In 1850, 2,526 papers were published in the United States. Printing types were first electrofaced with copper about 1850. Color printing by machinery was first done by Leighton in 1851. Stereotyping was used for printing the London *Times* in 1856 Engraved copper plates were first electrofaced with iron about 1855. Hoe's American press was introduced into London in 1858, 25,000 an hour. In 1860, 4,051 journals were published in the United States. In 1860 the American papers printed 928,000,000 copies. In 1861 the papier-mache process was used in New York for dailies. In 1862 vulcanized rubber was employed for printing by John Leighton. The Walter press was invented for the London *Times* in 1862—17,000 an hour. In 1868 Marinoni's press at Paris printed 36,000 an hour. In 1870 there were 669 paper factories in the United States. In 1876 Meyerstein patented a process of printing many colors at one impression. The Ingram web-rotary press, for illustrated papers, was put in use in 1877. The Clowes type-setting machine, electric, was exhibited in London in 1877. In 1880, 4,393 new works and 1,475 reprints were issued in England. In 1880 there were 980 daily, 8,718 weekly and 1,075 other papers in this country. The aggregate copies of American papers issued in 1880 were 2,077,659,675. The daily newspapers began the use of illustrations about 1884.—*The Country Editor.*

She—Why don't you do something to win wealth and glory?

He—I would, but I'm afraid if I go to Cape Nome I'll freeze to death, and if I go to the Philippines I'll get shot.—*Ex.*

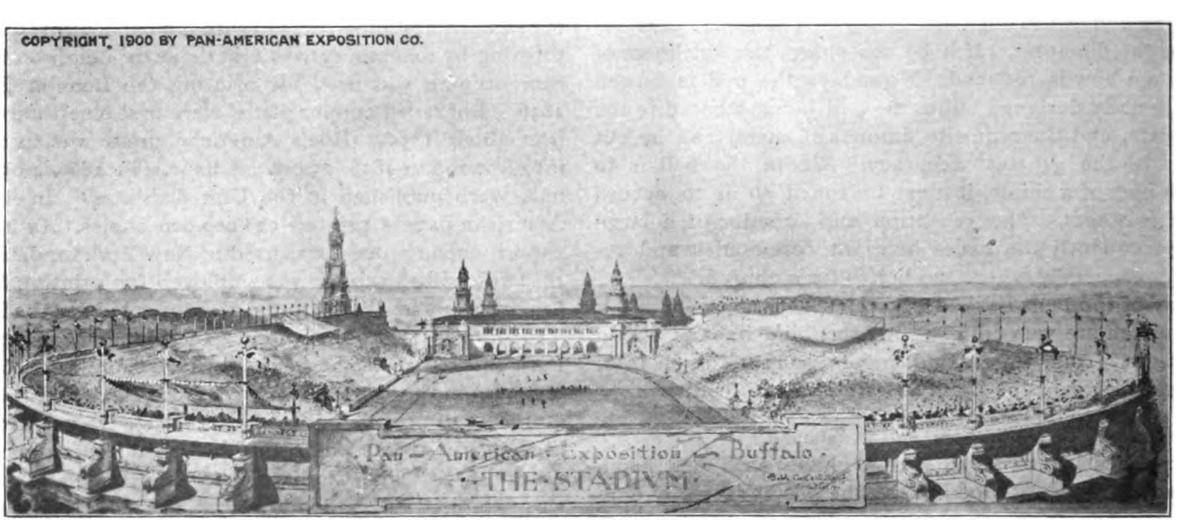
THE PAN AMERICAN EXPOSITION, 1901.

THE GOVERNMENT BUILDING.

FEDERAL OFFICIALS MAKING EXTENSIVE PLANS FOR THE PAN-AMERICAN EXPOSITION.

So vast is the number of valuable and interesting objects for exhibition in the possession of the United States Government that none but a building of great proportions could possibly contain them. Instead of one building, however, at the Pan-American Exposition in Buffalo, N.Y., in 1901, the Federal group will consist of three massive structures connected by colonnades. The main building of this splendid architectural trinity will be 130 feet wide and 600 feet long. The others will each be 150 feet square.



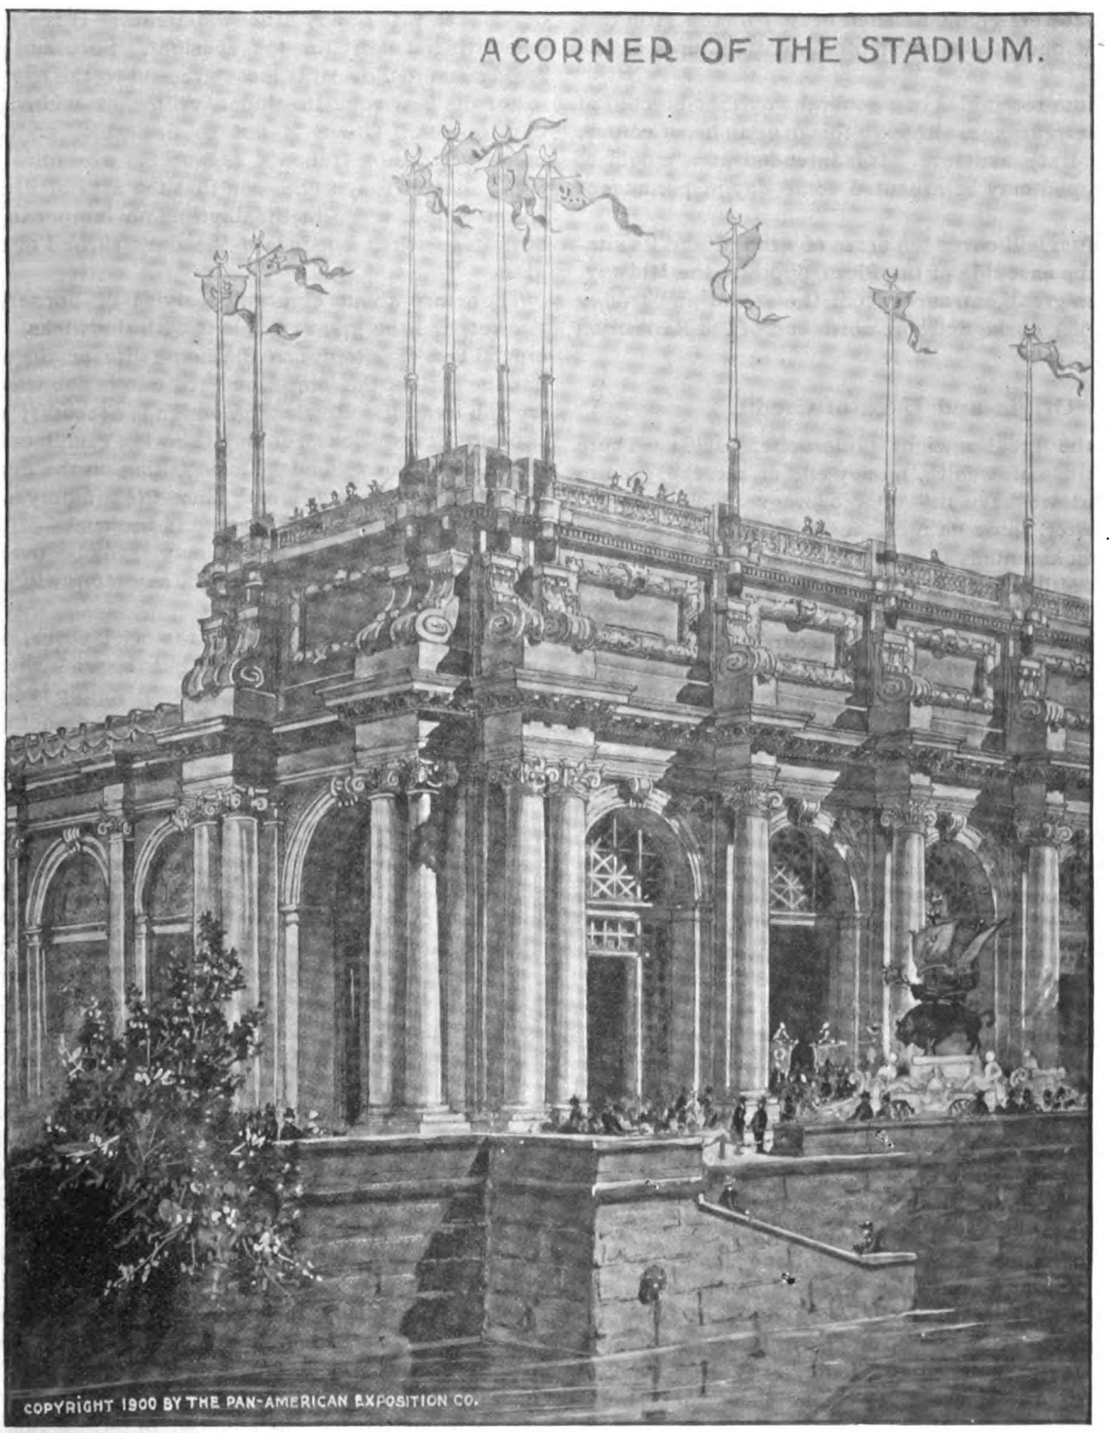
The government work is under the direction of James Knox Taylor, Supervising Architect of the Treasury Department. The group will be treated architecturally in a modified Spanish Renaissance, the details suggesting a Mexican rather than a strictly Spanish origin. Like the others, these buildings will be constructed of staff, already made familiar to the public by its use at the Chicago and more recent Omaha Exposition. The color scheme, in marked contrast to that used at Chicago, will be rich and brilliant, the lavish use of color and gilding giving, with the intricate plastic decorations and sculpture groups, an ensemble both striking and interesting. Portions of the roofs, covered with red Spanish tiles, will add much to the character of the buildings as a whole.

In plan the buildings are shaped like a letter U, the opening being toward the west. The main building corresponds to the bottom of the U, which will accommodate the greater portion of the Government exhibits, the administrative offices, guard room, etc. Its center will be surmounted by a dome, the apex of which, 250 feet above the main floor level and crowned with a figure of Victory 20 feet in height, will form one of the most conspicuous features of the Exposition grounds. Connected by colonnades to the main building are the two lesser buildings or pavilions, one of which is intended to hold an exhibition typical of life and labor in the Government's new possessions; while the other will contain a branch station of the United States Weather Bureau, and the exhibit, aquariums, etc., of the United States Fish Commission.

Inlets from the lagoon fill the spaces within the colonnades connecting the pavilions with the main building. The central plaza, the space enclosed by the arms of the

UNITED STATES GOVERNMENT BUILDING PAN-AMERICAN EXPOSITION.

THE STADIUM PAN-AMERICAN EXPOSITION.



Digitized by Google

U, is decorated by steps, terraces and formal flower beds, making an easy and beautiful approach to the main entrance under the dome.

THE STADIUM.

The completed Stadium for the Pan-American Exposition at Buffalo next year will offer to the lovers of sports the most spacious and splendid arena ever erected in America. The Athletic Carnival to be held during the great Exposition will be the most notable in the history of American sport. The co-operation of many of the best promoters of athletic games and contests has been secured. Visitors to the Pan-American Exposition may therefore expect to witness the meeting of the most famous athletes of the world, in competition for prizes worthy of their best feats of endurance, strength and skill.

It is said that the great Colosseum at Rome, built in the first century of the Christian Era, could accommodate 87,000 spectators. The Pan-American Stadium will be 129 feet longer and but ten feet narrower than the historic amphitheatre of Rome. The Stadium, however, will have a larger arena, and the seating capacity is estimated for 25,000 people. The top row of seats will be sixty feet above the ground, and every seat will command a perfect view of the vast interior. Standards are to be placed at various points for the support of awnings in such a way that they will not obstruct the view from the other seats.

A CORNER OF THE STADIUM PAN-AMERICAN EXPOSITION.

The Stadium will have a quarter-mile track and a sufficiently large space inside of this for any of the athletic games. Great attention has been paid to having a large number of aisles to reach the seats, and, in addition to the principal entrance on the west, there are provided seven large exits. These exits are made of sufficient breadth and height to admit, in case of need, the largest vehicles or floats, as it is proposed to use the Stadium for certain pageants, exhibits of automobiles in operation, judging of live stock, horses, agricultural machinery, road machinery,

Digitized by Google

etc. No exhibitor has ever had such a splendid arena in which such exhibits could be displayed. The space under the seats is to be used for exhibition purposes, and is in itself the equivalent of a very large building.

A large and picturesque building forms the main entrance to the Stadium. This is 241 feet long by 52 feet wide, with towers 164 feet high. The style is in conformity with that of the other buildings, with an arcaded effect in the lower story, red tiled roof, broad eaves and bright colors. The old Spanish towers give a finished beauty to the structure and make it one of the most prominent features of the Exposition.

The Stadium resembles in a general way that erected at Athens a few years ago, although this one can be, of course, only a temporary structure. It is intended as a model of what it is hoped may be executed some day in permanent form.

The Stadium will cover ten acres of ground and its situation is on the east side of the Plaza, opposite the Midway. It is near the great entrances from the steam and trolley railway station, at the extreme north end of the Exposition grounds.

Origin and Uses of Credit.

One of the great ancient philosophers said: "There being two kinds of wealth, money and credit, the greater is credit, and we have it." Our own great philosopher, Daniel Webster, said: "Credit has done more a thousand times to enrich nations than all the mines of the world." John Stuart Mill said: "Everything is wealth which has purchasing power—labor and credit are wealth. Credit is the greatest wealth to everyone who carries on commerce, for credit, though it is not productive power, is purchasing power." Benjamin Franklin said: "Credit is money." Withal credit merely transfers to the debtor the property of the creditor, and one is plus in business as much as the other is minus. Without credit the business of the world would come to a standstill. The Government becomes involved in war, or undertakes some great public work, such as making waterways, constructing breakwaters or lighthouses. It must use its credit and borrow the money from those who have it to lend. By credit we buy railways and canals. We open mines, and organize banks and trust companies by selling shares, etc. It is said that the Romans were the creators of the credit system in all its branches. When the practice of writing became general at Rome, a very strict custom of law grew up. It was decreed that the head of every household should keep a great family ledger, as strict and exact as that of a great modern banking house. In this every incident of his life was recorded; in this he was obliged to enter all sums of money borrowed and lent; all trade profits and losses; all his revenues, his taxes and expenses of every description. It was from these family ledgers that the whole of the modern system of bookkeeping and credit has been adopted. They also organized the banking system, checks and bills of exchange. MacLeod says: "The theory of credit is now absolutely complete. It has required a period of 2238 years, from the year 350 B C. to 1888 A. D. to bring the theory of credit to absolute perfection."—John Field.

About Lamps.

That lamps have of late steadily grown in popularity, says *Harper's Bazar*, is a sign of our growing national instinct for beauty. The flicker of gas and the hard, uncompromising glare of the electric light have alike proved trying to many whose sense of tone values in light is too fine to be satisfied with crudities. The warm, subdued tone of the shaded lamp easily places it in advance of all rivals, while even in daytime a handsome lamp is as distinctly an ornament to a room as any article of bric-a-brac.

The great bugbears about lamps are the chimneys and the wicks; on these and on the kerosene odor depend the objections. All of these may be readily overcome. A perfect chimney for any lamp should be as large in diameter as the brackets of the burner will permit; it should be as high as convenient, and not too narrow toward the top. Lamps are by no means an expensive luxury, unless one has a very costly or antique relic to begin with; but the cost of maintaining a lamp in daily use is not more than one-eighth that of any other illuminant. It is also the only true artificial light for the eyesight. Soft and untiring, steady and mellow, it is most grateful to the eyes.

For the best color in globes, yellow or white gives the best results. Green is not so desirable, and although much affected by students and others who burn the midnight oil, it is easy to be seen that the area of illumination is contracted, while in the daytime no lamp can show to advantage when hooded in the dark shroud of the green glass.

There are about eighty-five styles of burners on the market, and the great trouble is with the wicks. This is a crucial test of patience to the housewife or the maid who has the care of the lamps, and truly it is one which would try Job himself. Rewicking, which is necessary so often; the care of the wicks, rubbing the wick each morning; the charred portion which insists on falling on the burner with the intelligence of original sin; the gummy substance which forms on the tubing around the wick—all these are exasperating trials. All these may easily be overcome by a few simple rules, so that almost any lamp will give satisfaction.

First, be careful to see that the wick-space, or tube, is perfectly straight and even, so that the wick will not bind anywhere. Next see that the draught supply is perfect and adequate to support a large flame. Also, do not neglect to have the reservoir at least two-thirds full of oil. Lamps are many times blamed for giving a poor light when the whole fault lies with the maid, who did not feed the lamp enough food to support its life. Last and well nigh most important of all, see that you have the proper wick. It should not fit the space too tightly, should not be woven too compactly, and should be made of a material as nearly non-combustible as is practical.

Lamps, from a sanitary viewpoint, are not nearly so objectionable as is supposed, and are, as a matter of fact, not so injurious as gas. The latter is detrimental to plant life, whereas lamps are not. Florists know this well, and gas is not found in the hothouses and greenhouses whence come the floral beauties of New York's market; they use kerosene lamps altogether.

Lastly, the housewife who really understands the care of her lamps will give the reservoir a thorough cleaning once a month, and if the wick has become clogged with the waste matter it has drawn up she will replace it with a new one.

Properly handled, nothing will give so much real pleasure and such a sense of harmony as the lamp, while for decorative purposes nothing can compare with it.

Money never should be inclosed in letters for transmission through the mails. Money orders are cheap, and money in a letter offers a constant temptation to those who handle mail. It is practically impossible to place money in a letter so that the postal clerk into whose hands the letter falls will not instantly detect it. Paper money has a peculiar odor unlike anything else on earth, and the clerk who is dishonest uses his sense of smell in spotting valuable letters rather than the sense of touch.—*San Francisco Argonaut.*

The robin's Spring gladness, I take it, is that
He escaped being stuffed for some last Winter's hat.

THE PARIS EXPOSITION.

BITS OF INFORMATION CONCERNING THE GREAT SHOW AT PARIS.

April 15, 1900, is the date of the opening of the Paris Exposition. The doors close November 5, 1900.

The Exposition covers virtually the same space as did the one of 1889, though there are 270 instead of 240 acres.

The funds for expenses are derived from five sources. The Government appropriates $4,000,000, the city of Paris $4,000,000, the Bank of France $6,000,000, the sale of bonds by popular subscription $13,000,000, sale of concessions and privileges and of building and other material, after the exposition is over, $1,000,000—in all a total of $28,000,000.

CHARLES RICHARDS DODGE, DIRECTOR OF AGRICULTURE.

ROBERT J. THOMPSON, SEC. LAFAYETTE MEMORIAL COMMISS'N.

Holders of bonds have the privilege of participating in twenty-nine lottery drawings for 4313 prizes, aggregating $1,200,000.

Three of the structures will be permanent—two palaces of art and the great bridge of Alexander III.

The admission will be two francs before 10 A. M., one franc between 10 A. M. and 6 P. M., and two francs after 6 P. M.

It is estimated that 40,000,000 visitors will go to Paris. Over 32,000,000 visitors were at the last exposition. By a most ingenious contrivance, in the utilization of space, 58 turnstile entrances have been provided, each officered by ticket-takers, and aggregating a capacity of 60,000 admissions in an hour.

There are imposing entrances to the Exposition grounds, which are replicas of the most famous gateways of the world. The Holy gate of the Kremlin, the Sun gate of Toledo, the Victory gate of Cairo, the Roman gate of Treves, the gate of Delhi, the historic tower of Nesle, the gate of St. Paul of Basle, and the St. James's gate of London.

The catalogue of the exhibition will cost $90,000 to print. It contains historical records of all arts, crafts and industries.

Fifty-five nations have been asked to take part in the Exposition. It is one of the rules of the exposition that no country can have a separate building unless the executive or ruler of that country announces his intention of visiting the Exposition.

Cameras may be taken into the grounds at a cost of ten cents each. If, however, anyone wishes to photograph works of art a special permit will be necessary.

One of the most beautiful features of the water palace, which has a frontage of 200 feet and more, will have in the centre a vast number of cascades and waterfalls, fed by over 500,000 gallons of water every hour. The principal waterfall will be thirty feet wide and over one hundred feet high, and from the midst of it will rise a colossal sculptured allegorical group representing "Humanity Guided by Progress, Advancing Toward the Future."

Electrical science will have for its use the largest of the special palaces; this building is 1275 feet long and 250 wide and will be the source of all the vast electric energy used upon the grounds. It is made of glass, and at night will look like a gigantic beacon of light.

The summit of the Eiffel tower—one of the reminders of the last exposition—has been linked with the distant tower of the Trocadero by means of an endless cable bridge. One can journey by means of a sedan chair from one end of the grounds to the other, and thus have a superb bird's eye view of the grounds. The Eiffel tower is being painted yellow; at the bottom deep orange, and gold at top; 8000 electric lights will bring out a striking effect at night.

Another enterprise is a gigantic pivoted tower. In telescope fashion it comes to the ground to receive passengers, then gradually extends itself to its full height, and after remaining stationary for a few minutes, swings around like a huge crane, and collapsing again, deposits its human load on the opposite side of the grounds.

There will be a topsy-turvy hotel in which everything will be upside down, and the visitor will wonder if the law of gravitation has been repealed. One will be firmly persuaded that he himself is walking, hanging head downward from the ceiling. All the rooms, from the roof gar-

Digitized by Google

den at the entrance to kitchen at the top, will be sumptuously furnished. In the drawing room the chandelier rises from the floor, in the bedrooms the real ceiling is carpeted and the bed appears pendant from the ceiling; the bathtubs have water spouting upward. On looking through the windows out upon the grounds they, too, appear reversed. Springs, wires and mirrors are the secrets of all this wonderful illusion.

The world's largest music-box, made by an Italian who has spent fifteen years in its construction, will be given space. Its proper name is an autoelectropolyphone. This monster music-box plays every kind of concert music in the most finished manner. In it are concealed 80,000 pieces of musical apparatus, which alone required an outlay of $12,000.

The biggest wine tun in the world has been built for the show; it holds 88,000 gallons, or more than twice as much as the famous Heidelberg tun. It is 14 metres high, and its cost is $30,000 One hundred persons have been entertained at dinner in it. The tun was divided into two floors; the upper one, reached by a flight of twenty steps, was used for the banquet hall, and was gaily decorated. It was like the banquet hall of an old castle. The tun was made in Nancy.

The biggest room in the world will be a feature of the show—or one having the greatest single floor space—12,544 metres. In this amphitheatre 15,000 spectators can be seated.

A mammoth telescope, which has been made at a cost of $300,000, will bring the moon within a mile of the earth. It magnifies 10,000 times. The highest power now known is 4,000 times. Nearby will be a clock weighing 200 tons.

A mock volcano, or miniature Vesuvius, with real flames and real lava, will have restaurants, cafes, railways, shrubs and rocks on the outside, and within living pictures of scenes from Dante's purgatory and paradise.

The Emperor William sends the Frederick the Great collection of curios, literary treasures and French paintings.

The Prince of Wales is the commissioner-general for England and her colonies He is the only foreign royal personage who has identified himself personally with the Exposition. He has visited Paris several times for the purpose of viewing the erection of Great Britain's buildings, for which $500,000 is appropriated.

Brazil sends a collection of 500 serpents.

With one exception the United States has the largest amount of space—about 300,000 square feet—partly in the heart of the Exposition grounds and partly in the annex in the Bois de Vincennes. There will be five buildings in the main grounds and two at Vincennes. One national pavilion will be the only expensive building we will construct. This will be on the bank of the Seine, alongside the structures of about thirty other nations, with Austria on one side and Turkey on the other. In general this building bears a remote resemblance to Grant's tomb. In the porch, which opens on the Seine, there will be an equestrian statue of Washington, surrounded by a quadriga, representiag the Goddess of Liberty in the car of Progress. The main hall of the building will contain reception rooms for the different States.

At the Paris Exposition of 1878 the United States was represented by 1,125 exhibitors; in 1889 by 2,000; in 1900 probably from 3,000 to 5,000 will exhibit their products. The largest amount of money appropriated by any State is $130,000 by California. American money will back most of the mechanical devices. The revolving tower, which gives a view of the country for miles around and which takes an hour to revolve, is being built by Americans. The real coal mine is an American enterprise. This will be underground and show the workings in realistic fashion. A great machine for making clouds of all varieties will be another Yankee invention.

A line of steamers carrying the American flag will run from the landing place on the Seine, near the American buildings, to Charenton, a distance of seven miles, and a model American street railway will run from Charenton to Brussels, in order that passengers may travel by either water or rail on American lines.

Citizens of Philadelphia will present to the city of Paris a statue of Benjamin Franklin during exhibition year, in return for Bartholdi's Statue of Liberty. It is intended to place the statue at Passy, where Franklin resided when Minister of France. The statue will be a replica of the one in Philadelphia.

Sousa's band has been appointed as the official American band to play at the exposition.

A woman's commission has been appointed to take charge of the exhibits forwarded by women of this country. There is no woman's building, but exhibits will be placed where they properly belong and judged wholly on their merits. This is supposed to be a delicate compliment to women to place their work on an equality with men's.

The president of the women's commission is Mrs. Ledyard Stevens. Mrs. Clarence Burns is a commissioner from New York. Mrs. Potter Palmer is one of the representatives from Illinois. Pennsylvania has appointed nine women commissioners. Miss Tarquina L. Voss, cousin of General Gowdy, consul-general to France, is an Indiana representative. Her apartment in Paris will be the headquarters for the visiting Daughters of the Revolution. American club women intend to hold a national congress in June. Miss Cecilia Beaux is the only woman artist on the jury of painters for the selection of paintings to be sent to Paris.—*New York Evening Sun.*

Modern Monopoly.

The characteristic fact of the modern trust is monopoly, says *Harper's Weekly*, but no trust has a complete monopoly. The common man speaks of "trusts," or "monopolies" as if they were synonymous terms; every trust manager with equal sincerity speaks of his competitors, and denies that he has any monopoly. What is the truth? A government monopoly like the post office, or telegraph and telephone services in many European countries, or like the salt or tobacco monopolies of the governments that control those articles for revenue purposes, is not considered a trust in the modern meaning of the word. Likewise the legal monopolies of copyright and patents are usually not regarded with disfavor, nor called trusts, unless, as in the case of some great public convenience like the telephone, it is believed that enormous profits are used to secure legislation contrary to the public weal. But in all these cases there is no dispute regarding the fact or the nature of the monopoly. The modern trust is not a monopoly in the sense that it controls the market completely, as can the holder of a patent; but, on the other hand, all modern trusts are organized for the sake of securing a monopolistic advantage. To say that they are not monopolies because anyone is free to enter the business is to limit the discussion to legal monopoly. So long as no rival dare enter the field in an effective way, and so long as the trust, in fact, does regulate production and competition, and does fix prices with little reference to acts of existing competitors, even though it be restrained somewhat by potential competition, monopoly exists, though it may be only partial. It is to secure this monopolistic advantage that trusts are formed.

The largest library in the world is that of Paris. It contains upward of 2,000,000 printed books and 160,000 manuscripts The British Museum contains about 1,500,000 volumes, and the Imperial Library at St. Petersburg about the same number. These are the largest libraries in the world.—*Exchange.*

RECENT TRADE PUBLICATIONS.

The Cary Mfg. Co., Nos. 19 21 Roosevelt street, New York. 1900 catalogue of box straps, fasteners, clasps, etc., forming the important specialties manufactured by this company. Included in its contents are full descriptions of Cary's patent Universal strap, galvanized strap, flat wire box strap, braided wire and split wire box straps, straight and twisted prong box fasteners, wire prong box fasteners, etc. Included in the assortment are such similar goods as Cary's bung fastener, pipe fastener, skeleton clasp, split wire clasp, protective seal and package protector, fruit crate and packing box corner, together with Cary's patent hinge and hasp for fruit crates, boxes, etc., that are now advertised in our columns. These goods are becoming more and more widely known with every season, and the company occupying a new seven-story building, with floor space of 35,000 square feet, equipped with a most modern steam plant, Otis elevator and special machinery, have every facility and requisite for the economical manufacture of these lines of goods, very little advance in the prices of which have taken place since January 1, 1899, notwithstanding there has been an advance of over 100 per cent. in the price of band iron. The catalogue is a very complete one in every respect, covering this line of goods, handsomely gotten up, and deserves consideration by all dealers in Hardware.

Berger Bros. Co., Nos. 231–237 Arch Street, Philadelphia, Pa. Pamphlet catalogue of 116 pages, covering the extensive line of specialties manufactured by this well-known house, covering articles under the head of tinners' and roofers' supplies, eave gutter and pipe, gutter and pipe hangers, pipe hooks and fasteners, steel roofing and siding, etc. They are large manufacturers of galvanized and copper cornice work, malleable and gray iron castings, and all of the goods above mentioned are fully described and illustrated in the catalogue before us. It shows in all the details the different specialties and their peculiar qualifications, making it a very valuable addition to the Hardwareman's library. In connection with this, they furnish the trade with a smaller pocket catalogue of an equal number of pages, which has been reduced by photo-engraving to less than half the size of the larger one, at the same time covering in all its details the contents of the larger catalogue, which is evidently distributed to the wholesale trade and other large buyers.

A. V. Taylor & Co., manufacturing enamelers, No. 1062 Central Avenue, Cincinnati, Ohio. Catalogue just issued by them, covering their line of enameled white letters for window signs as well as the enameled iron signs of various descriptions that are now being used for a number of purposes. They are large manufacturers of these goods, and, judging from the contents of their catalogue, they show a vast variety of styles sufficient to encourage the Hardware trade to add this salable line of goods to their other departments, especially in the way of house numbers, which can be handled economically and without an unnecessarily large stock.

The Boston Belting Co., No. 256 Devonshire street, Boston, Mass. A very handsome and attractive booklet of 16 pages, envelope size, with a sensational cover headed "Do You Know" with a large interrogation mark beneath. The contents have reference to the products of this old and esteemed company, the business of which has been established since 1828. The factories are recognized as being the largest and best equipped in the world, devoted exclusively to the manufacture of mechanical rubber goods. The contents of the catalogue give in detail all the goods that form the unusually large product of these works. It is not their general catalogue, but is intended only as a reminder of the fact that all these improved goods are manufactured by them, coupled with the sentence at the bottom of every page: "When It's Anything About Rubber—Ask Us."

The Iowa Farming Tool Co., Fort Madison, Iowa, have recently distributed throughout the trade several extremely handsome leaflets of four and six pages each, calling attention to special lines of tools. Those before us exploit the merits of "Sugar beet tools," "Mortar and street-cleaning hoes," "Profitable specialties, hoes," and "Fine stable goods for fine horses," calling special attention to their improved tools under the above heads. These leaflets are printed in extremely attractive style, always in two colors, illustrated from fine half tones, and the care taken in their preparation would necessarily impress the receiver with the desirability of reading what is placed before them in this attractive style. To this extent they are undoubtedly good advertising.

The International Sprinkler Co., Philadelphia, Pa. This company, which succeeds the Universal Automatic Fire Extinguisher Co., Ltd., have just issued a pamphlet of 26 pages, embracing in its contents the advantages of adopting the system originated by this company in the building and construction of all important edifices. This is a matter of considerable importance, for, being approved by the insurance companies, lower rates are obtained by those using its many advantages. A number of testimonials in fac-simile from the Board of Fire Underwriters and others complete the contents of this volume and give interesting reading.

W. C. Heller & Co., Montclair, N. J. Pamphlet catalogue of 16-pages, printed on good paper, and well illustrated, describing in detail the steel Hardware Shelf Boxes, up-to-date sample holders, screw cases, bolt cases, tool brackets and mail boxes made by this company. Illustrations are given throughout the catalogue of the interior of Hardware stores fitted up with Heller's steel shelf boxes, giving a very good idea of the improved appearance, which under those circumstances, a Hardware store would present. Full descriptions are given of all the details connected with the articles displayed, making this a very interesting catalogue of its kind.

The Forest City Foundry & Mfg. Co., Cleveland, Ohio. Envelope-size pamphlet catalogue, 16 pages, illustrating and describing the Monarch furnace manufactured by this company. It gives an admirable description of the furnace, showing its economical methods and desirable features.

National Screw & Tack Co., Cleveland, Ohio. Pamphlet catalogue of 36 pages, very attractive in appearance, covering the product of this concern, including stove, sink and tire bolts, rivets, clout, finishing and trunk nails, machine-screw tapped nuts, stove rods, cap, set and machine screws, together with a full line of wood screws, in iron, brass and other styles. These goods are all given with appropriate list prices and with illustrations covering the whole line. It is well printed on good paper and compiled with care.

Digitized by Google

The Ideal Mfg. Co., Detroit, Mich. Illustrated catalogue and price list of Ideal gas stoves and ranges for 1900. Oblong in shape, good size, printed on excellent paper and finely illustrated with half tones, showing the handsome product of this company among the different varieties made by them, from the Ideal Common-Sense Range, with all its various appliances, to the double-oven pattern, with and without water heater; also the same with side broiler, etc. They make a fine line of goods intended to be used by the aid of gas, in modern and unique styles original with this company. Included in its contents are shown the Ideal Gas Broiler and the Independent Water Heater, having features of note that are there described.

Avery Stamping Co., Cleveland, Ohio. 1900 catalogue of their "Never-Break" seamless steel ware, which has been their leading specialty for several years. It covers everything they make in this popular line of goods, including frypans and spiders, skillets, cake griddles, flat and round bottom kettles, Scotch bowls and stew pots, Maslin kettles and other steel cooking utensils. Included in the contents is a line of extra heavy tinned hotel stew pans of the various and necessary depths for such use, and the "Never-Break" children's steel sled skates, which is a popular part of their product as well. They also manufacture and illustrate in this catalogue steel fence posts of a style original and unique with this company, post-hole diggers, steel garden trowels and seamless elevator buckets in various styles. The catalogue is handsomely gotten up on good paper, well printed in two colors on every page, and reflects great credit upon the company.

T. H. Cranston & Co, Nos. 58–60 Wabash Avenue, Chicago, Ill. 1900 catalogue of bicycle sundries, which is a catalogue of 64 pages, fully illustrated, covering a large variety of bicycle sundries and supplies to dealers, which are fully illustrated, with list prices attached, being the product of a number of Eastern concerns as well as others for whom this firm are sole Western agents.

Philadelphia Commercial Museum, Philadelphia, Pa. Among other publications recently issued is one upon "Asphaltum," which is Bulletin No. 2 from the Scientific Department, covering twenty-four pages, and devoted to the history of this particular article, the contents of which are extremely interesting, showing great care in its preparation and compilation, and should be in the hands of every one interested in this special product. In connection with the above, they have recently issued a booklet of sixteen pages of a size to fit a large envelope, and called "Trade Pointers: The Part They Play in the Development of Foreign Business." Under the head of "How a Commercial Museum Report May Aid an Exporting Manufacturer" is given a large amount of information that will be of great advantage to the reader interested in this feature of any business. They give in connection therewith a report of the Compiling Department of the Bureau of Information, showing the number of special inquiries received, together with the names of the foreign countries from which they were received, and also the items of information desired, with the numbers attached to the same, to which reference could be made by any one desiring to follow it up. These publications are of an extremely useful character, and should be read largely by those interested particularly in the export trade.

"The Department Store System." We are in receipt of a thirty-six-page pamphlet devoted to this subject, and written by William Cooke Daniels, of Denver, Col., who prepared and read the same to the Philosophical Society of Denver, March 22, 1900, by invitation of that organization. He states in connection therewith that while his paper makes no pretense to finality, and specifically disclaims even an attempt at completeness, it was considered sufficiently comprehensive to justify compliance with the suggestion that it be published in pamphlet form. This arises from the fact that it had received the thoughtful care in preparation which permitted the hope that it might prove of some permanent value as a contribution to the scant literature on the subject which this treated. It is a very interesting paper, the perusal of which would incline the reader to think that the department store had come to stay, and was perhaps not so great an evil as the general impression credits it with being.

The Trade Journal.

The possible value of the trade journal, as a medium of communication between the builder of machinery and the purchaser of that machinery, can scarcely be overestimated.

Time was when the most serious problem that confronted the would-be-founder of a trade journal was the selection of a title which should at once identify his publication in the minds of advertisers, with the trade or industry it was supposed to represent and cater to. To-day the problem is to actually identify the publication with its trade; to make it of so great service, and so necessary to the trade, that subscriptions to it will materialize in generous number.

Time was when a man could have a dozen or so "dummies" of his proposed publication made up, put a hundred dollar bill in his pocket, go out upon a trip of two or three weeks among advertisers, tell them what he was going to do, and return with advertising contracts sufficient in amount to pay cost of publication for six months, or in many cases for a full year. Those were halcyon days. Times have changed. The advertiser, to-day, doesn't care a penny about what the would-be publisher is going to do; he's got through supplying capital to set publishers up in business. Now he wants to know what the publisher has done, and he is right.

Time was when the only implements the editor of a trade journal required were a little hard common sense, a pot of paste, a pair of shears and a big pile of exchanges. To-day the editor of an influential, successful trade publication must be technically versed in mechanisms, materials and processes, and must have at his command the services of a corps of writers expert in the line of trade catered to. The day has gone by when cheapness in the cost of production of the trade journal is to be regarded as evidence of business acumen upon the part of the publisher.

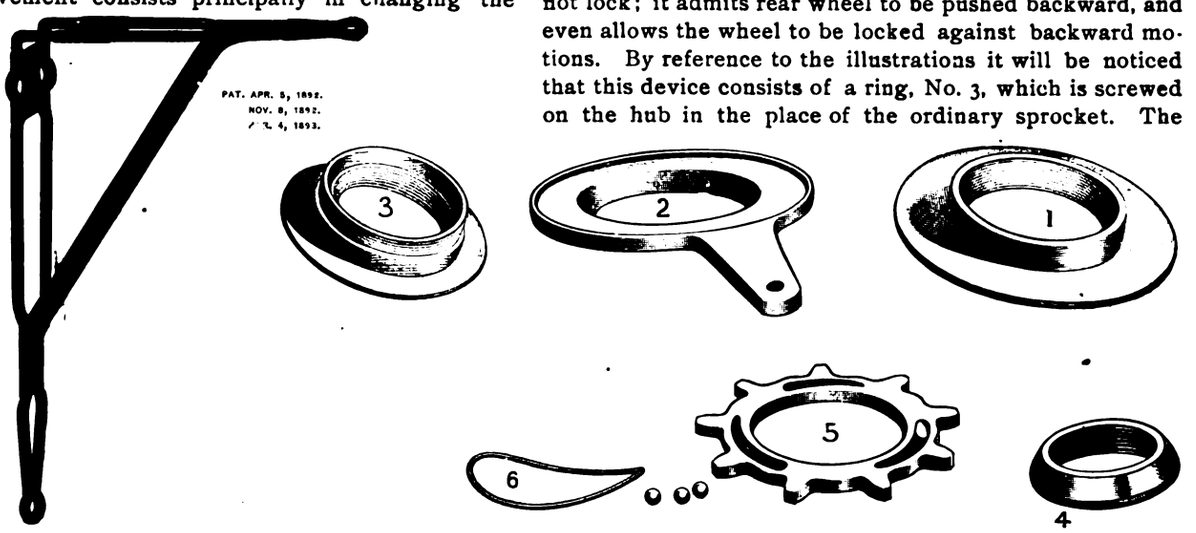
It is inevitable that the periodical of superior excellence will force out of the field the periodical of mediocre merit. The printed expression of the brightest, most intelligent thought will always command the largest degree of progressive attention, and that periodical, catering to any line of endeavor which secures and presents this thought, will achieve the broadest measure of success and support, both in subscriptions and in advertisements.—*Machinery Advertising.*

Acetylene Gas.

Acetylene is much less poisonous than coal gas, being practically free from sulphuretted hydrogen and carbonic oxide with which coal gas is always more or less contaminated, which constitute the really poisonous element.

And right here is a matter well worth your consideration. It is well known that a conservatory cannot be lighted with coal gas, as the plants are destroyed by the poisons evolved from the lights

We conducted a few experiments which demonstrated that plants would thrive under acetylene light and assume their natural color.



Tender shoots would become perfectly white in thirty-six hours when left in a dark place, but would assume their green dress with astonishing rapidity when the acetylene light was turned on, a green hue being observable within five hours afterwards.—F. Cortez Wilson.

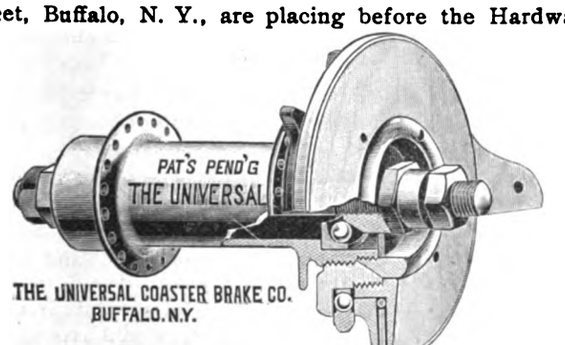
NEW GOODS AND SPECIALTIES.

Bradley Improved Steel Shelf Bracket.



The Atlas Mfg. Co., New Haven, Conn., who are the manufacturers of the Bradley Steel Shelf Bracket, an illustration of which is here presented, have greatly improved this desirable specialty, and it deserves special mention. The improvement consists principally in changing the

point where the wires are brought together. Formerly they were joined under the metal clasp at the point B; by means of a new device they are now joined at the point A. By this new construction two solid wires are secured, running through the whole length of the bracket, and increasing its strength by this method of construction almost one hundred per cent., at the same time giving a greater facility to its production and superior accuracy as to perfect results. The company state they have also practically completed a duplicate plant for the manufacture of these goods, and are in a position to produce them with greatly increased rapidity and economy. The saving thus effected is placed right back into the goods by substituting very much heavier wire and steel for the gauges formerly used. This was not really necessary, because the bracket has always been claimed to be the strongest of all the low-priced brackets on the market. This improvement, however, will remove the prejudice which some of the trade have felt on account of the light appearance of the goods. Prices on these goods have not been advanced on this account, but as already noted, the economy effected by improved machinery has in this way gone into the goods.

The Universal Coaster Brake.

The Universal Coaster Brake Co., No. 61 Chandler Street, Buffalo, N. Y., are placing before the Hardware

and Bicycle Sundry Trade the Universal Coaster Brake manufactured by them, which possesses mechanical features of importance which commend its introduction, and which we illustrate in the cuts herewith displayed. Among the advantages claimed by the makers for this coaster brake are the following: It can be fitted to any hub; is a positive clutch, and yet a free coaster; possesses a powerful and instantaneously releasing brake device, which cannot lock; it admits rear wheel to be pushed backward, and even allows the wheel to be locked against backward motions. By reference to the illustrations it will be noticed that this device consists of a ring, No. 3, which is screwed on the hub in the place of the ordinary sprocket. The sprocket, No. 5, revolves freely on this ring and is held from lateral movement by the brake disc, No. 1, which is screwed on to the ring, No. 3. The brake lever disc, No. 2, is mounted so that it will rotate freely on the flange of the brake disc, No. 1, between it and the sprocket, No. 5. The spring, No. 6, tends to keep the two flanges, No. 2 and No. 1, apart, to bring the balls into engagements with their respective cams. The balls do not depend on gravity for their action and grip at equal parts of the circumference. The cams are continued through the sprocket, thereby forming cams on either side. When the balls are engaged in the braking cams they are entirely disengaged from the locking cams. This feature is what allows the machine to be either backed or locked against backward motion. The brake is screwed on the hub in place of the sprocket and is locked with lock-nut, No. 4. All brakes are shipped assembled, thus avoiding loose parts.

The "Ritefast" Note-Book and Copy Holder.

The accompanying illustrations represent a note-book holder marketed by the Universal Specialty Co., of Pike Station, N. H., and No. 151 Chambers Street, New York, under the name of the "Ritefast" Note Book and Copy Holder. This note-book holder, see Fig. 1, is composed of two strips of thin, hard wood, highly polished, ten inches long by five and three-fourth inches wide, flexibly joined by a russet leather hinge and trimmed with nickel-plated

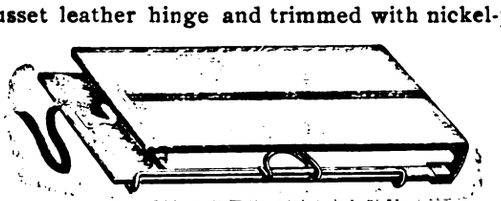


FIG. 1.—THE RITEFAST NOTE BOOK AND COPY HOLDER, FOLDED

clips for holding the note book or manuscript in place. It is also provided with a nickel-plated wire side rail with an indicator for keeping the place on either note-book or copy, see Fig. 2. This indicator can be thrown over to one side when not wanted. A tape attached to one side of the holder and passing through a clip on the other side, permits

Digitized by Google

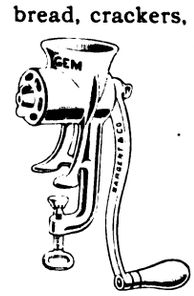
an instantaneous adjustment of the holder to any desired angle, from almost a straight perpendicular to a flat position. There are no springs to lift before turning the leaves, and

FIG. 2.—THE RITEFAST IN USE.

as the holder occupies no more space than the note-book alone, it is never in the way. It is claimed that by the use of this holder a stenographer can write at least ten per cent. more letters a day, and that it saves the strain on the eyes caused by reading from a note-book lying flat. The "Ritefast" is put up in a strong paper box and retails for 75 cents.

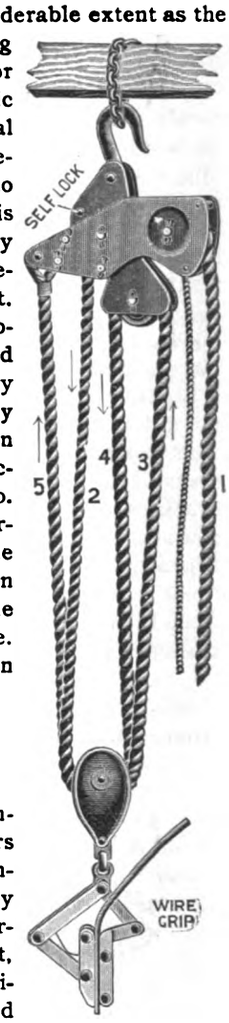
The Cleveland Lawn Weeder.

The Cleveland Lawn Weeder Co., No. 89 Public Square, Cleveland, Ohio, are distributing through the Hardware trade the seasonable specialty which we illustrate herewith. It is marketed under the name of the Cleveland Lawn Weeder, and is a handy little device for the purpose, because in its action it cuts right down to the root of the evil and removes it bodily. In its construction the blade is made of steel and the socket of malleable iron. Provided as it is with a wood handle of sufficient length for the purpose, it makes a very handy and desirable article. In its use the curved edge of the blade enters and loosens the soil. Slight pressure on the lever then causes the toothed jaw to grasp the plant, and a very slight pull suffices to dislodge the same without disturbing the surrounding sod to any great extent. Wherever it has been introduced it has met the approval of the Hardware trade, and bids fair to be a salable specialty for an indefinite period.



White Enamelled Letters and Numbers.

A. V. Taylor & Co., No. 1062 Central Avenue, Cincinnati, Ohio, are manufacturing a line of goods which has been received with considerable favor by the Hardware trade, and is meeting with successful approval wherever introduced. It is represented in the small illustration herewith, showing a number of small signs, suitable for every desirable use, and made in glass, wood, cloth, paper, metal and enamelled iron. Their principal specialty is the line of white enamelled letters, suitable for window signs, and handy house numbers, which many Hardware dealers have found a profitable line to carry in stock. They also make enamelled steel signs for street name plates, wagon signs, etc. These goods, in great variety, are fully illustrated in a new catalogue, now ready for distribution to the trade, and is well worth sending for by those interested in introducing new lines of attractive stock. The manufacturers are willing to forward samples of their "Handy House Numbers," to impress the utility of handling this line upon the dealers' attention.



The Gem Food Chopper.

Sargent & Co., No. 149 Leonard Street, New York, and New Haven, Conn., are meeting with great success in the distribution of their "Gem Food Chopper," which is referred to in their advertisement in another column. It is designed to be clamped to the kitchen table, so as to be ready for use at all times during the day. As it is constructed to chop equally well raw meat, cooked meat, all kinds of vegetables, fruit, bread, crackers, cheese, nuts, and a number of other articles used in making appetizing dishes or dainty desserts. The general verdict is, that for an economical method to prepare food it is without a rival.

The Burr Safety Lift.

The Burr Mfg. Co., Cleveland, Ohio, are placing upon the market the Burr Safety lift, which we illustrate herewith, which includes an improved tackle block for general purposes, which is used to a considerable extent as the best appliance possible for stretching wire, not only for fences, but also for telephones, telegraphs, and electric roads. At the very small additional cost of a steel wire grip or "come-along attachment, that is necessary to be attached to the hook, it enables this same block used in the Burr Safety Lift to become the latest and most desirable wire stretcher on the market. Its strength is undoubted, and its applicability is evident. We are informed by the manufacturers it is already being used to a considerable extent by such large concerns as the Western Union Telegraph Co., the Western Electric Co. and the General Electric Co. A number of street railways in America have also found it useful for the purpose above mentioned. It has been exported, and is largely used by the General Traction Co. of Paris, France. This would emphasize its merit as an article of considerable utility.

The Washington Bureau of Foreign Commerce.

The consular officers, and, to an increasing extent, the diplomatic officers as well, are rendering a variety of important services to American trade by answering through the Bureau of Foreign Commerce of this Department, specific inquiries from individual business firms as well as from organized trade bodies, with important results in enlarging the markets for American manufacturers as well as for the products of our farms, our forests and our mines. The answers to such inquiries are utilized in the form of Consular Reports.

Advertisers' Corner.

The great object to be aimed at in display is to so construct an advertisement that it will at once draw the attention of the readers of itself, in the midst of the great number of other advertisements.—*Ex.*

Let the largest house in any line stop advertising, and note in what incredibly short space of time a larger business will be built up by somebody who works while they sleep. Are you sleeping?—*The Wheel.*

It is a good thing to write about something occasionally in such an "honest" way that the thing itself won't sell. People will then give you credit for being equally honest when you use superlatives.—*Good Advertising.*

Advertising isn't cuteness. It is plain, hard, cold, business sense. A little humor or a little pleasantry isn't a bad thing sometimes, but the main thing is to get the facts forcibly before the people most likely to be interested.—*Printers Ink.*

Advertising should be used in business just exactly as medicine is used in sickness. If a small dose is not enough give a larger one. If the large dose seems to be too big, or if the patient improves rapidly, the dose may be diminished.—*Ex.*

Doctor—In a day or so it will be safe to give your wife some pleasant reading matter.

Anxious Hubby—Hopeful, high-class poetry, eh?

Doctor—No, papers with pages of department store advertisements.—*Ex.*

Whenever you succeed in making yourself and your goods so well known that all who need supplies of what you produce or handle, think of you simultaneously with their recognition of such need, you are doing effective advertising.—*Shoe and Leather Facts.*

Two inches single is getting to be a popular display for modest users of newspaper space. It gives them room enough to say a little something and say it strongly; it is big enough to get in very effective display and it is not an expensive space to maintain.—*Ex.*

The modern newspaper reader does not buy a paper in order to read your advertisement; he gets it to read the news; he is going to read the news, and he hasn't much time to do it in, either. If your advertisement is placed in his way, he will, of course, stumble over it.—*Exchange.*

A young lady explained to a printer the difference in printing and publishing, and in conclusion said: "Now, you may print a kiss on my cheek, but you must not publish it." With that he locked the fair form in his arms so that it would not pi and went to press.—*Ohio Newspaper Maker.*

It's much more important to make plain the goods advertised than to bring out the firm name. If people are interested in the goods, they'll see the firm name—they'll make it a point to see it. Space is too valuable to be used up by printing firm names with the biggest type in the office.—*Iron Age.*

Merchant—What position do you desire in our establishment, sir?

College Graduate—Oh, something like confidential adviser or general manager.

Merchant—Good! You may have both jobs. I will make you an office boy.—*Judge.*

A deep and varied knowledge of human nature is the first requisite of advertising. To attract and hold the attention, to persuade, to convince—these are the psychological problems to be grappled with. A merchant who does not give his advertising the closest and hardest study has no good reason to complain of failure.—*Printers Ink.*

Don't forget the fact that in the same business as you are engaged in there are many others, each one of whom is doing all in his power to get all the trade he can. No little point escapes their attention. Nothing is considered too insignificant to be despised if it will help bring trade to them.—*Harness World.*

Some people say that advertising is all a matter of luck; that you cannot tell what advertising is going to do, or whether or not it is going to pay. This may be true, but it is very strange that the man who gives careful thought to his advertising and does it in an intelligent and straightforward way usually has the luck on his side.—*Art in Advertising.*

Advertising is telling people about things. Telling them what things look like, what they are good for, who sells them and what they cost. Getting business is merely a question of advertising. It is merely a question of asking hard enough and long enough and often enough and in the right way. Sometimes it takes a good while to find out the right way, but there is a right way for everything.—*Billboard Advertising.*

The road to advertising success is over prostrate forms of thousands who have spent millions in small sums in vain. The victims of "one insertion" must be by far the largest number. Unfortunately they think they have been advertisers and blame advertising as a failure. They tell their experience and dissuade others from trying to advertise. The success of the successful is the best proof that advertising of the right sort does pay.—*Advertising, Cincinnati.*

Minor Inventions of the Last Hundred Years.

Among the minor inventions of the nineteenth century we may mention the following: The making of needles and pins by machine, the barbed-wire fence, artificial stone, artificial fuel, artificial limbs, the breeches buoy, the hot water bottle of rubber, cold storage for preserving meats, petroleum, laughing gas, glucose, starch production from corn, carbonated beverages, bundle carriers in shops, condensed soups and other condensed foods, high explosives, liquid air, liquid oxygen and liquid carbonic acid; hydraulic mining, electro plating, pressed glass and the extraction of dyes, drugs and other useful products from coal tar.

In 1800 people were obliged to depend for their food almost entirely upon what they could get in their immediate neighborhood; to-day the tables even of the moderately well-to-do are supplied with luxuries fetched from all parts of the earth. Canned foods are a novelty, comparatively speaking. Within the last few years, by the way, it has been discovered that the flavors of the best kinds of butter and cheese are due to the presence of certain species of bacteria, and now these beneficial microbes are propagated artificially and put up in bottles for sale to dairymen. In up-to-date dairies, cream is separated from milk not by skimming, but by a machine that employs the principle of centrifugal force. Bees are furnished nowadays with artificial foundations for their combs, in order that they may not waste time and honey making material in comb building. Movable frames for hives are a nineteenth-century invention.—*American Exporter.*

Stanley proves the Nile to be 4100 miles long.

REVIEW OF THE MARKETS.

Hardware: The easier conditions surrounding the Iron and Steel markets, the gradual catching up on orders, the lack of business made evident by a slack demand when goods are kept at high-grade quotations on a market undoubtedly of a sagging order—all this influence has affected the buoyancy of the general market of late, and the big drop in prices of the wire product, will cause a general leveling up of "top-notch" prices, and business will naturally be strengthened in consequence. It is the general belief that the low prices named for wire products is to create a strong demand—the market having been a waiting one—greatly lessen the large surplus stock held at the mills, and permit a small advance at a later date that will be appreciated by present purchasers and enable them to average up any possible loss on present stocks.

Wire Nails: As was anticipated would be the case when the announcement was recently made that overproduction had created too large a stock, the American Steel & Wire Co. decided on a scale of prices that would give the trade a confidence in buying, while successive declines of a smaller amount would only cause dissatisfaction and lack of harmony in their endeavor to move a large surplus stock. In announcing the changes in their quotations the American Steel & Wire Co. say: "This reduction in price is made to reduce stocks and is for immediate specifications and prompt shipment only, and subject to withdrawal without notice. The reduction is applicable to all contracts which are unshipped for the above-named standard goods, but no reduction will be made on any goods which have already been shipped prior to this date." The following quotations represent the market, with the prospect ahead of large purchases, and a possible advance when stocks are sufficiently reduced to make that policy advisable. The following are manufacturers' quotations f. o. b. Pittsburgh; terms, thirty days, 1 per cent. off in ten days:

To jobbers in carload lots	$2 20	Base.
To " in less than carload lots	2.22½	"
To retailers in carload lots	2 35	"
To " in less than carload lots	2.45	"

New York prices, to meet the above conditions, are named as follows:

To retailers, carload lots on dock	$2.53	Base.
" less than carloads on dock	2 66	"
Small lots from store	2.75	"

Cut Nails: The present market on Cut Nails is in an unsettled condition, consequent upon the sweeping decline in values announced on the products of the wire nail makers. The Cut Nail manufacturers will hold a meeting to-morrow to decide upon a scale of prices in harmony with the radical changes made by their principal competitors.

Barb Wire: Following the great decline in price on the leading staple Barb Wire quotations were revised as follows, to meet the new conditions, f. o. b. Pittsburgh. Terms, 30 days, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted	$ 2.65
" " Galvanized	2.80
" in less than carload lots, Painted	2.07½
" " " " Galvanized	2.82½
To retailers in carload lots, Painted	2.80
" " Galvanized	2.95
" in less than carload lots, Painted	2.90
" " " " Galvanized	3.05

Smooth Wire: Not quite so great a decline was announced in Smooth Wire, as in the other leading wire products, the slight difference arising probably from the fact of the present market on this product being slightly more active, and suffering less in the current demand, the following representing the market: f. o. b. Pittsburgh; terms, thirty days, or 1 per cent. off in ten days:

To jobbers in carload lots	$2 15	Base.
To " in less than carload lots	2 17½	"
To retailers in carload lots	2.30	"
To " in less than carload lots	2.40	"

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, $1.10.

Augers and Bits: A well represented meeting of manufacturers of Augers and Auger Bits, was held last week, in which the scale of discounts now prevailing in the trade was confirmed. The unanimity and good feeling prevailing among the manufacturers of these goods at the present time were commented upon, being so different from the conditions surrounding the industry a few years ago. The present range of discounts applying to this line of goods is as follows:

Common auger bits	60@60&10%	
Jennings' pattern auger bits	50&10%	Jennings' list.
" " blued or black lip	50&10@60%	common list.
Nut and B. M. augers	60@60&10%	" "

Carriage Bolts, Machine Bolts, etc.: The manufacturers of Carriage Bolts, Lag Screws, etc., held a meeting a week ago, and decided that a slight concession in price might have a beneficial effect upon the current demand; as a result of the conference, the following prices were established to apply to the smaller trade, the usual quantity rebates being made to large buyers. Terms, 30 days net, 1 per cent. discount for cash in 10 days, with the usual freight allowance on shipments of 300 pounds or over:

Common carriage bolts	50&15%
Machine bolts with H. P. or C. P. plain nuts	60& 5%
Machine bolts with C. & T. nuts	50&15%
Machine bolts without nuts	60&5&10%
Machine bolts, blanks	60& 5%
Bolt ends with H. P. or C. P. plain nuts	60& 5%
Bolt ends with C. & T. nuts	50&15%
G. P. coach screws	70%
Cone point lag screws	70& 5%
Skein screws	70%
Forged set screws and tap bolts	40%
Plow bolts and guard bolts	50&10%
Sleigh shoe bolts	50&10%

Nuts: At the meeting held last week the Nut manufacturers deemed it advisable on account of the prevailing conditions in the iron market, to make a reduction in prices represented in the following, which is subject to the usual allowance for large quantities:

	Off list.
Hot pressed, square, blank	4.70 cents.
Hot pressed, hexagon, blank	4.90 "
Hot pressed, square, tapped	4.50 "
Hot pressed, hexagon, tapped	4.70 "
Cold punched, plain, square, blank	4.00 "
Cold punched, hexagon, square, blank	4.00 "
Cold punched, C. T. & R., square, blank	3.80 "
Cold punched, C. T. & R., hexagon, blank	4.30 "
Cold punched, plain, square, tapped	3 80 "
Cold punched, plain, hexagon, tapped	3.80 "
Cold punched, C. T. & R., square, tapped	3.60 "
Cold punched, C. T. & R., hexagon, tapped	4.10 "

Cordage: The demand for rope is this season of a backward character. Buyers are keeping their wants well in hand, hoping for some large importations of hemp to have an effect on the market, prices having been well kept up so far, without much fluctuation. The following represents the market for carload lots, with an advance of a quarter of a cent for less quantities, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger	per pound,	15½	cents.
" ⅜ inch	"	16	"
" ½ and 5-16 inch	"	16½	"
Sisal, 7-16 inch and larger	"	9¼	"
" ⅜ inch	"	10¼	"
" ½ and 5-16 inch	"	10¼	"
" Lath Yarn, medium and coarse	"	9½	"

Manila Tarred Rope, 15-thread, 15½ cents. Manila Hay Rope, medium, 15½ cents. "A" grade of Jute Rope 7½; "C" grade 7 cents. Jute Wool Twine, 4 ply only, per pound, 7 cents; all other sizes, 7½ cents.

Binder Twine: The market for Binder Twine has not as yet been an evtremely active one; most of the large buyers specifications have been conspicuous by their absence, and the manufacturers in consequence are not overstocking the market by too large a production. The following quotations are made on Twine: f.o.b. New York, Philadelphia or Boston, with a reduction of ⅛ cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of ¼ cent per pound for carload lots:

White Sisal, 500 feet to pound	11½ cents.
Standard, 500 feet to pound	11½ "
Manila, 600 feet to pound	14½ "
Pure Manila, 650 feet to pound	15¾ "

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels ..... 64 cents per gallon.
In lots of 5 barrels or more ..... 63 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 71 cents per gallon.

THE BOSTON TRADE.

Favorable conditions as regards weather, collections, building outlook and general good feeling began to make their appearance, when this morning every jobber throughout the country received in a well directed envelope a

Digitized by Google

bomb which immediately exploded, the amount of execution varying according to the stock of wire and nails which each recipient had on hand. Happily the quantity of these commodities among our New England trade is reported light, and the loss will not be so great as when stocks had been in their normal condition.

The condemnation and criticism which have been hurled at the projectors of this missive, even up to the present writing, would be very interesting reading. What the effect will be is somewhat problematical, but just because one man makes a fool of himself we do not believe every other man will follow.

As regards the volume of business during the past two or three weeks it has been satisfactory. What it will be next week we do not know. FRYE, PHIPPS & CO.

THE PITTSBURGH TRADE.

Fine spring weather has started seasonable goods moving and jobbers are well employed filling orders by mail and through travelers.

Building is going forward, and this year promises to be a record-breaker in our city in this department.

Concentration of the works of the American Steel & Wire Co. on an island in the Ohio River, a few miles below Pittsburgh, will begin shortly. The land is pretty well bought up, and when actual building begins will mean a large outlay for material and work. The National Tube Works have acquired large additional ground and will practically remodel their works. This policy of spending some of the profits in good times to modernize their plants and keep them strictly up to date, will enable the larger combinations to defy competition when the next dull times appear. LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

Anxiety to sell goods before they decline has caused some price cutting. That there will be a serious decline is more a fear than an expectation. The fact that combinations tend to steady prices is not yet fully realized, and the memory of past radical fluctuations still influences dealers.

A large portion of manufactured goods are as low as they can be made with the present prices of material. Many of them are lower. Manufacturers have been extremely conservative in advancing prices; a few manufactured goods that were too high have weakened in price and created a fear of a general break. If, however, it comes, it will soon be mended. The Presidential contest, if it shall be between a $13 a month private and a $13,000 admiral, may affect business.

Statesmanship will be more in demand in the next four years than ever if we are to maintain the magnificent advance we have made toward a world power. It is to be hoped that the Presidential campaign may not be altogether spectacular.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE CHICAGO TRADE.

Business during the past two weeks has increased to such an extent that we are nearly taxed to our utmost to fill orders with our usual promptness. This is especially so on the entire line of small shelf Hardware, also on all of our lines of special brand goods, particularly those now in season.

With the prospects of more settled weather in the near future, and the opening of Spring, which is unusually backward this year, we look for a very heavy business all along the line. The quantities that are being called for on most orders indicate that the retail trade have permitted their stocks to become badly depleted, and that their shelves sadly need replenishing (to a larger extent than has been the case for some time), and as prices on most all goods remain firm the tendency for curtailing orders to the minimum seems to be a thought of the past.

Manufacturers, as a rule, are still full of orders, this

being confirmed by the continued slow shipments on back orders, placed months ago, as well as on additional specifications of a more recent date.

Then again, the recent advances on picks, mattocks and grub hoes, and the prevailing prices on such staples as shovels and spades, also Mrs. Potts' irons, confirm our opinion of present prices remaining intact for some time to come, although we do not look for any further advances; yet this is entirely problematical.

The railway car and implement shops all seem full of work, as recent orders for large quantities of supplies clearly demonstrate.

Builders' Hardware in this city, while moving slow at present, and during the past few weeks, will no doubt move with a spurt as soon as the labor troubles now existing are adjusted, some of the tradesmen already having resumed work, with the possibility of all of them doing so soon; at least this is the impression generally, as far as we can learn. WELLS & NELLEGAR CO.

THE SAN FRANCISCO TRADE.

As predicted in this correspondence two weeks ago, the trade contest of the Middle West and Far West Hardware jobbers, in the dignified presence of the Interstate Commerce Commission, continued within three days of the fortnight allotted in the prediction.

Within these last three days *Hardware's* correspondent has seen the local men of the contest and is able not only to report that they again show normal tranquillity of temperament, and hopeful anticipation as to the Court's decision, but, even in the presence of accumulated work awaiting their attention, they courteously gave the correspondent a few minutes to smile over several recalled incidents of the last two weeks, notably some of the antics of disconcerted witnesses. Yet, withal, these local merchants gallantly admit, and they don't want the fact concealed, that while in the heat of their recent battle it was perfectly clear to them all the while that they were right up against real foemen worthy of their steel—and iron.

An outcropping from the foregoing case brings to mind other trade gossip heard this week. James E. Hunt, a Portland, Ore., retail Hardware dealer, gave testimony to the Interstate Commission at the above investigation that retailers in his city had an association, of which he is a member, and that they made prices as an association, "but, agreements have been broken so often that there is to be a disbandment of the association at the next week's meeting."

This lack of association harmony is very like what was told the past week by a prominent Market Street regular shelf Hardware dealer in this city. "It is well known to the trade," he said, "that a certain dealer in the city has been doing business with consumers of late at an actual loss, and that he is selling many goods at a better dis-

Digitized by Google

count than first hands will give the house to replace the goods."

Three distinguished visiting members of the trade have been here within the last fortnight enjoying themselves and congratulating their fellow contemporaries here on good business now prevailing and continued bright prospects as seen from their respective standpoints. Two of these visitors were the New York Cutlery firm, Graef & Schmidt, the third being Chas. T. Boynton, manager of the Chicago department of the American Steel & Wire Co. and the Washburn & Moen Mfg. Co. Mr. Boynton, who was accompanied by his wife, left here for home April 13. The next day following Mr. Schmidt did the same. Three days before Mr. Graef and wife left for Salt Lake.

Trades Press Association.

Southern Hardware Jobbers' Association.

The following letter has just been mailed to the members of the Southern Hardware Jobbers' Association:

Knoxville, Tenn., April 19, 1900.

As stated in our general letter of March 6th, the tenth annual convention of our Association will be held at Old Point Comfort, Va., on the 13th, 14th and 15th of June, the Hotel Chamberlain having been designated as official headquarters.

The writer was at Old Point about the middle of last month, having stopped over on his return trip from the meeting of the Shovel Association in New York City. Mr. Alan F. Campbell, the manager, gave us a cordial welcome, and we were enabled to make exceptionally satisfactory arrangements for our annual meeting. Those of our members who had the pleasure of attending our eighth annual convention at Old Point in June, 1898, will remember with much pleasure the courteous treatment accorded us by the management of the Chamberlain, and they will also bear in mind the fact that this hotel is perhaps the most luxuriously appointed hotel on the Atlantic Coast and further, that the cuisine department and dining-room accommodations are unexcelled. The manager has given us a rate of $2.50 per day without bath and $3 50 with private bath. The minimum charge for a fraction of a day, $1. Ample convention halls and committee rooms will be, as usual, furnished gratis. The manager states he will actively cooperate with the reception committee in giving our members and visitors enjoyable entertainments each evening during our stay at Old Point.

While we will have the Chamberlain practically to ourselves during our meeting, as no other convention is booked for that time, and there will be little likelihood of the hotel being crowded, yet it would be a good idea for you to enter into correspondence with the manager, engaging such accommodations as you will desire during your stay at the Chamberlain. Mr. Campbell advises us that he will be only too glad to reserve quarters for all of our members.

As to railroad rates, we beg to advise that a rate of one fare and a third for the round trip, upon the certificate plan, has been granted us, the particulars of which will be given you at a little later date.

Southern Hardware Jobbers' Association,
C. B. Carter, Secretary-Treasurer.

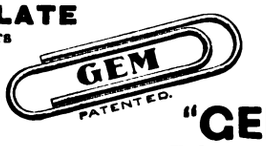
The General Demand for Education.

America has become the workshop of the world. Immense resources and economic methods of manufacture enable her to compete successfully with all other manufacturing countries in their own markets, and during the next few years the expansion of her trade will become the talk of the world.

The great impetus recently given to all technical trades and professions by the commencement of a new era of commercial prosperity has forcibly brought to the attention of the public the great value of technical education, acquired simultaneously with practical experience. The graduate of the ordinary technical university is obliged to accept a minor position in his profession, and trust to his education for rapid advancement. But the ambitious mechanic can make immediate application of his technical knowledge, and secure, in the shortest possible time, a lucrative position.

The various engineering colleges are open to but few. Night schools are only found in the larger cities. The international system of instruction by correspondence fully meets the requirements of ninety-five per cent. of the people by supplying the education for which employers are willing to pay, and pay well —*Exchange.*

Use of American Glass Has Increased Greatly.



"Where one mirror was in use twelve years ago there are 200 to-day," said a large dealer recently. "But this vast increase in the use of reflecting surfaces has been gained somewhat at the expense of accuracy, brilliancy and permanence. In the old days when a housewife bought a bit of looking glass it was esteemed a precious treasure, to be cherished like her rosewood cabinet and her best china teapot, and the glass on its part gave a faithful image of all that passed before it and lost nothing of its clear lustre as time passed. A pier mirror was an index of luxury. It came from France with costly furniture and feminine finery. But it was out of fashion when the cheaper article made its way everywhere.

The old mirrors were coated with mercury, and that is why, unless they were broken, they retained their pristine excellence year in and year out. Now there is only one manufacturer who uses mercury, and he does not do an extensive business. It doesn't pay any longer to make them in that way. Silver has grown so cheap and is applied so easily that it has replaced mercury.

Chemists combine with the nitrate certain chemicals, these varying with the different manufacturers, the composition used by each constituting his trade secret. But in all cases nitrate of silver is the foundation. Mercury costs about two and a half times as much as the silver nitrate, but it is always sure. If you buy a glass coated with quicksilver it will last you seventy-five years, but of

even the most expensive glass treated with silver nitrate one can never be quite certain. Two pieces may be taken out of the same solution at the same time, under identical conditions, and one may wear satisfactorily, while the other in a little while will begin to speck and show flaws, and no expert manufacturer can explain the reason for it.

There is almost no importation of mirrors into this country in these days. We still speak of French and German mirrors, but these words do not locate the locality in which they are made, but are merely trade terms, French mirrors meaning all in which the thickness of the glass is 3-16 of an inch or more, and German mirrors referring to the quality of the glass used, it being blown and not cast in plates, as in the case of the French mirrors. This thin glass came into popularity with the folding bed, intended to represent a sideboard or a dressing case. Its lightness made it peculiarly desirable for such purposes. Now it is used for as many purposes as the cabinet maker has styles of furniture.

Although French mirrors are not imported to any extent the glass from which the best plate mirrors are made is imported from France, the French glass being softer than the American, and consequently easier to bevel and to make into the unique designs so much in vogue.

If I were going to select a mirror for my own house, I should get the best possible quality of glass made in America for the purpose. It is not so likely to turn yellow by exposure to the air as the French plate mirrors often do.

The finest plate mirrors cost only about half what they did a little more than a decade ago, and of the cheaper grades there has been an indefinite increase in the quantity and in the reduction of price.

The American glass industry is in the flower of its prosperity. We are making everything from cut glass for the table to high-grade plate window glass, better than any one dreamed a few years ago that it could be done. There is 150 per cent. more glass used, partly cause and partly effect. We get out some things pretty cheap, and in consequence there is bound to be a lot of poor stuff on the market, but, on the whole, people are getting far more and better glass for their money than ever before.

Mirrors are in line with other glass. Cheap silver, too, has helped to make them available for all sorts of purposes, and for all classes of people. A lot of imperfect and perishable stuff is turned out for those who do not want to pay much for it, but the best grade of American mirrors cannot be excelled. It is not the duty merely that keeps out imported mirrors; it's because we have learned to make them better and cheaper in this country than anywhere else.

The business of college education is one of the greatest businesses of the country. The 426 colleges and universities, in which are enrolled 175,000 students, represent an invested capital of $250,000,000, and give employment to 25,000 persons as teachers and officers.—*Ex.*

The largest stockyards in the world are in Chicago. The combined plants represent an investment of over $10,000,000. The yards contain 20 miles of streets, 20 miles of water troughs, 50 miles of feeding troughs and 75 miles of water and drainage troughs. The yards are capable of receiving and accommodating daily 20,000 cattle, 20,000 sheep and 120,000 hogs.—*Exchange.*

He—What a splendid girl you are! Do you really think there is another person in this world as jolly as you are?

She—Oh! I don't know. I may be a jolly individual, but I think you're a jollier.—*Ex.*

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, $30.00; Full Nickel, $42.00.

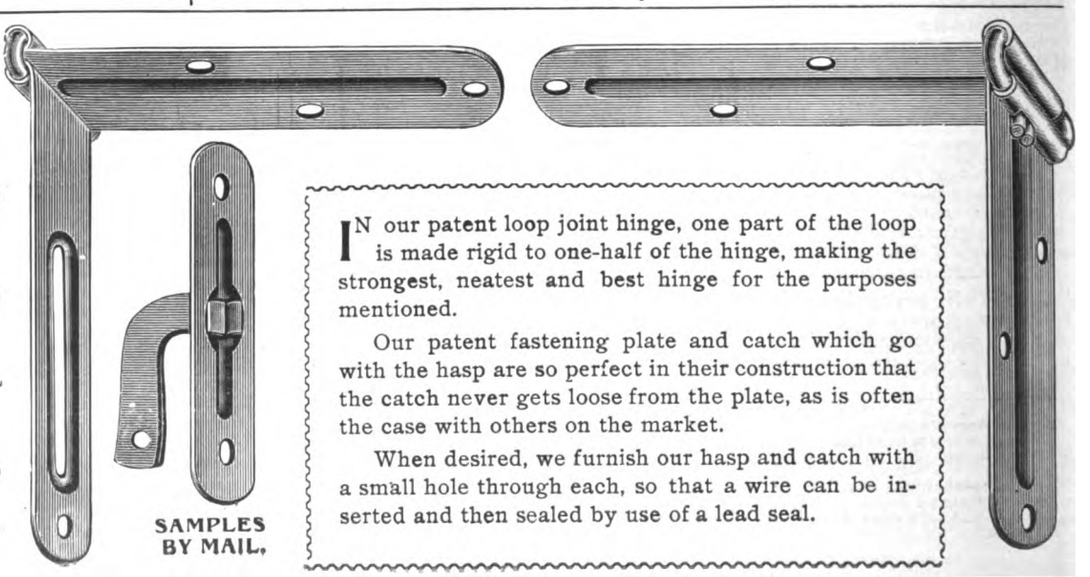
CARY'S PATENT

HINGE

AND

HASP



Designed Especially for

Fruit Crates, Milk, Egg, Cracker and other styles of Boxes, requiring a hinged cover.

CARY MFG. CO.,

19-21 Roosevelt St.,

NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [*General Hardware*]: Enclosed please find $2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

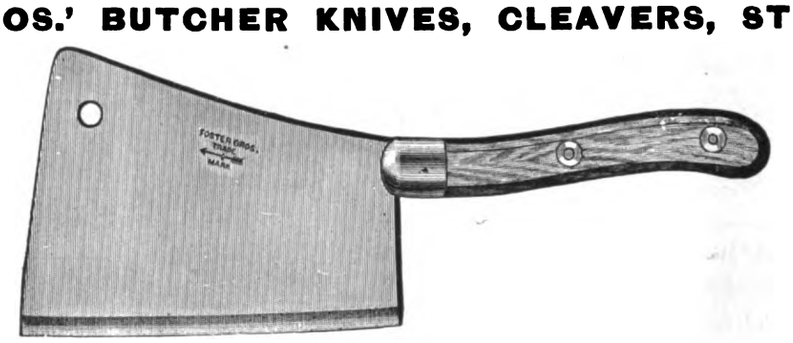
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us



has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

THE

ELECTRIC DROP STEEL FENCE RATCHET.

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

1st. It is simplest.
2nd. It is the lightest and strongest.
3rd. It is the most compact and rigid; no loose parts.
4th. Will tighten any length of wire desired.
5th. Adjustable to expansion and contraction.
6th. Can be attached to any point on the wire.
7th. It will tighten the wire uniformly because it draws equally from each way.
8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
9th. Can be used on any kind of post, either wood or iron.
10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
11th. When wire becomes loose or sags from use, it can be instantly tightened.
12th. No special wrench required; any wrench on the farm will operate it.
13th. The most important feature; it can be bought for Less Money than any other good ratchet on the market.

WHEN we began making our **400 Line of Cutlery,** we did not realize what we had. The wonderful sale and the perfect satisfaction and unanimous praise of these goods has opened our eyes. You see the fork is like any silver 4 tined fork. The tines are well made and plated with a combination which looks as well as silver and wears longer. The handles are solid and put together in such a way that they never can get loose or come off. They are absolutely hot water proof. The bolster is exceedingly beautiful, and the whole thing commends itself at once to the eye of the purchaser. We think hereafter we can produce a quantity large enough to supply the demand, and solicit orders and inquiries.

THE NEW YORK PUBLIC LIBRARY
ASTOR, LENOX AND TILDEN FOUNDATIONS.

HARDWARE

At the meeting on April 16th of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in the Club:

James W. Towne, Temple Court.
Charles E. Sutton, Toledo, Ohio.
Theodore D. Peck, No. 45 Chambers Street.
J. Edward Ogden, No. 147 Cedar Street.
Seymour N. Robinson, No. 220 Broadway.
Thomas H. Taylor, No. 71 Broadway.
Frank Freeman, No. 132 Nassau Street.

It was a great pleasure to see again at his accustomed seat in the Hardware Club of New York the esteemed member of the board of governors, Alfred D. Clinch, he having been laid up at home for nearly four weeks, afflicted with a painful trouble in one of his knees, that made locomotion not only difficult but impossible. He looks as though the enforced rest just at the present time did him a world of good, although with so much to do at his reorganized establishment in Chambers Street, he must have rejoiced more than once that they could move much more easily than he could.

The Ammunition Manufacturing Association has removed to the Vincent Building, Nos. 302-304 Broadway.

Miller Bros. Cutlery Co., Meriden, Conn., represented in New York by L. A. Lightfoot, as manager, have removed their New York office to the Mutual Reserve Building, No. 309 Broadway. A full line of samples of their entire product will be open for inspection in their new quarters. They are large manufacturers of fine steel pens, comprising 60 patterns, a sample box of which, containing 9 popular styles, will be mailed without charge to bookkeepers sending addresses.

Charles J. Godfrey, dealer in ammunition, guns, bicycles and sporting goods generally, has moved his establishment from the old location, No. 11 Warren Street, New York, across the way to No. 6, taking the premises occupied previously by the Liberty Cycle Co.

Among other recent changes in the Hardware trade and its relative interests, Alfred H. Smith has moved his extensive brush business from Nos. 131-133 Duane Street, to the more commodious quarters, Nos. 84-86 Chambers Street. This is a central location for his extensive interests that cannot be otherwise than convenient.

Thomas F. Keating, after having been identified with the Yale & Towne Mfg. Co. for a generation, has disposed of all of his interests in the company, and is no longer connected with the company in an official capacity. He has opened an office at No. 23 Warren Street, New York, where he will still be in touch with the trade, and where his long experience in everything connected with builders' Hardware and matters appertaining thereto, can be made use of by those desiring to draw on his superior knowledge. His connection with this branch of the Hardware business is well known to every Hardware jobber in the country, he having been with the Yale & Towne Mfg. Co. from the time that their office in the city was by no means extravagant in dimensions. Mr. Keating is also well known to the trade as the treasurer of the Hardware Club, having officiated in that capacity ever since its foundation.

Among the many expressions of admiration and approval called into being by our Anniversary Number, the few lines appended from the New York *Times* gives us the highest meed of praise, in so few words it proves a gem of purest ray serene:

"The tenth anniversary number of *Hardware,* which bears date April 10, 1900, is one that publishers, editors and printers may deservedly take pride in."

Among the recent visitors at the Hardware Club of New York may be mentioned Alfred Weed, Vice-President and General Manager of the Arcade File Works, whose headquarters are at Anderson, Ind. He reports the business as being the heaviest in production in the history of the company, backed up as it is by large demands for the export trade, which is to-day an important outlet. It is not generally known that for the magnificent deer's head, finely mounted, which decorates the wall of the Club dining-room, we are indebted to the courtesy of Mr. Weed.

For the most artistic circulars distributed to the Hardware trade calling attention to the products of a manufacturer, the palm for excellence of workmanship, both in a literary sense as well as in that of artistic illustration, may well be awarded to the Corbin Cabinet Lock Co., New Britain, Conn. The high class of work shown in the engravings alone gives evidence of the master hand of experience; and few are so well equipped mentally or otherwise for successful achievement in this high standard of exploitation as J. B. Comstock, "the man in the corner," who, possessing *carte blanche* from the factory standpoint, knows only too surely the perfect expression of good taste which alone can satisfy.

A conference of the Manufacturers of Builders' Hardware, which included substantially all the manufacturers, has been held quite recently, and the situation carefully considered, the proceedings of the conference resulting in an agreement for the continued maintenance of present prices. It was noted with much interest by those present that this meeting was the first in the history of this large industry in which all the manufacturers were found so closely in accord, and their united action will undoubtedly have a wide influence on that of other Hardware manufacturers.

W. R. Walkley, of the Peck, Stow & Wilcox Co., New York, thought about two months ago that it would be possible for him to resign all connection with the company that he has been associated with for so many years, and accept the presidency of the newly organized H. D. Smith Co., Plantsville, Conn. But it has been difficult for the Peck, Stow & Wilcox Co. to consent entirely to this severing of a business relation extending over so many years, and he has been induced by the officials of that company to reconsider his resignation, so that he will undoubtedly occupy his old desk and be in touch with all his old friends "doing business at the old stand." His son, Winfield D. Walkley, formerly his right-hand man in the Peck, Stow & Wilcox Co., will occupy the New York office of the H. D. Smith Co. in the Postal Telegraph Building, he being the vice-president of that company. They have an extensive sample room, in which is exhibited their line of goods, which covers a large variety of carriage forgings, and a number of various kinds of special drop forgings.

W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

The effect upon the market that was apprehended through the unexpectedly pronounced change in the quotations on wire products was, fortunately, not one of a disorganizing character. While there is no doubt of the motives underlying the moving of such a large surplus stock, the belief is prevalent that when once this is effected a firmer market, qualified by a small advance at an early date, may safely be anticipated.

The general market is in quite a firm condition of strength, with few if any elements of weakness apparent. The bulk of the season's trade being already under way, the situation from the jobber's standpoint indicates less hesitation among buyers than was feared, a good, fair average selection of goods wanted, and an increased trade promised for the dull months ending the season, arising from the conservative buying which characterizes present purchases for immediate wants.

A feeling is noticeable among the leading jobbers that under a state of affairs which makes a change in price so radical as was noted in nails and barb wire, there should be some protection afforded those who rely upon the judgment of the mills to break the force of such a sweeping decline. It used to be a staple requirement in all large stock orders in the early days, when competition was rife, that the goods ordered should be protected against decline by the makers. At the present time, when one concern controls the making of quotations for the whole world virtually, it is more reasonable to feel this was the only honorable basis on which declines could be authorized. Distribution being made and agreed upon through jobbing facilities exclusively to reach the smaller trade, the orders given the mills should not be subject to a constant fear that a decline during the season may wipe out a season's profit.

But little doubt is felt by close observers of current conditions that a movement toward a lower range of prices is evident among the manufacturers controlling large lines of goods, and known as makers of a product of importance; not that stated declines accompanied by lower discount sheets are apprehended, but to abate the tendency to advance prices whether necessary or not, under the mistaken notion that the market needs bracing up to prevent slow buying, through fears of an early slump more general in its scope. Just at this time the most optimistic of manufacturers believe the buyers will cry a halt against any upward trend of prices, which, even where quotations have advanced but little if any would have the effect of deadening trade impulses and again making business dead slow.

Holding our export trade, as we do, in a manner calculated to make it possess an increasing importance, it has proved of great benefit in sustaining the general market, and giving the manufacturers food for reflection in the fact that a trade of so much vigor and such wide distribution, should never be neglected by any industry capable of creating conditions of industrial activity that may prove a safety-valve to a local weakness.

The Pillory of Public Opinion.

To the Wall Street end of the American Steel & Wire Co.'s plant our comments in this article are not intended to apply. Mr. Gates is before the courts at this writing, endeavoring through his able attorney to whistle down the wind the idea that anything published on April 17th as emanating from him was intended to affect the stock market in relation to the shares of the company with which he is so prominently identified, of which haling before the bar of justice he may be legally and technically proven not guilty.

What excites our special wonder is that the hardware trade is willing to make Mr. Gates a scapegoat for the loss, by decline in prices, on the stocks of the company's production that were in their hands when the recent big decline of nearly one-third was officially announced in order to move an unusually heavy surplus stock.

There was scarcely a single large buyer in the business but knew, even by his own purchases, that the entire trade was holding back orders on wire nails and barb wire especially, believing the quotations which inaugurated this year's business were unnecessarily high when made, and unwarranted by any possible inference.

For what were the buyers waiting except for a schedule of lower prices? Purchases were made only for immediate requirements; light stocks were carried; no great demand was stimulated on these staple lines; every one knew and felt they were abnormally high in price, and retail buyers were frankly told by the jobbers to buy light and stand from under.

Supplementing this knowledge on the hardware buyer's part came the strike among the rod mill men, when they were intimidated into accepting less than they demanded by the statement that a six-months' supply of wire products—say three hundred thousand tons of material—had already been accumulated, and the company if compelled to could hold out for that length of time.

With an announcement like that facing the buyers of the country, they had no occasion to wait until April 17th to know the company was overstocked, principally because a business of only 30 per cent. of its anticipated volume—and probably not as much as that on new orders—was all they had to justify a production of several millions a month, on which a million dollars a month profit has already been estimated.

Digitized by Google

When this factory condition of affairs was unofficially stated in an interview on April 17th, it may have been done with the motive of breaking the news gently that the time had arrived to make lower quotations, in order to work off that surplus stock. It would have been productive of no large specifications for delivery if, instead of a dollar decline, fifty cents had been considered sufficient; for the entire trade, feeling that the last two advances, then several months old, were unjustified, would have purchased no more freely than before.

This was admitted to be the case, so the drop in price was a noticeable one; the waiting market was turned into an active one, for, at quotations then established, prices were extremely low by comparison with the fairly firm quotations on raw material.

Each individual hardware dealer could so readily estimate his own loss by the decline that the company heard the protesting objurgations of all of them, and yet that very action by the company was what they had all been waiting for.

When the surplus stock has been reduced by the demands of the trade to a normal supply for current requirements, should no substantial reduction be made in the price of billets it would be a very natural expectation to note again the usual "15-cent" advances in quotations which were so gladly received a year ago by the trade generally, the profits attending which method of distribution through the jobbers ought not to be forgotten in the present state of affairs, when in the effort to obtain the customary orders belonging to this season of the year the company is crying to the trade: "Help me, Cassius, or I sink." As Wordsworth says: "Wisdom is often nearer when we stoop than when we soar."

The Jobber and The Nail and Wire Trust.

We have received the following article from one of our valued correspondents bearing upon the recent action governing the present nail trade conditions. In it is presented a view of the importance of being protected against decline, which should be considered by the jobbing trade generally.

Editor Hardware:—When the Nail and Wire Trust began operations they adopted the policy of distributing their product through the Hardware jobbing houses. At that time the 25c. differential on nails which they provided, made a ten per cent. margin of gross profit for the jobber; when prices rose to $3.20 base on nails the percentage was reduced to about seven and a half per cent.

Let us look at the service rendered by the jobber for this differential and see if he has any net profit remaining: He must move the goods from mill or railroad station to his warehouse; he must provide warehouse storage, labor for handling, and again move the goods to railroad station when sold. He must pay insurance, and must pay clerical labor for handling the thousands of small accounts of the buyers. He must have an investment of $15,000 to $50,000 for stock carried, according to the size of his business. He must take all the risk of slow collections and bad debts, and, worst of all, in view of what has so recently occurred, he must take the risk of a cut in prices by the maker without a moment's warning.

We do not think there is a jobber who knows anything of the cost of conducting his business who will claim a net profit on these goods under such conditions. It is no argument to say that the differential is larger than we used to get under old conditions; then we did not handle the bulk of the business as now, and although we did handle a good many nails, it was because the retailer expected it of us as a convenience and we submitted to it as a necessary part of the business. But when these items reach one-fourth or one-fifth part of our sales, it becomes us to make a deliberate calculation and see whether the manufacturer is not using us to perform a service for him which we are doing at a loss.

Whatever may be the opinion of the jobbers generally on this matter, there is one point upon which there will be unanimity, viz.: that they shall be protected against loss by reason of decline in price. The jobber must have this protection or he will decline to act as distributor. We should stand together in demanding this, and if it is refused we should allow the Wire & Nail Co. to distribute their product to the retailer themselves. We do not think it would take more than one year to bring them to a realizing sense of the value of the jobber's services and his right to such protection.

LOGAN-GREGG HARDWARE CO.

The Advancing Prices in Foreign Raw Materials.

Prices of the raw materials of foreign production used by American manufacturers continue to advance in the foreign markets from which these supplies are drawn. The Bureau of Statistics has for many years presented in its monthly and annual publications statements of the prices in foreign markets of the leading articles of manufacturers' materials imported. The prices of these articles are determined by the statement of the importer, who, in his invoice, names under oath the actual cost of the article at the foreign port whence it is shipped to the United States. The statements thus obtained indicate, therefore, the actual price in the foreign market unaffected by tariff charges at United States ports.

A study of the latest figures of the Treasury Bureau of Statistics shows a remarkable increase in the foreign price of many of the articles imported for use in manufacturing. In Manila hemp and sisal, the increase is more than 100 per cent. within the last two years; in jute, over 50 per cent; in India rubber, more than 25 per cent., and in tin, 50 per cent. During the nine months ending with March, 1900, the importation of Manila hemp amounted to 29,107 tons, valued at $4,266,580, while in the corresponding months ending with March, 1898, 39,599 tons were valued at but $2,449,468, the average price per ton in the nine months just ended being $146.50, against $61.85 in the corresponding months of 1898. In sisal grass, which is imported from Mexico, the increase has been even more strongly marked, the 52,875 tons imported in the nine months ending with March, 1900, being valued at $8,007,961, or $151.30 per ton, against an average of $62.42 per ton in the corresponding months of 1898. Jute, which averaged $23.65 per ton in the nine months ending with March, 1898, averaged $36.80 in the nine months ending with March, 1900.

The following table shows the average value in foreign countries of the articles named during the fiscal years 1897, 1898, 1899 and the nine months ending with March 31, 1900, as shown by the figures of the Treasury Bureau of Statistics, which are based, as above indicated, on the statements of importers of the cost of the goods in question at the foreign ports from which they are shipped to the United States:

	Fiscal year.		(Nine months.)	
	1897.	1898.	1899.	1900.
Articles.	Dollars.	Dollars.	Dollars.	Dollars.
Manila hemp, per ton	73.68	64.44	116.62	146.50
Sisal, per ton	60.60	74.59	128.12	151.30
India rubber, per pound	.491	.551	.62	.65
Tin in bars	.129	.1373	.1595	.269

An Exhibition in England of American Products.

Pitt & Scott, Limited, of No. 39 Broadway, New York, are the American representatives of a proposed commercial exhibition of American manufactures in London, for the inauguration of which they are distributing prospectuses. The design of the promoters is the bringing together of the foreign consumers and distributors and the American producers, the latter being relieved from all responsibility.

Digitized by Google

The exhibition is intended to be a permanent one, and it will be situated in the most central part of the city of London. The space allotted to manufacturers who participate will practically amount to their having a branch office and depot in London, which can be advertised as their London address, and to which they can refer all foreign inquirers who desire to see samples of their products.

The exhibition management will undertake to personally represent exhibitors, will take entire charge of their interests, answer all inquiries, and distribute their price-lists and printed matter, transmit orders, dispatch circulars, in short, render all or any service that would be given if the exhibitor had his own representative, giving the project his entire attention. A monthly bulletin will also be published, calling special attention to the exhibitors and their exhibits, which will be circulated among the principal importing houses and buyers of Europe, and special inducements will be offered to buyers to visit the depot and view the goods exhibited.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—On April 1st last my lease for five years of premises in the city of New York expired. I did not leave the premises on that day, and still occupy them, nothing having been said by the landlord as to new lease. I am now desirous of leaving the premises, but my landlord tells me he will sue me for a whole year's rent if I do so. Have I not the right to move by paying the rent due to date, without incurring any further liability?

REPLY.—If your landlord elects to regard you as a tenant for another year he has the legal right to do so. Where a tenant for years holds over after the expiration of his lease there is an implied renewal of the lease for the term of one year at the rent paid under the former lease. If you move, your landlord will have the right to sue you for one year's rent; you should have been out of the premises on April 1st if you did not intend to longer continue as a tenant of this landlord.

QUESTION.—I insured my wife's life in one of the prominent Life Insurance Companies in 1890, and I have paid the premiums regularly up to this time. About seven years ago my wife went abroad to see her parents and I believe was involved in a railroad accident. I never heard from her since the date of the accident, and I believe her to be dead. Should I continue paying the premiums? Please advise me what I should do.

REPLY.—We would advise you to pay the premiums until the full seven years are up since you last heard from your wife, unless you can prove her death before that time. We would advise you to gather all the proof you can which would tend to indicate that she had died and apply for letters of administration upon her estate if she left no will. If the letters of administration are issued, the decree would, in all probability be of great assistance to you in your collection of the policy.

QUESTION.—I should like to be informed what steps a man should take to make a legal will; also, is it necessary to have a notary public sign the will as a witness?

A will has been drawn for me, but I have not signed it, and am anxious to know how it should be done.

REPLY.—In order that a will may be admitted to probate in the State of New York, the following statutory requirements must be complied with: 1. It shall be subscribed by the testator at the end thereof. 2. Such subscription must be made by the testator in the presence of each of the attesting witnesses, or must be acknowledged by him to have been so made, to each of the attesting witnesses. 3. The testator at the time of making such subscription, or at the time of acknowledging the same, shall declare the instrument so subscribed to be his last will and testament.

There shall be at least two attesting witnesses, each of whom shall sign his name as a witness at the end of the will, at the request of the testator. We would advise you to have a lawyer present. These requirements are strictly enforced, and if not complied with the will is refused probate and the testator is considered to have died intestate, and his property so descends.

QUESTION.—I hold a demand note of $500, made by R. S. and dated April 1, 1892. Last week I saw R. S., and the conversation turned to this note, which he acknowledged he owed me, and stated he would pay. I do not expect him to keep his promise and should like to know whether I have waited too long to allow me to sue on the note? The parties live in New York.

REPLY.—The statute of limitations, which is six years in this State upon a promissory note, has run, and you would therefore have no standing in court unless you can revive the debt and take it out of the statute. If you can obtain from your debtor an acknowledgment of the debt, and a promise to pay the same *in writing*, the debt will be revived and you may proceed to collect the note. The oral acknowledgment and promise is not sufficient in the State to revive the debt, when the statute has once run. We would advise your writing to your debtor, and it is not impossible that you might secure the written acknowledgment and promise in his answer.

"Comstock's" Philosophy.

When the hardwareman stops to think about it, if he ever does, the position his business occupies among the vocations of trade must give him satisfaction. It has always been considered a desirable calling, and in the general estimation of the public, the hardware merchant and the banker stand upon an equal footing, both socially and commercially. There is a solidity about the business that is not confined to the goods, a freedom from undue risks and a general effect of giving and receiving full value in all transactions that can not but cause a favorable feeling toward the craft and those who have embarked in it.

I think that perhaps the quality of the goods handled has as much to do with the situation as any other one thing. It is not often that we find a really poor article in a hardware store, and the fact that the racket stores that have sprung into existence over the country generally have as a foundation line a grade of house furnishing hardware poorer than the ironmonger will sell is significant; so, too, is the fact that of the salesmen calling upon the hardware merchants the ones who have the greatest success are those who have the best goods and lay particular stress upon quality.

The recent meetings of hardware associations as chronicled by the trade journals furnish a student of trade ethics much food for thought. All sections of the country have been thus represented, and all the conditions under which the business is done have been fully and frankly treated, and I do not believe that any other branch of trade could pass through so public an exposure of methods and manners and show so sound a condition of things with so few bad trade practices. The hardware merchants and those who have dealings with them have reason to be proud of the state of affairs.—*"The Man in the Corner."*

Mrs. Weeperly—Yes, we pay spot cash for everything.

Mrs. Whipperly—Ah! I often speak to my husband about the time when we had to.—*Puck.*

"It isn't injurious to eat a clove once in a while, is it, doctor?"

"Well, that depends a great deal on the spirit with which you do it."—*Chicago Tribune.*

Our Expanding Exports.

The growth in exportation of manufactures continues to be the most striking feature of the marvelous export trade of the United States, which in the nine months ending with March, 1900, reached the unprecedented sum of $1,053,820,680, and thus promises to be fully one billion 300 million dollars in the fiscal year which ends sixty days hence. Of this large exportation, more than 30 per cent. was manufactures, against 26 per cent. in the corresponding months of the fiscal year 1899, and 23 per cent. during the same months of the fiscal year 1898. For the month of March alone the exports of manufactures amounted to $44,767,139, which is far greater than the total for any preceding month in our history, that of March, 1899, being $36,109,231; March, 1898, $28,214,540; March, 1897, $25,874,469, and for March, 1896, $19,125,725, the exports of manufactures in March, 1900, being thus more than double those of March, 1896, only four years earlier. For the nine months ending with March, 1900, exports of manufactures were $313,278,668, against $163,187,935 for the nine months ending with March, 1896, the total for the entire period having thus nearly doubled in that time. For the full fiscal year it now seems probable that the total exports of manufacturers will considerably exceed 400 million dollars, while the total for the fiscal year 1899 was $338,675,558; for 1897, $277,285,391, and for 1895 but $183,595,743.

This increase is found in almost every important line of manufactures. Scientific instruments show an increase in the nine months in question of from $3,071,758 to $4,750,474; fibre manufactures increased from $1,901,165 to $3,049,957; chemicals, from $7,959,318 to $9,674,760; paraffine, from $5,050,573 to $6,874,653; agricultural implements, from $6,632,538 to $9,663,787; leather and manufactures of, from $17,008,896 to $20,723,432; copper, from $26,644,957 to $40,598,399, and iron and steel, from $67,212,605 to $86,912,155. Thus iron and steel, despite the enormous advance in price and despite the prediction made when the increase began that this advance in price would reduce exportations, continue to head the list of manufactures exported and will surpass by more than 20 million dollars the enormous figures of last year, and show a total considerably greater than 100 million dollars for the year's export trade in that single line of manufacture.

The following table shows the value of the principal articles of domestic manufacture exported during nine months ending with March, 1898, 1899, and 1900, and includes all articles whose total export in the nine months ending with March, 1900, exceeds $1,000,000.

Exports of principal articles of domestic manufacture from the United States during nine months ending with March, 1898, 1899 and 1900:

Articles.	1898. Dollars.	1899. Dollars.	1900. Dollars.
Iron and steel	49,925,199	67,212,605	86,912,155

Brass	1,021,797	898,946	1,298,127

A tack points heavenward when it means most mischief. It has many human imitators.—*Tit-Bits.*

Questions Asked the Smithsonian.

One branch of work done by the Smithsonian Institution, Washington, is very little known, yet it is a very important one from the popular standpoint. This is the answering of questions from all over the United States, on every subject.

Fifty thousand letters are received a year, and none of them are neglected, if it is a question that can be answered. This is the only government which does such a thing.

Prof. Henry inaugurated the system in vogue some forty years ago. He was of the opinion that a well-informed man was a much better citizen than an ignorant one, and that it was his duty to impart information whenever requested, whenever such information was obtainable. Of course the questions are of a wonderful variety. For instance, when a New York *Sun* reporter called at the National Museum, he found Prof. Otis T. Mason engaged in finding a suitable name for a country seat for a lady in California. She wanted a name taken from some Indian language. This is only an example of the work done in this line, and sensible questions are always answered, even though they may seem trivial.

The Smithsonian Institution is of great benefit in the distribution of knowledge, its ramifications extending to all corners of the world. Scientists can send the results of their researches to the Smithsonian Institution in bulk, and they forward them to the persons whom they know to be especially interested in the book or pamphlet. This system of international exchange is, of course, extremely beneficial.—*Scientific American.*

New Electrical Power Plant.

F. E. Myers & Bro., Ashland, Ohio, have in contemplation the construction of an Electrical Wire Plant, made necessary by the rapid expansion of their present business beyond its greatest capacity. They have had plans prepared by the well-known firm of Benson & Potter, of Chicago, for one of the most extensive and complete electrical power plants in the country. These plans have been completed and submitted by Mr. Benson, who stands at the head of his profession. Upon their approval by the firm, bids were invited from the leading manufacturers in the line of goods wanted.

Representatives of nine houses have been here several days figuring on the plans, and this Wednesday morning the contract for the greater part of the work has been let. The Sprague Electrical Company, of New York, will furnish the electrical machinery. Worthington Co., of New York, the steam pumps, Aultman & Taylor Co., of Mansfield, the latest improved Babcock & Wilson boiler. The contract for the engine has not been let, but it will be a compound self-oiling machine, of the highest type of efficiency.

The contract for the building has not been let. The plant complete will be the best money can buy, quality and efficiency alone being considered in its construction. It will cost $25,000, and will be erected where Dr. Kinnaman's house now stands, its design being in harmony with the other buildings.

Paraguay just at present offers a fine market for agricultural machinery and implements, as the farmers are, with the help of the government, changing on a very large scale from their mainstay, cattle-raising, to agriculture, especially the raising of cereals. Steps are also to be taken to increase immigration. In order for our manufacturers to profit by this favorable situation, however, it will be necessary to dispatch well-trained commercial travelers, who have a knowledge of languages and business ability. It would be especially advantageous if the travelers were already on the spot with samples of machinery and implements before the arrival of the immigrants sent by the government, as the newcomers must immediately supply themselves with the necessary material.

Elements of Success in Business Life.

In a sketch of the active business career of John J. Tower, of Tower & Lyon, which appeared recently in the columns of a contemporary, we find the following moral maxims, which none who knew the author can doubt formed the foundation stones to his own honorable position in the industry where for many years he has been a shining light and example. A few direct admonitions that, rightly followed, will aid any man to do right in the many emergencies of business life. These are:

"Be true. Do not think to win success by unfair advantage, tricks or chicanery. Character is the best possible possession. Character commands success—it will win. It is an eternal law of the Divine economy. A strong off-shore wind may hold back the tide for one flood, but the tide is sure to come in.

"Be diligent—industrious. Let every hour show honest effort, directed by interested thought and energy, and every hour shall in the end bring its fair compensation in results achieved.

"Be patient—content to win by steady, if slow, accretion. This is the law of healthy growth. Very few win fortune in a day or a year. A hastily-won fortune is a hasty fortune, generally. Things are worth what they cost. An estate gained at little cost has little worth.

"Be alert—on the watch—always. Careful observation is the best avenue for acquiring practical knowledge for daily use. Acquire proficiency in the habit of observation and nothing worth acquiring will escape.

"Be content. Dissatisfaction and unrest in one's calling are as unfavorable for success as is dyspepsia for good digestion. A high ambition is laudable, in fact, essential to fine manhood or success in any career, but it does not co-exist with fickleness or changeable purpose.

"Cultivate friendships, but aim high; and do not be over modest about it. The noblest characters (the largest men) find satisfaction in being of service to their fellows. Seek to know and associate with such men. Such friendships are priceless possessions. 'Who would have friends must show himself friendly.'

"Do not make your business the end of living, but the means to the highest end. No man can afford to wear out his years for anything below the largest possible attainments. To follow a business career merely for the pleasurable excitement of its strife and competition, or for greed of gain, is to hold one's face to the grindstone, condemned to a narrow outlook and unworthy ideals. For men of earnest purpose and high ambitions, who realize that what we have is no part of what we are, who are ambitious to achieve the most of which they are capable in largeness of practical culture, beneficence of far-reaching influence and nobility of ultimate personal character, there is no department of life better calculated to discipline and test fine manhood, or that affords larger opportunities for its exercise, than an active commercial career."

The Canadian Preferential Tariff No Obstacle to Our Commercial Progress.

The announcement of a further increase in the Canadian preferential tariff in favor of the United Kingdom as against the United States and other parts of the world gives special interest to some official figures of the imports of Canada from the United Kingdom and the United States, respectively, during a term of years, which have just been issued by the Canadian Government and received by the Treasury Bureau of Statistics. The Canadian tariff, it will be remembered, was in 1897 so adjusted that the duty on articles entering Canada from the United Kingdom was made, beginning with April, 1897, 12 1-2 per cent. less than the rates from other parts of the world. On July 1, 1898, this reduction in duty in favor of the United Kingdom was increased to 25 per cent., and now it is announced that on July 1, 1900, the reduction will be increased to 33 1-3 per cent., or in other words, that articles imported from the United Kingdom and certain of her colonies will only be required to pay two-thirds of the rates on articles imported from the United States and from other parts of the world.

Up to this time the preferential rates made in favor of imports from the United Kingdom have not apparently had the effect of materially increasing imports from that country or of at all reducing those from the other countries adversely affected by this reduction. The Canadian official figures show that the imports from the United Kingdom in the fiscal year 1896, the last year under the rate which was uniform for all parts of the world, were 31.1 per cent. of the total importations, while those from the United States formed 50.8 per cent. of the total importations. In 1899, under the full effect of the 25 per cent. reduction in favor of the United Kingdom, imports from that country formed only 24.8 per cent. of the total imports of Canada, while those from the United States formed 59.2 per cent., the proportion of the total which was taken from the United Kingdom having thus materially fallen under the new preferential tariff, while the proportion taken from the United States had materially increased. The London *Economist* of March 31, 1900, commenting upon this subject, says:

"In the imports into Canada from this country (United Kingdom) there was last year an increase, as compared with 1896, of £816,00 or 12 1-2 per cent., whereas in the imports from the United States the increase amounted to £6,985,000, or close upon 64 1-2 per cent. Thus, notwithstanding the preferential tariff, the increase in imports from this country (United Kingdom) has been very much less than in the imports from the United States. It is necessary, however, in considering these figures to remember that the imports (into Canada) from the United States consist largely of raw materials for manufacture, which enter free of duty. These are, of course, unaffected by the preferential tariff, and they naturally tend to grow with the industrial progress of the Dominion. And even as regards manufactured articles, the geographical proximity of the States, and the fact that the American manufacturers are more in touch with the requirements and predilections of the Canadians, operate as an offset to the preferential tariff, and have hitherto prevented it from operating so much to the advantage of the country as was expected. Whether the still more favored treatment it (Canada) has decided to accord us (United Kingdom) will alter the state of things materially remains to be seen, but past experience warns us not to be too sanguine in our anticipations."

The following table, taken from "Trade and Commerce, 1899," an official publication of the Canadian Government, shows the total imports into Canada, and the amount from the United Kingdom and the United States, respectively, in each year from 1880 to 1899, and the percentage which the imports from those countries formed of the total importations of the year. It will be observed that the imports from the United Kingdom which in 1880 formed 48.4 per cent., were in 1899 but 24.8 per cent. of the total, while those from the United States which in 1880 formed 40.3 per cent., were in 1899 59.2 per cent. of the total.

IMPORTS INTO CANADA.

Year.	Total Imports, Dollars.	Imports from U. K., Dollars.	Per cent.	Imports from U. S., Dollars.	Per cent.
1880	69,900,542	33,764,439	48.4	28,193,783	40.3
1881	90,488,389	42,885,142	47.4	36,338,701	40.1
1882	111,145,184	50,356,268	45.3	47,062,935	42.3
1883	121,861,496	51,679,762	42.4	55,147,243	45.2
1884	105,972,978	41,925,121	39.5	49,785,888	46.9
1885	99,755,775	40,031,448	40.1	45,576,510	42.9
1886	95,992,137	39,033,006	40.6	42,819,651	44.7

THE PARIS EXPOSITION.

HON. FERDINAND W. PECK, COMMISSIONER GENERAL FOR THE UNITED STATES TO THE PARIS EXPOSITION OF 1900.

Hon. Ferdinand W. Peck, Commissioner General to the Paris Exposition of 1900, was born in Chicago in 1848, in the old Peck homestead, which was located in what is now the very heart of Chicago. He received the education of his early youth in his native city, graduating from the high school in the class of 1865. He completed his education at the Chicago University, and is now a trustee of the University of Chicago, which succeeded the former institution.

HON. F. W. PECK, COMMISSIONER GENERAL PARIS EXPOSITION, 1900.

Since his early manhood, Mr. Peck has been an interested participant in the activities which have made Chicago the marvel of the age. Born and reared in the city, growing up amid the stirring scenes and stupendous developments which have characterized its progress and imbued with the subtle influences peculiar to the environment, Mr. Peck's alert and receptive faculties absorbed the problems varied and many sided of his surroundings, which richly equipped him for the splendid enterprises which are the result of his efforts, and haev contributed so greatly to the beauty and advancement of the city, and will always remain monuments to his courage and his genius. Chief among these is the wonderful Auditorium Building, which Mr. Peck conceived and carried to completion. It is owned by a corporation, of which he is and always has been President, and the building contains the largest and most attractive opera house in the world. He was for four years a prominent member of the Board of Education of Chicago, and Vice-President of that body. His close identification with many public enterprises, local in their character, has not prevented his active participation in others wider in their scope and more general in their character. The Columbian Exposition, of which he was Vice-President, had among its official management none more ready and active than he in promoting its success. He was a member of the Commission to Europe, sent by the Government in behalf of the Columbian Exposition in 1891. The movement which culminated in the erection here of a splendid monument over the graves of Confederate soldiers, likewise found in him the earliest and most earnest supporter in Chicago. In other ways he has been connected with the large commercial and public movements of Chicago, and he stands before the world and in the minds of the people in the Western metropolis as one of its most representative and public-spirited citizens.

Digitized by Google

Mr. Peck is a man of wonderful energy and nothing within the range of human possibilities seems to daunt him when once he determines to act. He is exceedingly just and fair, with a charming personality. Democratic and sympathetic at heart, he abhors the idea of wealth as a distinction, and has been heard to say on many occasions that he respects infinitely more a man who attains position through merit than through riches alone.

He was not a candidate for the office of Commissioner-General, but was notified by President McKinley in July, 1898, that he had been selected for the position.

He has a happy family, consisting of a wife, four sons and two daughters.

Hon. B. D. Woodward, Assistant Commissioner-General of the United States Commission to the Paris Exposition of 1900, was appointed by President McKinley in August last, and confirmed by the United States Senate December 15, 1898. The appointment of Mr. Woodward to this important position has especial value to New York, as he is a resident of this city, and not only a graduate of Columbia University, but a Professor of Languages in that College. He is absent from Columbia University "on leave," and will not resume his professional duties there until after the close of the Paris Exposition in 1900.

Commissioner Woodward was born in 1868, and is, therefore, a young man, now about thirty-one years of age. He received his education, both in the United States and in France, and is one of the rare Americans who have obtained diplomas of Bachelor of Science and Bachelor of Letters at the University of Paris.

When he took his first degree at the Sorbonne he was only 17 years old, and his two diplomas for Letters and Philosophy were obtained in 1886 and 1891, when he was respectively 19 and 23 years of age. It was Commissioner Woodward who was instrumental in inducing M. Brunetiere to accept the invitation of several American universities to give a series of lectures in the United States.

Being an accomplished linguist and a master of the French language, Mr. Woodward will undoubtedly be of great service to this country at the coming great Universal Exposition.

The nomination of Mr. Woodward by President McKinley as Assistant Commissioner-General to the Paris Exposition has met with general approval. Commissioner Woodward has charge of the offices and affairs of the United States Commission in Paris.

♣

Americans especially will be proud of their country's display at this world's fair, in Paris, for the United States stands second only to France in number of exhibitors, which treble those of any foreign country. The following is a table of exhibitors; which speaks eloquently of American enterprise:

HON. B. D. WOODWARD, ASSISTANT COMMISSIONER GENERAL PARIS EXPOSITION, 1900.

France	30,000
United States	6,564
Belgium	2,500
Germany	2,000
Italy	2,000
Russia	1,500
Scandinavia	1,400
Austria	1,000
Great Britain	600
British colonies	600

♣

"He says his wife learned to sing in Paris."

"That may be. She certainly can't sing in Philadelphia."
—*Philadelphia Bulletin.*

ITEMS OF INTEREST FROM EVERYWHERE.

Freight traffic on the Lake Shore for the year 1899 was the largest in the history of the company.

Germany has 36 fewer bicycle factories than it had last year, and only a few of the largest establishments are making money.

Thirty-one American locomotives are ready for shipment from Philadelphia to China, with 200 tons of steel rails for Japan.

A contract made over the telephone is legal and binding, according to a decision recently rendered in a Pennsylvania lawsuit.

Among the Oriental languages the Arabic is the most copious, its vocabulary being even richer than that of the English language.

Literary Life says concerning modern dictionaries: English contains 260,000 words, German 80,000, Italian 35,000, French, 30,000 and Spanish 20,000.

Moscow has the largest hospital in Europe, with 7000 beds. There are 96 physicians and 900 nurses, and about 15,000 patients are taken care of every year.

Saddles with wire seats are by no means new, but a Birmingham concern which advertises one made of the "best German silver wire" is certainly ahead of its predecessors.

In his state clothes, including the crown, the Sultan of Johore, wears diamonds worth 2,400,000 pounds. His collar, his epaulets, his girdle and his cuffs sparkle with precious stones.

A remarkable trip of an ice breaking steamer on Lake Baikai, Siberia, is recorded as having been made February 10. The distnce of 80 miles through ice 31 inches thick was made in 12 hours.

A table prepared by the Indiana Bureau of Statistics shows that the average annual earnings of journeymen in that State in 1899 were $577.72, daily average, on a basis of 312 working days, of $1.86.

The Englishman possesses an amount of wealth on an average of $1,480, the Dutchman $720, the Belgian and German $780, the Austrian and Italian $500, the Russian $300. The Frenchman possesses $1300.

According to the American Iron & Steel Association, the production of iron and steel wire rods in this country in 1899 was 1,099,376 gross tons, against 1,071,683 tons in 1898 and 970,736 tons in 1897, showing an increase last year of 27,693 tons.

There are not many even of the remotest regions of the world where American bicycles do not penetrate. Here is the Arcade File Works, of Anderson, Ind., making shipments in one week to Constantinople and Tokio, Japan; while agencies have been established in Australia and Egypt.

The rails on the railroads of India have been gradually increased in weight. Those used on the Indian Southern Railway now weigh 75 pounds and those of the East Indian Railway 85 pounds. The length of the rails has been increased from 24 to 30 feet, and on one railway 40 feet.

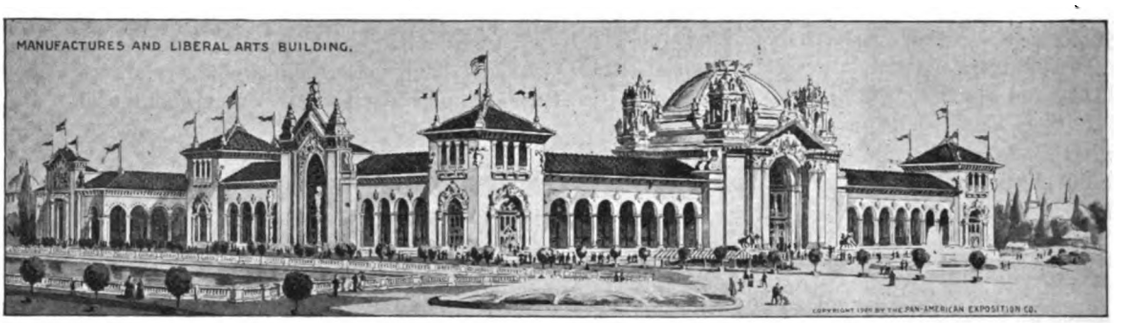
The United States will stand at the head of the coal producing countries of the world at the end of the current year if the estimated output of this year is realized. In the past 30 years Great Britain has not doubled her output, while that of the United States has increased almost seven fold in this time.

The American Commercial Sign Co. has been formed to take charge of the sign business of different breweries throughout the city. The company proposes to manage that particular department of breweries and distilleries by consolidation, thus effecting numerous economies. The capital is $35,000.

The Automobile Club of France some months ago appointed a committee to ascertain who was the real inventor of the automobile. The committee reports that M. Lenoir, who, on January 24, 1860, took out a patent for a motor, operated by the explosion of gas, is entitled to the honor. Lenoir, who is still alive and aged 78 years, was discovered in an obscure village. The Automobile Club is organizing a big fete in his honor, and will present to him a gold medal.

Bicycle retailers in India differ somewhat from retailers in this country. Bicycles, like everything else in India, are sold in booths at bazaars. The want of space and the absence of the speculative instinct that causes a retailer in this country to stock up a store with several hundred wheels, compels the Indian bicycle dealer to carry only two or three wheels in stock. Every morning the wholesaler makes the rounds of all the bicycle dealers in his town and takes orders for the wheels that the retailer will need during the day.

The rainless region of Peru is in five degrees south latitude, near the city of Payta and on the coast. It did rain for 24 hours in February, 1899, but this was the first rainfall in eight years, and the average duration between showers is seven years. Fogs are quite frequent, and the flora is poor, seven out of nine plants found being annuals. The seeds of the latter sometimes remain in the ground for seven years before germinating. The Peruvian cotton grows, as with its long roots it can go without water for seven years. It furnishes abundant and profitable crops and supports the people.



One of the novel features to be conspicuous in the operation of the Northern Pacific's new trains to the Pacific Coast, is a recent invention of a marvellous character, and will be placed in the cab of the locomotive hauling a train. It records every act of the engineer as to signaling with whistle or bell, and the minute and hour that they were performed; also the speed maintained at every minute, hour and day; the exact time that a train breaks in two, if such an accident occurs; the arrival, delay and departure from stations; how much time is occupied in switching at stations; how close any two freight trains follow one another; just when and where a train is flagged; every movement of brakes, with the time and place that they are applied and released, with the location at which a locomotive is at any minute in the week and the name of the engineer. The name of this device is the chronograph. It is being tested on the New York Central, and is designed to save railroad companies thousand of dollars in suits for damages by controverting statements as to the diligence of engineers and train crews in preventing accidents at crossings and in other ways.

THE PAN AMERICAN EXPOSITION, 1901

MANUFACTURES AND LIBERAL ARTS BUILDING FOR THE PAN-AMERICAN EXPOSITION.

The building to be devoted to Manufactures and Liberal Arts at the Pan-American Exposition in Buffalo next year is of the same general proportions as the Machinery and Transportation Building. These two splendid structures face each other across the Court of the Fountains, and are the largest buildings of the Exposition, each covering more than four acres. The western frontage of the Manufactures and Liberal Arts building, on the Court of the Fountains, is 350 feet, and on the Mall, at the north, it is 500 feet. The Agricultural Building is its nearest neighbor at the north, while on the east side is the Grand Canal, and beyond it the Live Stock displays. A bridge spans the Canal at the eastern entrance. On the south, one of the beautiful subordinate Courts, with fountains and floral displays, shrubs, lawns and other decorations, separates it from the Ethnology and Government buildings.

MANUFACTURES AND LIBERAL ARTS BUILDING.

An important feature of the work is a spacious central Court, 134 x 176 feet, containing a large pool where a fountain imparts an expression of life to the scene. About the pool are winding paths, richly bordered with flowers, plants and shrubbery, with here and there comfortable settees to invite the visitors to rest. Four broad aisles will lead from the four main entrances of the big building direct to the Court, where the fountain will form the central attraction and which may be seen from the several distant points.

The exterior of the building is strikingly graceful and beautiful. The style is a free treatment of the Spanish Renaissance with high vaulted loggias on all sides connecting corner pavilions with the four main entrances. A conspicuous and highly ornamental feature of the building is a high dome, flanked by four square open towers, over the southern or main entrance. The entrance, which is approached by broad steps between large groups of statuary, is a high arch with two tall columns on each side. Above the arch, elaborate high relief work enriches the broad gable. Statuary, symbolizing the various arts and industries, are placed in niches and at the angles of the several open towers above the entrance. All the entrances are of beautiful design and the broad, ornamental cornices, fancy flag standards and finials enhance the attractiveness of the general aspect. Color will be much used to give a certain air of gaiety to the dignified edifice.

The towers of the building may be reached by open spiral staircases. The dome is 70 feet in diameter, and the galleries which encircle it are so arranged that one may have a good view of the crowd and the general interior. The dome is larger in diameter by six feet than Santa Marie de la Salute, Venice, and contains a whispering gallery equal to St. Paul's in London. The ceiling is decorated with colors. The spiral staircase is 17 feet in diameter, like the stairs in the tower of St. Mark's, Venice, up which Napoleon rode his horse, or those in St. Peter's, Rome, by which you ascend to the dome and balcony.

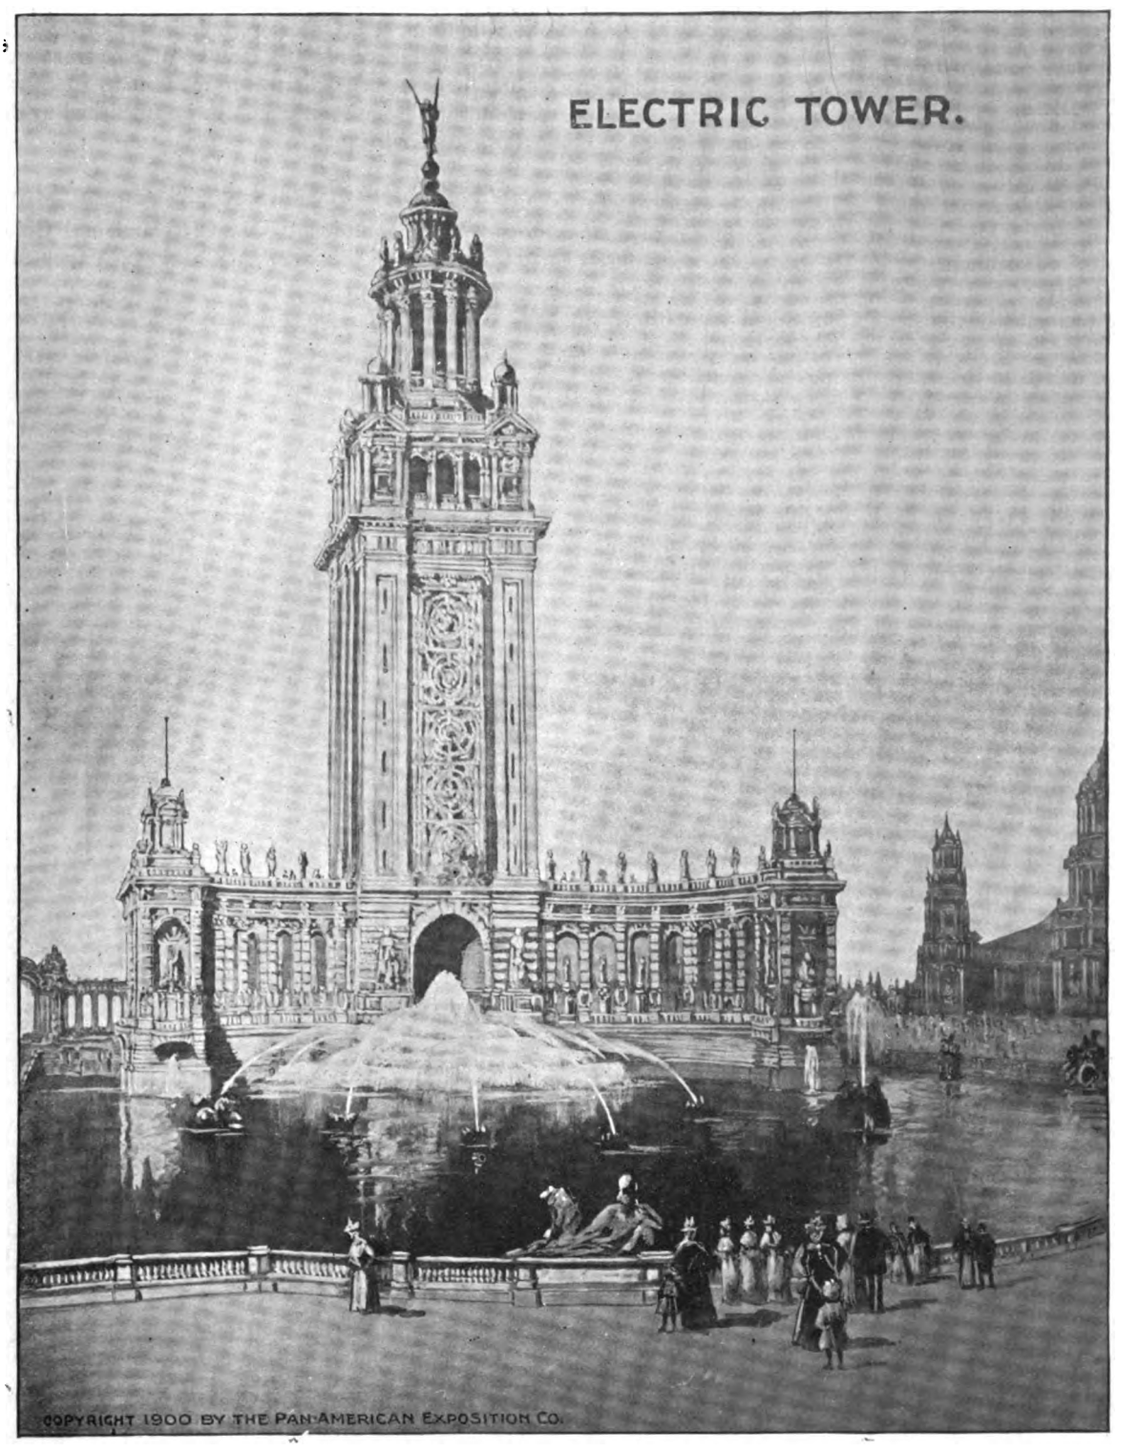
The building is lighted from the windows in the loggia and around the inner Court, and from skylights. The exterior of the buildings will be of staff with metal tile roofs. The architects are Shepley, Rutan & Coolidge, of Boston.

THE ELECTRIC TOWER.

The dignified and stately beauty of the great Electric Tower, which will form the conspicuous center-piece of the Pan-American Exposition at Buffalo next year, will command the rapt admiration of every visitor. The genius of the architect has been taxed to preserve lines and elements of beauty in a work of such tall proportions, but the problem has been well mastered.

The height of the tower is 348 feet above the surface of the broad basin in which it stands. Its position is between the Court of the Fountains and the Plaza, on the north side of the Mall. It looks down upon the Agricultural Building at the east, and the Electricity Building on the west. The Tower proper is flanked on the east and west by long curved colonnades, which sweep to the southward and terminate in airy pavilions, forming a semi-circular space 200 feet across. Within this space and in a high niche in the main body of the Tower are cascades, while all about the basin are leaping jets and countless playful figures, each with its spurt of water, combining to make a brilliant water scene. At the center of the niche is a tall geyser fountain, whose waters find their way from the high basin within the niche over successive ledges and among a multitude of vases to the level of the pool.

The main body of the Tower is eighty feet square. From the surface of the water to the top of the colonnades is seventy-five feet. This portion of the structure is enriched by a system of decorative rusticated bands, which give an aspect of great solidity to the base. The shaft of the Tower is treated with great simplicity. The center of each side is paneled with fantastically perforated work, through which is indistinctly revealed the massive framework of the Tower. This feature is calculated to produce a remarkable effect when lighted from within, as it is the intention to do. The main shaft of the Tower terminates in an elaborate entablature at the height of 200 feet. The crown of the Tower rests upon this entablature, and is composed of three stories of diminishing proportions and varying design. The lower of these stories is an arcaded loggia, rich in ornamentation



Digitized by Google

and having the wall surfaces brilliantly colored. Pavilionettes at the corners terminate in light fantastic cupolas. The second stage, or lantern of the Tower crown, is in the form of a high, circular colonnade, entirely open, so as to allow the effect of the sky to be seen between the columns. A spiral staircase within the colonnade leads to the last stage of the Tower, the cupola, over whose soaring dome is poised the superb figure of Electricity herself, thus dominating the entire Exposition, which owes so much to her generously exerted power.

From the water to the feet of the figure of Electricity is a vertical distance of 331 feet. The figure is seventeen feet in height.

The entrance to the Tower is across an ornamented bridge from the Plaza, on the north side. Elevators will carry passengers to the various floors, which will be devoted to different purposes of the Exposition, such as reception rooms, offices, restaurants, belvederes and amusement halls. A large restaurant, at a height of 200 feet, will give the diner a broad and beautiful view of the Exposition and the surrounding landscape. From the cupola the eye can sweep the whole Niagara frontier, and look far into Canada, beyond the majestic river that separates that country from the States.

Sculpture plays an important part in the decoration of the Tower. Two magnificent monumental groups of statuary flank each of the four sides of the base. Above the water niche in the southern face of the Tower is a magnificent escutcheon, representing the arms and seal of the United States. In the spandrels of the arch above the niche are sculptures in high relief. The pavilions and wings are also richly decorated with sculptures and other architectural devices. The entire exterior of the Tower will be studded with myriads of electric lights, so arranged that a great variety of effects can be secured. The use of electric lights in combination with the sparkling fountains and cascades will produce scenes of fantastic beauty.

ELECTRIC TOWER, PAN AMERICAN EXPOSITION.

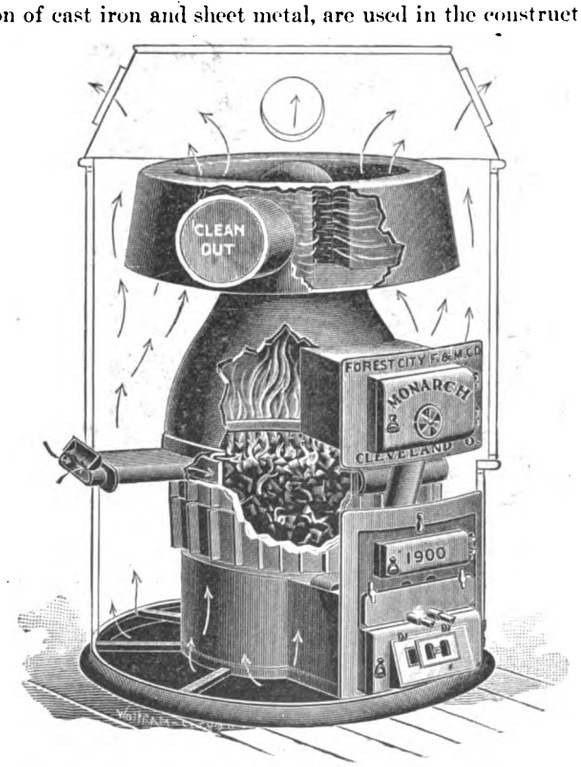
How it Feels to be Blown Up.

A miner in England, who was blown up while blasting a rock, describes his sensation thus:

"You see, it's so sudden. It's over just about the time you begin to understand that something is happening. You know, I had the satchel in my hand, and put it down. Then I got afraid of it. All at once everything was light. I don't think I saw the flash. Anyway, my face was not exactly towards the explosion. But then everything was light, lighter than day—kind of blinding.

"There was an awful crash. It was just at the same time. I was terrified and wanted to get away. It was just as if I was having the nightmare. Somehow, though, I knew just what the matter was. A man can think faster than he has any idea of. I knew that some of the others were nearer the explosion, and I said to myself, 'They're blown to bits, that's certain.' You understand, this was all in a second—all at once, really.



"Then it was exactly the same as if I had been hit with a stick. I thought it was a big stick, bigger than any man could swing, and that it must be worked by machinery. It hit me on the head and all over. I went sailing into the air a long, long way. My ears roared, and the wind blew into my face.

"I knew when I struck the ground, for I remember saying to myself, 'Well, I'm done for.' I don't know just when I lost my right senses or when they came back, but when they did come back it seemed queer that I was there still. I thought I had been thrown somewhere else. I could feel fire burning me. It was my clothes. They were smoking and almost blazing.

"I was bruised all over, and could not hear very well. My voice sounded as though somebody else were talking. That's all I can tell you about it."

The "Monarch" Furnace.

The Forest City Foundry & Mfg. Co., Cleveland, Ohio, are manufacturers of the "Monarch" furnace, all cast iron and with top return flue, an illustration of which we give in this column. No steel or sheet iron parts, or joints of a combination of cast iron and sheet metal, are used in the construction

of this furnace. The manufacturers adopted this method of construction when the "Monarch" furnace was first made, and it is at the present time a standard universally recognized, possessing no untried features. After adopting this type of construction, the next thought of the manufacturers was to make it heavy and with good, safe joints, having all the minor parts made as nearly perfect as possible. After four years' experience on the market the improvements that have been adopted during that time have been successful in every respect, so that to-day they feel they are fully equipped for all the conditions of an architect. It is marketed with the idea of being extremely moderate in price without the necessity of using anything of an inferior grade in any of its parts. Catalogues describing fully the method of construction and the various improvements that have made it so successful in its distribution through the trade will be furnished by the manufacturers upon request.

"Reliable" and "Process" Vapor Stoves.

Schneider & Trenkamp Co., Cleveland and Chicago, are manufacturers of the "Reliable" line of Vapor Stoves and

FIG. 1.—SINGLE GENERATOR VAPOR CABINET No. 18.

Ranges and Blue Flame Oil Cooks, which were mentioned in a review of their catalogue given in our issue of April 10. We illustrate herewith two of their leading styles, the first of which, Fig. 1, is their No. 18 Single Generator Vapor Cabinet, which is made with swing doors, has oven and broiler complete, and is extremely ornamental, with a nickel band around the top. In its construction it is made so that it generates for each burner through separate channels, and the failure of any one burner does not interfere in the least with the perfect running of balance of stove. Being provided with separate generating channels, the shutting off of any burner lessens proportionately the generating capacity of the generator, and the proportionate wasting of kerosene. The generator burner is cast solid and then drilled in order to avoid the danger of the presence of sand, which frequently causes trouble in a

Digitized by Google

cored generator. In Fig. 2 an illustration is given of their "Process" No. 8 vapor stove, which is recommended as being a desirable stove where the step attachment is not required.

FIG. 2.—PROCESS VAPOR STOVE No. 8

This line of stoves has included in its construction all the special improvements of the higher priced goods, including German silver needle points, making them practically incorrodible. The manufacturers report having established a large and popular sale for these goods, and excellent catalogues covering the entire line may be had upon request.

The Automobile of the Future.

It is time for some real artist to make a design that shall embody together with grace and beauty of line all of the conveniences that the horseless structure is capable of, and not in any degree suggest the ancient hippomobile as its predecessor. Among many of the conveniences which are possible in the new style the following may be mentioned as typical: Access by a door in front of the machine, instead of by the inconvenient side doors now in vogue, and necessitated by the fact that the horse is in front of the ordinary vehicle; lower steps and bodies, made possible by the smaller wheels which can be used with the automobile to the great convenience of the feminine half of the population; open fronts of clear glass for enclosed types of vehicles, so that the occupant can look directly ahead at the street and the passing scene without having to crane his neck sideways, as in the common cab on the street to-day. These are merely a few of the many great improvements looking to the comfort of the occupant that could be secured by abolishing once and for all any semblance in the electromobile to the design in vogue for horse vehicles.

Still, we are creatures of custom and convention. It took a mighty effort to rid the steam railway car of its semblance to the stage-coach of former days. Men still go around with buttons on the back of their coats to fasten up their skirts while riding, and they wear buttons on their sleeves to fasten back their cuffs while defending themselves with the sword, although horseback riding as a means of transit and sword play as a means of defense have disappeared from the face of the earth.—*Electrical Review.*

A Lecture on Glue by an Expert.

Glue greets you in your cradle, and bids you adieu in your coffin. I don't suppose a tenth of the people stop to think how variously glue serves them. It's in their hats and shoes, their carpets and furniture, their pencils, paper, pastry, confectionery and medicine, on their walls, in the stiffening of their apparel, and practically in or on some dozen of more articles with which they have daily dealings. Sixty million pounds of it are used a year, the cheapest at 9 cents, and the dearest, which is used in pharmacy and the confectionery trade, about 90 cents. Glue stock is very hard to get now, owing to a change in the practice of tanners since leather went up. Formerly they trimmed off the best hides about square, giving the glue manufacturers the entire coverings of legs, tail and head; but now they sacrifice only small pieces about the eyes and a little of the head. The result has been an advance since 1893 from $7.50 to $35 a ton for the wet glue stock, which caused an advance of about 50 per cent. in the manufactured article. The centre for manufacture of low-grade glue is Chicago, and for high-grade, Peabody, Mass. In the industries it is used almost universally. Alcohol, turpentine and coal-oil barrels have to be sized with it, and wooden boxes for merchandise, made of small pieces, are joined with it; while, of course it is used throughout the furniture trade. Only newspaper printing paper is made without some glue, and any paper that is to be written on with ink or present a smooth finish has to be treated with it at some stage in the manufacture.—*New Orleans Times-Democrat.*

What is said to be the most oddly decorated room in the world is the work of William Perkins, a Chicago man, who has utilized samples of wall paper in beautifying his smoking den. As described, there are over 3,000 scraps of paper on the walls and ceilings, which sounds as if the effect might be like a crazy patch pieced by a maniac. But each piece is cut with mathematical precision and the design is carried out so artistically in light and dark shades that the result is said to be exquisite as a mosaic. The piece de resistance is a superb eight-pointed star of gorgeous colors in the centre of the ceiling, while an elaborate border adds to the rich Orientalism of the apartment. The cost of this wonderful room was nothing, except weeks of labor, which taxed the strength and patience of the artist, for it was neck-breaking work, particularly on the ceiling, where the variation of a hair disturbed the general design. The paper was given a couple of coats of varnish and is good for 100 years.

The Willoughby Fork and Implement Co., of Willoughby, Ohio, expect to have the machinery all installed in their new plant before the end of this month. They have experienced the usual amount of trouble in getting their machinery delivered, but now have nearly all of it on the ground.

The new factory is located midway between the tracks of the L. S. and M. S. and "Nickle Plate" R.Rs., which at this point run about 600 feet apart, thus giving them excellent shipping facilities. The main building is a two-story brick, 50x150 feet, and is well arranged for the class of work for which it is intended. At the outset this firm will make a specialty of coal and coke forks, for which line of goods they have some new ideas which promise to make them very acceptable to the trade. Later they intend to manufacture a full line of forks for all purposes.

"Thurston Tompkins says he is in poverty through no fault of his own."

"How does he make that out?"

"Why, he says he was born with expensive tastes, but without sense enough to earn the money to keep up with them."—*Indianapolis Journal.*

Advertisers' Corner.

"Wear our pants!" exclaims a Brockton advertiser. Well, suppose we should, what would you wander around in?—*Plymouth Free Press.*

I know many firms, and individuals, who regard their advertising expenditures as money thrown away and, in hundreds of cases, they are right, but they have but themselves to blame.—*Machinery Advertising.*

"I don't see why you object to have your wife buy at department stores."

"You see, she does nothing but tell me about the bargains she gets; she won't talk of anything else."—*Ex.*

Some men simply put their money into any old kind of advertising and trust to luck for the rest. That's gambling. Others make a reasonable appropriation and then buy the kind of advertising best suited to their needs. That's business.—*Profitable Advertising.*

Friend—Why do you have such misspelled and ungrammatical signs in your front windows?

Sharp Tradesman—People think I'm a dunce and come in to swindle me. Trade's just booming.—*New York Weekly.*

Don't lean on anybody if you expect to accomplish anything in advertising. Get all the ideas you can from other people, but when it comes to running your business you've got to paddle your own canoe or you'll do no good.—*Penny Advertiser.*

Simpell—Funny thing about women. They often read the last page of a newspaper first.

Duplex—You see the big ads. are usually on the last page of a newspaper.

Foreman—What shall we do with the appendix to this piece?

Editor—Cut it out.—*Yale Record.*

The space is valuable according to what you put in it. Blank space won't sell bicycles. Space filled with a meaningless jumble of words might as well be blank. The more clearly, concisely, convincingly your story is told the more valuable you make your space. What you say in it makes it worth less or more than you pay for it.—*The Wheel.*

Matches are goods of common and extensive consumption, and yet they are seldom advertised in this country direct to the consumer. Here again, in a little thing, the Englishman takes the lead. Bryant & May, the well-known British matchmakers, are among the biggest general advertisers in Her Majesty's dominions, and have been so for years. Magazines, newspapers, painted signs and posters have all helped to make the firm name familiar throughout Great Britain.—*Exchange.*

When you have something to say, say it and be done. Force is either compressed or lost in words. The fewer words the more force, as a rule. Same way with ads. Don't say too much. Get at the essential points of your goods—those points that will attract interest. Then study the briefest possible expression for them. Sometimes you can express whole volumes in a picture. Use a picture. Perhaps a few terse sentences will tell the whole story. Set them in white space where they will be seen. Successful advertising is frequently the result of knowing what should remain unsaid. A good thing will get out and make friends, if it is properly introduced. No verbosity or bluster is needed.—*Advertising Experience.*

"Don't make the mistake of weighing advertising by what it costs.

"It is impossible to pay too much for advertising—if it pays.

"Nothing is cheaper than costly advertising that brings big, profitable returns.

"Nothing is more expensive than 'cheap' advertising that brings no results.

"If a newspaper charges you fifty cents a line, and every line brings you a dollar profit, you've got a regular Klondyke.

"If a newspaper charges you fifty cents a square foot, and you never hear from it, you are pouring money into a rat hole.

"Advertising is merchandise.

"Buy the kind you can make a profit on, no matter what it costs.

"Have nothing to do with the unprofitable kind, no matter how low the price is."

A good supplement is a scriptural quotation, which Solomon ought to have written: "If ye know these things, happy are ye if ye do them."—*Monetary Times.*

I never heard of a man who advertised thoroughly, carefully, persistently and regularly for a whole year that was not afterwards an advocate of advertising.

Advertise just as you eat—regularly and in a reasonable quantity. You don't wait until you are starved before you eat, but you go to your meals at a set time every day. One meal right after the other, year after year, makes you grow fat and keep well.

Advertise just as you drive a nail. Not one big blow and then stop forever, but with reasonable blows, one following the other. Even if your one blow is hard enough to drive the nail home, it is likely to go crooked or slip the plank and spoil your job.

Advertise just as the farmer plants corn—not a big sackful at one time, in one place and then stop; but a few grains at a time in regular order and in regular time.

In other words, advertise with business sense, just as you would do anything else. Keep at it week after week, month after month, and success will surely come by and by.—CHAS. F. JONES.

Put down the fleeting "good things" which occur to you as furnishing the basis of a good advertisement; or a catchy head-line; or a good design for "display;" or a happy phrase, which can be "worked in;" memorandum of special rates offered you for extra space or for an extended period; samples of good advertisements of your competitor, or as shown in the trade papers, or of other lines of business in the daily newspapers; suggestions made by essayists on the theory of advertising; and so on, through the whole range of this large subject.—*Keystone.*

Quite often an advertisement in one paper increases the pulling qualities of the same advertisement in another paper, because its re-reading revives and strengthens the impression previously made on the reader's mind; however, through the using of different numbers to key advertisements, an advertisement in one paper may weaken the force of the same advertisement in another paper. A person reads an advertisement in a certain paper. The advertisement convinces him that the article advertised is a pretty good thing and he makes up his mind to buy it at *some future time.* He makes a mental note of the address, "Box 100." A week or so passes. He reads the same advertisement in another paper and notes that the address in this paper is given as "Box 200." Not understanding the reason for this discrepancy, quite naturally he thinks that the advertiser is fishing for suckers, and as a consequence, the good effects produced by reading the advertisement in the first paper are entirely destroyed. To have made effective advertising, this discrepancy needed to be explained, and whatever in advertising needs to be, and is not explained, will nine times out of ten be wrongly interpreted.—TAYLOR Z. RICHEY.

RECENT TRADE PUBLICATIONS.

THE SIMMONS HARDWARE CO. St. Louis, Mo. Buyers' "Want Book," which is issued by this concern in addition to their large number of catalogues, prepared so that the daily wants of the buyer may be entered in their proper place to be attended to later. Every page of this handy book calls attention to some one of their several specialties, arranged in accordance with the season for which they may be required to serve as a reminder to the ordering man that these goods are kept by the concern that furnishes the book. They state in getting up this book they have followed the suggestions of a number of their customers, all practical Hardwaremen, as to form and contents, and without making it expensive or elaborate; they have also avoided filling a large part of the pages with advertisements, their principal intention being to have their representatives on the road received by the buyer with several pages of the necessary wants on which to found an order. A few pages at the end give the items of information connected with standard goods, such as nails, rope, wire, nuts, washers, bolts, etc. From the same company we have received a "Spring Goods catalogue," laid out to apply in their mail order department, and which is mailed generally throughout their territory to those apt to require the goods that are illustrated in its pages. They state: "The object of this catalogue is to group together those items that we carry in stock, that can be called Spring goods." This is not a very extravagant or expensive catalogue, but one that will be used around the store without any care being necessarily taken for its preservation.

ASHCROFT MFG. CO., Nos. 85-89 Liberty Street, New York, Catalogue covering their large line of manufactures, which includes the Ashcroft gauges, the Edson recording and alarm gauge, the Keyser automatic gauge, the Moscrop speed recorder, the Tabor steam engine indicator, and other specialties manufactured by this well-known concern. This is a cloth bound volume of 170 pages printed on good paper and well illustrated. Included in its contents, besides the gauges above enumerated, will be found pyrometers, revolution counters, marine clocks, vacuum gauges, rotary oil pumps, stocks and dies, and a large number of machinists' appliances that form the daily wants of the up-to-date engineer and machinist.

H. W. LUETKEMEYER & SONS, Cleveland, Ohio. Large size pamphlet catalogue, 100 pages, well illustrated, covering a line of Saddlery Hardware handled by this concern, and including in its contents almost everything in the Hardware line that could come under this head, including buckles and bits of every description, terrets and bolt hooks in large variety, gig and coupe trees, pad screws, cock-eyes, heel chains, wood and iron hames, horse collars, etc. Included in its contents will be found harnessmakers' tools of every description, needles and awl blades, horse blankets, whips, carriage trimmings, etc. This is a very complete and desirable catalogue to those in the Hardware trade handling any of these goods, as everything is fully illustrated and easily understood.

CUTTER, WOOD & STEVENS CO., Boston, Mass. Pamphlet catalogue, comprising 350 pages, including in its contents machinery for emery grinding, polishing and buffing; emery wheels, polishing and buffing wheels, emery, emery cloth, emery belts, polishing and buffing material, plating dynamos, volt meters, electroplaters' outfits, supplies and chemicals; shafting, hangers, pulleys and belting. It also includes a large line of machinists' and mechanics' tools and supplies, together with foundry equipments and supplies. This is a very handsomely printed catalogue on excellent paper, finely illustrated throughout, and remarkably complete in the lines above mentioned, and a very desirable one for the trade to possess.

PHILADELPHIA COMMERCIAL MUSEUM, No. 233 South Fourth Street, Philadelphia, Pa. A 32-page pamphlet has been issued by them, containing conversion tables of weights and measures and foreign moneys. The pamphlet represents a considerable amount of labor devoted to compiling the methods of converting foreign commercial units into those used by the United States, and vice versa. The pamphlet is published for free distribution among American manufacturers in furtherance of the work laid out by this institution, which is solely that of fostering American export trade. The Museum state that they realize that one of the first difficulties that confronts the American merchant in entering into trade with foreign countries is the diversity of weights and measures used by them. This pamphlet is intended to make a better acquaintance with them in comparison with the weights and measures of our own country, in order to make commercial transactions more readily accomplished, especially as the metric system is now used practically by the entire civilized world except Great Britain, Russia and the United States. On this account it occurred to the Museum that the pamphlet will be found extremely useful.

CHAMPION EVAPORATOR CO., Hudson, Ohio. Pamphlet catalogue of 24 pages, illustrating and describing the Champion Evaporator in regular and siphon patterns for maple, sorghum and fruit jellies. A complete description is given of these valuable appliances for the purpose named, and those interested in the industry will find it well worth preserving.

SHEFFIELD CAR CO., Three Rivers, Mich., Fairbanks, Morse & Co., Chicago, general sales agents. Pamphlet catalogue of 100 pages, a number of loose pages inserted, embodying recent additions, and covering a line of dumping cars, electric motor trucks, hand cars for section work, etc.; logging cars, push and plantation cars, shop trucks and transfer cars. Included in its contents is a line of velocipede cars of various sizes used for inspection purposes. There are but few concerns manufacturing this line of goods, which makes this catalogue a desirable one to write for by parties interested in the distribution of goods of this character.

ERICSSON TELEPHONE CO., No. 296 Broadway, New York. A leaflet of eight pages, comprising Part III of Vol. I of the Ericsson Series, which is a series of publications containing important telephone information, issued in parts at regular intervals in a convenient form for reference and future use. As these goods are stated to be rapidly becoming introduced throughout the trade, the information contained in these several booklets makes it well worth sending for in connection with the distribution of electrical supplies.

BRIDGEPORT GUN IMPLEMENT CO., Nos. 313-315 Broadway, New York. Pamphlet catalogue of golf goods, including in its large variety of goods named, balls, caddie bags, course supplies and general golf supplies. This is finely printed on coated paper, attractively illustrated, showing a number of clubhouses throughout the country, and positions of play, all well illustrated by excellent half-tones. The pamphlet contains revised elementary instruction to beginners, and is altogether extremely useful in connection with the sale of these goods by the retail trade.

NEW GOODS AND SPECIALTIES.

Extension Rink Roller Skates.

The Union Hardware Co., Torrington, Conn., represented in New York by Tower & Lyon, No. 95 Chambers Street, have just issued a small catalogue covering their new patterns of roller skates. These are an addition to their former popular patterns, and we illustrate herewith two of the styles referred to in this catalogue. They include in their construction all the latest improvements in material, designs and ideas that have made this skate so popular on the market. The tops, trucks, clamps and stampings are made of the best cold-rolled Swedish steel, insuring their fine appearance, and increasing their strength. The trucks are oscillating with best rubber cushions, and are enabled to turn in a three-foot circle. Fig. 1 shows the All-Clamp Extension Skate with plain bearings, and Fig. 2 shows the Half Clamp Extension Skate with ball bearings. These skates can be made to fit any shoe as small as 8 1-2 inches long and up to 11 1-2 inches for the all-clamp, Fig. 1, and 10 1-2 inches for the half clamp, Fig. 2. The adjustment is easily made and the parts are firmly held. The tops, trucks, clamps and stampings are made of the best cold-rolled Swedish steel. The rolls are made of Hemacite, a very hard and rough composition, black in color. The style seen in Fig. 1 is made in No. 9 bright finish, No. 9 1-2 nickel finish, and in Fig. 2, in No. 7 nickeled and No. 7 1-2 full polished and nickeled. In Fig. 2 is shown the roller skate for girls and ladies. The straps are russet grain leather, with nickeled buckles and trimmings. No. 10 is bright finish, No. 10 1-2 nickeled, both with plain bearings, as in Fig. 1. No. 8 is nickeled and No. 8 1-2 full polished and nickeled, both with ball bearings, as in Fig. 2. When renewing the rolls of the ball bearings skates the entire bearing is transferred bodily to the new roll.

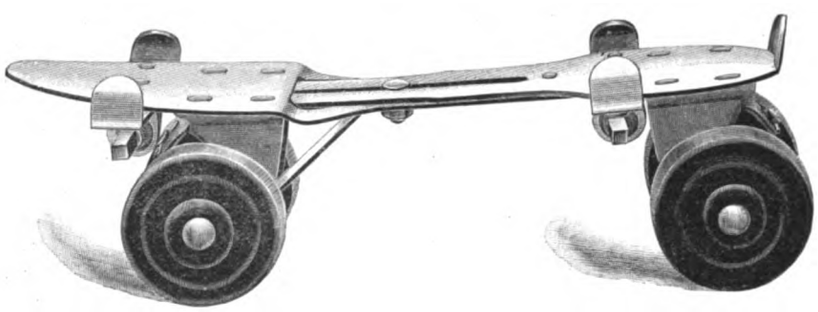

FIG. 1.—ALL CLAMP EXTENSION RINK ROLLER SKATE.

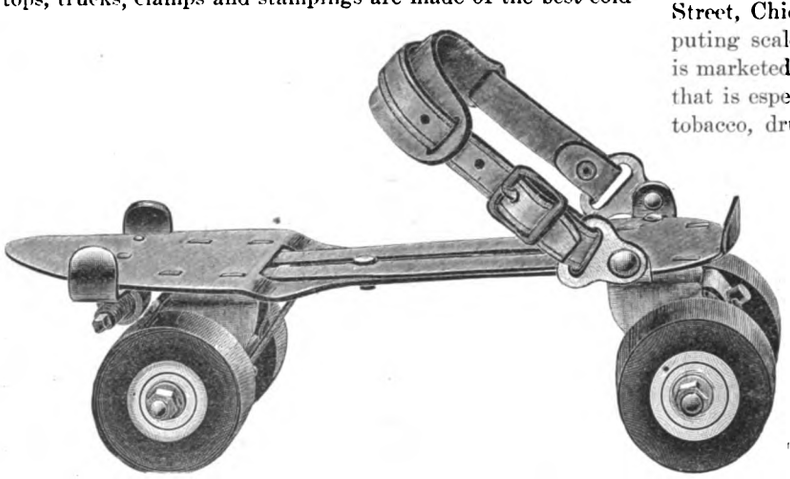

FIG. 2.—HALF CLAMP EXTENSION RINK ROLLER SKATE.

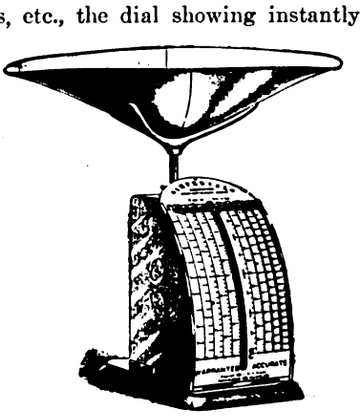
Torrent Rubber Bucket.



The Torrent Pump Co., Cleveland, Ohio, are placing upon the market an improved rubber bucket for use with chain pumps that possesses features that the manufacturers believe places it in the advance in a line of goods of this description. This bucket is provided with a heavy rubber cushion, overhanging the link, the link is so formed that it will never cut the rubber, which comes well out beyond the centre of the link, forming a good, pliable cushion, which always fills the tube, and at the same time allows the bucket to go through easily and with a minimum of strain. The edge being rounding gives a good wearing surface, and the rubber is not stripped off if it happens to be turned backward. The lower connection is very short, allowing the chain to bend close to the rubber, so that it will not strike the end of the tube on a slant. The manufacturers claim that nothing but the best quality of material is used in the manufacture of it, every effort being made to make it as perfect as possible.

THE TORRENT RUBBER BUCKET.

"Imperial" Computing Scale.

The Pelouze Scale & Mfg. Co., No. 133 South Clinton Street, Chicago, Ill., are manufacturing the improved computing scale, which we illustrate in this article, and which is marketed under the name of the "Imperial." It is a scale that is especially designed for weighing candies, teas, spices, tobacco, drugs, etc., the dial showing instantly the cost in cents to sixty cents per pound. It is intended to be used on the show case, being made extremely light for that purpose, and gives every indication of being an exceedingly attractive and ornamental appliance. It is constructed in a very compact form, occupying less space than any other scale that could be used for the same purpose. The dial being upright, can be read distinctly at a glance, and it is absolutely automatic, possessing no weights to lose. The scoop is nickel-plated, 6 x 11 inches in size. When boxed the entire scale weighs only 2 1-2 pounds.

"IMPERIAL" COMPUTING SCALE.

The Perfection Shoe Wiper.

Walsh & Many, No. 224 Champlain Street, Cleveland, Ohio, are manufacturnig the Perfection Shoe Wiper, an illustration of which is given (Fig. 1) in this article. It is designed by the aid of a simple and novel feature to thoroughly clean the soles, heels and sides of shoes, in order to prevent the carrying of the usual mud, etc., into the house, much to the disgust of the careful housekeeper. It is easily fastened to

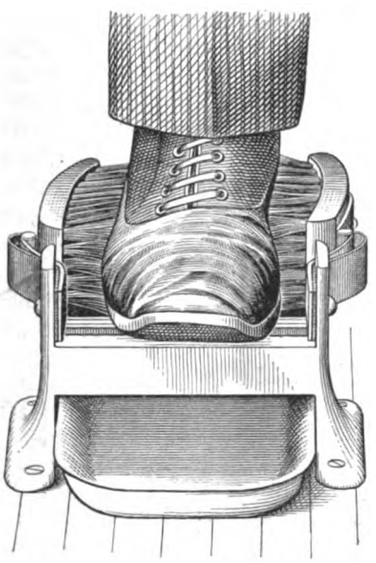

FIG. 1.—PERFECTION SHOE WIPER.

the step or door-sill or floor, and by simply placing the foot between the brushes, as shown in the illustration, and drawing your foot towards you, every particle of mud or dust is eliminated from the soles, heels or sides of the boot or shoe, the dirt thus removed falling into an iron tray which is provided in connection with the article, and which can be readily removed and emptied when necessary. This company among their numerous specialties also manufacture the Self-Feeding

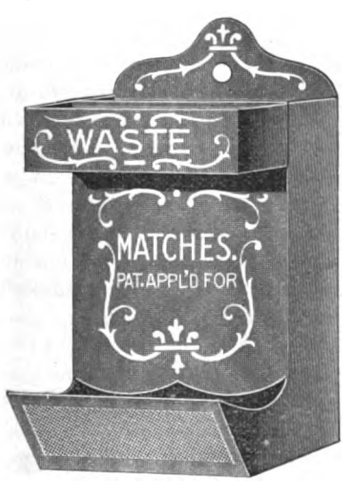

FIG. 2.—SELF FEEDING MATCH SAFE.

Match Safe, an illustration of which (Fig. 2) we give herewith, which is provided with a detachable waste box, and is altogether a very convenient receptacle for general household use. The directions require that the contents of the match box should be placed in the match safe, which immediately becomes self-feeding, and will feed the matches one at a time until the last match is taken out. They are designed to be marketed at a moderate price, and are worthy the attention of those searching for such novelties.

Marble Automatic Gaff Hook.

W. L. Marble, Gladstone, Mich., is manufacturing the Marble Automatic Gaff Hook, an illustration of which we give herewith. It is manufactured from high-grade tool steel, quite handsomely finished, and is sent ready for use. It is an article 36 inches long over all. The jaws, hooks, knurl and spring are manufactured from hardened steel, the handle being of hard wood, and the jaws having a spread of seven inches. It is set by slight push of the foot against the knurl pin in the centre, or it can be set by a pull against the edge of the seat or side of boat. When in use a straight thrust will

FIG 1. AUTOMATIC GAFF HOOK, CLOSED.

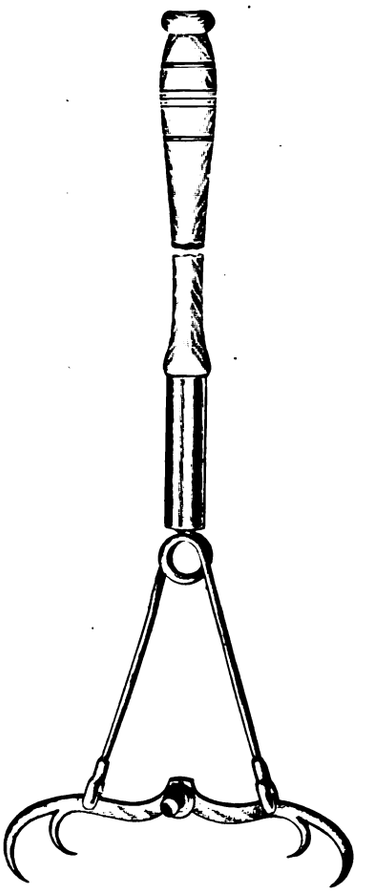

FIG. 2.—GAFF HOOK EXTENDED.

cause the arms to grip the fish at the very instant of touching them, and will capture anything in size from a half-pound bass up to a muskellonge weighing 40 to 50 pounds. Only one hand is required to use the hook. Should larger sizes be desired, they will be made to order.

The "Banner" Gas Lamp.

The Plume & Atwood Manufacturing Company, No. 29 Murray street, New York, are placing before the Hardware

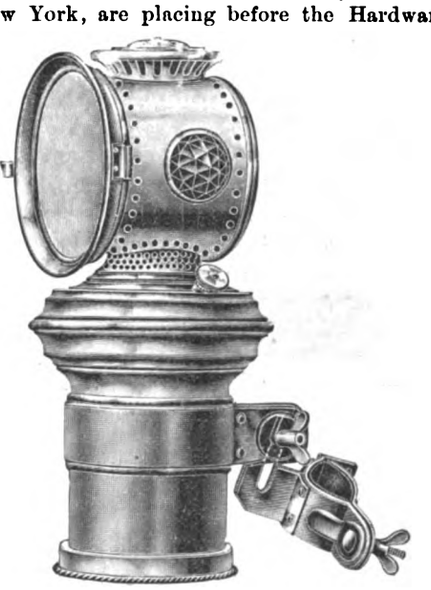

FIG. 1.

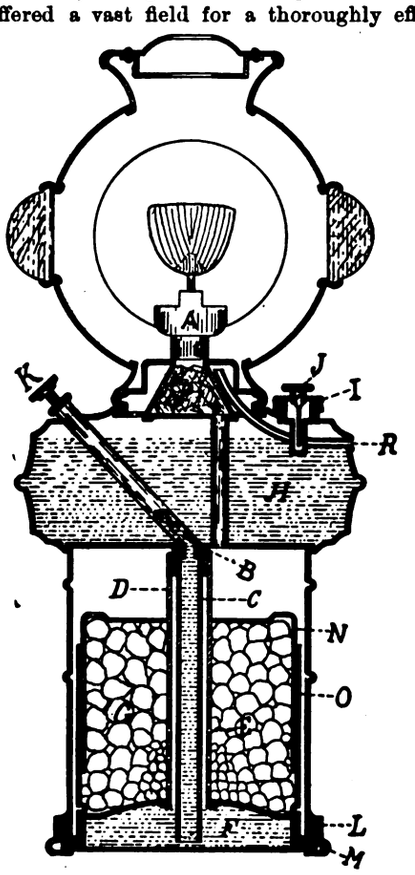
trade and dealers in bicycle sundries the "Banner" Acetylene Gas Lamp, which is designed for use on bicycles, carriages and automobiles, an illustration of which is given herewith. It is entirely self-operating under any and all conditions; it has a 3-inch lens, and a quarter of a foot fish-tail flame, is provided

Digitized by Google

with a dust-proof burner, and it is claimed by the manufacturers that it cannot be overloaded with carbide. It is self-controlled on all roads, whether smooth or rough, is provided with a patent bracket, which once adjusted is always adjusted, and no trouble is created in removing or replacing the lamp. When charged, the lamp is designed to burn four to six hours, according to the grade of carbide. The introduction, three years ago, of acetylene gas, with its powerful illuminating qualities, offered a vast field for a thoroughly efficient and



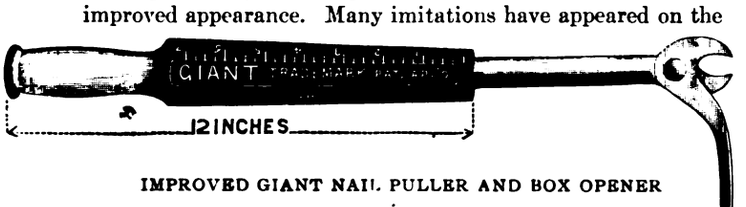


FIG 2.

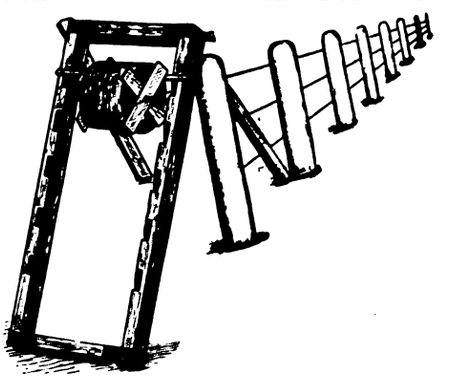
reliable gas lamp for bicycles, and this demand the manufacturers of the "Banner" Gas Lamp feel they fully supply. The internal mechanism of the entire lamp can be readily understood by reference to the sectional view which is given in Fig. 2, showing the principle and operation of the Banner Gas Lamp. K is the water valve, I the water filler, and R is the safety gas vent. G is the carbide chamber and F the equalizing chambers. Circulars, prices, etc., will be sent by the manufacturers on application.

Improved "Giant" Nail Puller

The Smith & Hemenway Co., No. 296 Broadway, New York, who are the legitimate successors of the Maltby-Henley Co., have greatly improved the well-known "Giant" Nail Puller and Box Opener, which has been one of their prominent specialties, and we give an illustration herewith of its improved appearance. Many imitations have appeared on the



IMPROVED GIANT NAIL PULLER AND BOX OPENER

market of the original article, which, as the manufacturers claim, is the best evidence in the world that the old "Giant" possesses the trade and everybody else is after it. The improvements in this well-known tool consist in its being provided with an octagon barrel, which prevents its rolling off a bench or box; giving it an enameled white handle, and indicating on the barrel a foot rule which will be found very convenient in measuring the size of a box or case where cubic measurements are desired for shipment. The sizes manufactured of this improved nail puller are Nos. 1, 1 1-2 and 2, weighing respectively 5, 4 and 3 pounds. The material in the jaws has been improved in quality and toughness, and every tool is accompanied by a tag guaranteeing the nail puller for one year from date of sale.

The Schmelz Barb Wire Fence Builder

Among the many new and economical devices designed for the construction of wire fence, one of the most original is shown in the illustration here given, being made by V. Schmelz, Sylvan Lake, Fla. The builder is referred to as made of strictly first-class all heart yellow pine, bolted together and well bound with iron straps. It weighs complete with rod and brace about 30 pounds. The frame is not painted, but varnished, it is explained, to show the quality of material. It is 5 1-2 feet by 22 inches in size, and is designed for fence up to 4 feet in height. In operation the frame is placed as shown in the cut, one side resting against the corner post, while the other is supported by the brace, which slips on a pin provided at either side of the frame. The bar is passed through the reel of wire and placed on the frame at the height desired to stretch the wire. The end of the wire is wrapped

THE BARB WIRE FENCE BUILDER.

around a hammer or a stick, which being held behind the operator, is carried to the end of the fence and fastened. The point is made that the wood bearings will not allow the wire to unreel too fast. To stretch the wire the slack is rewound on the spool, when the wire is laid to one side so as to wind on the bar, as shown in the cut, when two or three turns of the reel are given to stretch it. It is explained that the arms of a reel allow of enough leverage to enable one to break the wire, so it is possible to stretch it as tight as desired. The stick is placed across the arms of the reel, as shown in the cut, to hold the tension, and the wire is stapled to the posts. The manufacturer states that the frame obviates carrying the reel of wire, that it stretches it in the simplest manner without injuring the wire and in the shortest space of time, that there are no ratchets or mechanism to get out of order, that wire can often be put on posts in less time than it would take to cut a path wide enough for two men to carry a spool of wire for unreeling, that for long stretches with a pony hitched to the end of the wire and a boy to ride, an entire spool can be unwound in the worst of places; that the frame will be found convenient for taking wire from a fence and rewinding on a spool, the wire being wound evenly in this way and trash excluded; it is claimed the frame provides an excellent method of stretching wire over water.

♣

"My wantchee some yaller piecee English medicine; s'pose you puttee topside soft iron he velly quick makee he hard steel."

He was a Chinaman, and wanted yellow prussiate for steel hardening.

REVIEW OF THE MARKETS.

Hardware: While the general demand has been somewhat slackened by the current comment regarding lower prices being possible at an early day, still the sales in general are kept up without greater concession than would naturally occur under ordinary conditions. The force of the slump in prices on wire products, and the closing of so many mills indicating an overproduction, have not weakened general quotations very largely. The natural demands of current trade must be attended to; but stocking up to any great extent is not one of the prevailing features of the current business. Nails at the present prices are being purchased to a much greater extent than prevailed previously to the recent drop, and if the large surplus now held at the mills becomes reasonably reduced, a chance may yet be given for higher prices at an early date. While the market generally does not possess an encouraging briskness in its movements, there is no apprehension that a general decline will set in to jeopardize regular business; especially as the trade for the three months following the present is not usually the busiest in the year. The present tendency among manufacturers and jobbers is to keep prices fairly steady at recent quotations, make few radical concessions, and brace up the general consumption by avoiding unnecessary discussion that would create a misapprehension regarding the business of the fall season.

Wire Nails: The trade having recovered from the surprise attending the announcement of such unexpectedly low prices on this leading staple, are now purchasing freely at prices established. It is believed that after all, the slump will not prove an unmixed evil, for the effect upon the market will be that other manufacturers contemplating an advance in quotations will hesitate with good intentions before putting any such project into execution. Present quotations are as follows, f. o. b. Pittsburgh, terms 30 days or 1 per cent. off in 10 days:

To jobbers in carload lots	$2.20 base.
" in less than carload lots	2.22½ "
To retailers in carload lots	2.35 "
" in less than carload lots	2.45 "

New York prices in harmony with above quotations are held firmly at the following quotations:

To retailers, carloads on dock	$2.53 base.
" less than carloads on dock	2.66 "
Small lots from store	2.75 "

Cut Nails: At a meeting of the Eastern Cut Nail Mfgrs., held on April 26, the following revised quotations were established on Cut Nails, f. o. b. Pittsburgh, terms, 30 days, 1 per cent. off in ten days:

Carload lots	$2.05 base.
To jobbers in less than carload lots	2.10 "
To retailers in less than carload lots	2.20 "

The price for 1000 keg lots having been abrogated, the lowest quotation now named is for carload lots. The differential in price being materially lessened may have a tendency to affect the home demand, and would seem to indicate that Nails of either kind are quoted at prices that would be increased gladly at the earliest opportunity.

New York prices are quoted as follows, showing a corresponding reduction, based on above:

To jobbers in carload lots on dock	$2.23
" less than carloads on dock	2.28
To retailers in less than carload lots on dock	2.41
Small lots from store	2.50

Barb Wire: Although the Spring trade is well along for a full demand, the lower prices established on Barb Wire by the recent decline on wire products, has greatly increased sales throughout the country; as buyers had been largely holding back, believing the price previously current too high for any extended business. It will be remembered present quotations, in common with those for other wire products, are for immediate specifications and prompt shipments only, and subject to withdrawal without notice. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 30 days or 1 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.65
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.67½
" " Galvanized	2.82½
To retailers in carload lots, Painted	2.80
" " Galvanized	2.95
To retailers in less than carload lots, Painted	2.90
" " Galvanized	3.05

Ellwood and Baker Wire is 5 cents higher, and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices named above.

Plain Wire: The business done on Plain Wire since the recent reduction in price, has been of an extremely encouraging character; it is natural to believe this division of the company's production showed less of an overstock than those of Wire Nails and Barb Wire, and it would not surprise close observers if the first change in future prices should affect this staple line. The quotations for immediate specifications and prompt shipment, subject to withdrawal without notice, are as follows, f. o. b. Pittsburgh; terms, 30 days or 1 per cent. discount for cash in ten days:

	Plain.	Galvanized up to No. 14.
To jobbers in carload lots	$2.15 base.	$2.55 base.
" less than carload lots	2.17½ base.	2.57½ base.
To retailers in carload lots	2.30 base.	2.70 base.
" less than carload lots.	2.40 base.	2.80 base.

Galvanized Wire Nos. 15 and 16 is 75 cents advance on Plain, and Nos. 17 and 18 $1 advance on Plain.

Curry Combs: F. E. Kohler & Co., Canton, Ohio, announce the following current quotations to apply to their line of Curry Combs:

	Discount.
Wire shanks	30 %
Open backs	33⅓%
Closed backs	33⅓%
Shingle backs	35 %
Spring and Flexible Combs,	33⅓%
Shedder-Mane Combs	35 %

Terms, 30 days, or 2 per cent. 10 days from date of invoice.

Shelf Brackets: Atlas Mfg. Co., New Haven, Conn., announce the following as current quotations on the Bradley steel shelf brackets and wire hooks: Shelf brackets, full cases, 75 and 10 per cent. discount. Less quantity, 75 per cent. Coat and hat hooks, 45 per cent. discount; in lots of ten cases, 50 per cent.

Coil Chain: Revised prices per 100 pounds was made by the Standard Chain Co., Pittsburgh, April 25th. The prices given below are for cask lots, less than cask lots being 40 cents per 100 pounds more, and carload orders being 10 cents per 100 pounds less. The present prices for Proof Coil Chain in cask lots are accordingly as follows, f. o. b. Pittsburgh:

3-16	¼	5-16	⅜	7-16	½ in.
$8.50	$6.60	$5.60	$4.75	$4.60	$4.50 per 100 lbs.
9-16	⅝	11-16	¾	13-16	⅞ to 1 in.
$4.40	$4.30	$4.30	4.25	$4.25	$4.15 per 100 lbs.

B. B. Chain, 1¼ cents per pound advance over Proof Coil from 3-16 to 1 inch.

Crane Chain, 2¾ cents per pound advance over Proof Coil from 3-16 to 1 inch.

Twist Link, 3-16 to 7-16 inch, inclusive, add ¼ cent per pound.

Twist Link, over 7-16, special price.

Self-colored, short or long link, log chain, add ¼ cent per pound up to 7-16 inch.

Steel Tackle Blocks: H. D. Edwards & Co., Detroit, which is represented in New York City by Neal & Brinker, No. 18 Warren Street, announce the following current discounts on Steel Tackle Blocks of their make:

Hartz Steel Tackle Blocks, 50 and 10 per cent. discount.
"Eddy" Tackle Blocks, 60 and 10 to 70 per cent. according to quantity.

Lead Pipe, Sheet Lead, etc.: Tatham & Brothers, New

Digitized by Google

York, under date of May 8th, announce the following revised prices:

Lead pipe	6½ cents per pound.
Sheet lead	7½ " " "
Tin-lined lead pipe	12½ " " "

Trade discount remains without change.

Torrent Pump Co.: The following discount sheet applies to the catalogue recently issued by the Torrent Pump Co., having reference to their specialties:

	Price.
Purifying Pump, each	Net, $3.00
Chain for same, per foot	" .11
Torrent C. P. Curbs, each	" 1.50
Same, fitted for 2 inch tubing	" 1.60
Poplar Tubing, per 100 feet	" 4.50
2-inch Tubing, per 100 feet	" 5.00
Galvanized Iron Tubing, per 100 feet	" 7.00
Couplings for same, per pair	" .15
Galvanized Chain, per 100 pounds	" 6.00
Torrent Rubber Buckets	" 5.50
Victor Buckets, per 100	" 7.50
Cleveland Buckets, per 100	" 4.50
	Discount.
Torrent W. D.	50%
Roberts W. D.	50%
Wood Suction Pumps	50%

Acme Riveter, per dozen	" 4.50
Dreyer Spoke Repairer, per dozen	" .60
Roberts Chain, per 100 feet	" 5.50

Delivered, f. o. b., Miles Avenue Station.

Waterbury Brass Co.: Waterbury, Conn., and No. 60 Centre Street, New York, announce the following as current quotations on their line of goods, in lots of 100 pounds or more:

	Discount. Per Cent.
Roll and Sheet Brass	25
Platers' Metal, thinner than No. 38	30
Slitting Charges (brass)	25
Sawing Charges (brass	25
Jewelers' or Gold Metal	25
Printers' 2x4 sheets and galley sheets	25
High Brass Rods	25
Wire in Coils (No. 20 and coarser), excepting Copper Wire	25
Spooling Wire (brass)	25
German Silver Sheets and Rods	45
Platers' German Silver	25
German Silver Wire (No. 20 and coarser)	45
German Silver Resistance Wire	45
Spooling Wire (German silver)	45
Brazed Brass Tubing	40
Zinc Tubing	40
German Silver Tubing	40
Brass Mouldings	40
Door Rail	40
Brass Taper Tubes	40
Angle and Channel Brass	40
Iron Lined and Brazed Tubing	60

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels .....66 cents per gallon.
In lots of 5 barrels or more.... .....65 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

THE PHILADELPHIA TRADE.

We are glad to report the delightful Spring weather is having a marked effect on trade, and orders are much more numerous, although even now the weather is not so warm as might be expected at this season.

Almost all seasonable goods are in good demand, and the number of mail orders is quite encouraging. The action of the American Steel & Wire Co. while, perhaps, open to criticism, has brought wire nails and wire down to what appears to be, under present conditions, a more reasonable price, and the trade generally are showing their faith in present prices by placing liberal orders for these goods. It must be remembered that stocks throughout the country on these lines were far below the normal, and if the trade generally should decide to place their stocks in a normal condition, this alone would make an enormous demand, even although speculation was entirely left out.

During the past few days prices have been reaffirmed on such leading lines as screws and cast butts, while advances are still talked of by some manufacturers who have been slow in marking up their goods.

The announcement has just been made that steps have been taken to remove the competition on the manufacture of shovels, and there seems to be some talk of higher prices, which, however, we trust will not be made, as we think the trade generally recognize shovels are now as high as they should be.

Collections are but fair and there is some complaint that labor troubles are discouraging trade in some parts of the country, but so far our section has been luckily free from this trouble, except for the building strikes which went into effect in our city last week. BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

The action of the American Steel & Wire Co. is causing less of a stampede than was anticipated. Signs of recovery from the scare already appear. The advances of manufacturers caused by the advances in price of material and wages have been very conservative, and no serious decline will take place in the price of most of them until there is a material decline in pig iron and steel, of which there is at present little indication. It is disgraceful that for stock jobbing purposes such a serious shock should be given to business, but there may be danger in giving it too much attention.

It is difficult to anticipate any disaster to business with all the promises our condition furnishes. It is safe to believe that 1900 will be a good year for legitimate business, and that the last half of the year will be better than the first.

The country is too prosperous to be forced into a panic by Wall Street. Over-indebtedness, on which panics breed does not exist, and no financial muddle seems possible in the near future. Demand for goods for consumption continues, and purchasers are paying for them.—THE LOCKWOOD-TAYLOR HARDWARE CO.

THE SAGINAW TRADE.

Regarding conditon of trade in our territory, would say: While the reduction in price made by the American Steel & Wire Co. was expected to interest kindred lines to a considerable extent, we are glad to report that we are surprised to see how well trade has kept up, and how contingent lines have seemed to stand the shock. Trade for the past month has been considerably better than for the corresponding period last year. Although buyers quite generally seem to be purchasing for immediate requirements only, the volume of business is large, and prospects generally are for a prosperous condition of things. MORLEY BROTHERS.

THE CHICAGO TRADE.

We are glad to advise that, notwithstanding the recent flurry in nails and wire, our business during the past ten days or two weeks has kept up remarkably well. In fact, orders for our specialties and goods now in season are pouring on us in greater volume than at any time this Spring. While the "scare" among the retail Hardware dealers was doubtless very general, we feel that confidence is being restored, as prices on other goods are as firm as ever, and we confidently look for these to remain so for some time to come. The labor troubles still continue here in this city, which naturally have a demoralizing effect on mechanics' tools, and builders' Hardware particularly, but the outlook in the country generally is very promising.

WELLS & NELLEGAR CO.

THE COLUMBUS TRADE.

There is some complaining from customers in farming districts on account of the cold, dry weather. Farmers are behind with their work and discouraged. No doubt a few warm days and showers will put them in better spirits and they will begin to buy more freely. Nevertheless trade has been good all Spring, and goods are moving freely now. It is hard to get certain lines of goods, especially Wire Cloth, Refrigerators and Steel Goods. The reduction in price of wire and nails has increased the demand very materially, especially for wire. There has been a slight reduction in price of Screw and Strap Hinges, Harrow Teeth, Bar Iron and Steel Tire, but price on most lines remain the same as they have been since the first of the year. Collections are fair.

THE SMITH BROS. HARDWARE CO.

Digitized by Google

THE DAVENPORT TRADE.

With the return of pleasant weather, which arrived about thirty days later than usual this Spring, business has improved and is again fully up to normal, both in amount of invoice footings and tonnage.

Collections have not improved in the same proportion, and we are compelled to report them slow and unsatisfactory.

Prices remain firm on most lines, and are especially firm on nails and barbed wire.

Jobbers who thought it was so cute to cut the prices of the American Steel & Wire Co. on these goods have probably learned to their sorrow that that was a game two could play. We are surprised that the American Steel & Wire Co. stood it as long as they did, and think if it happens again the chances are that the jobber will be deprived of the small margin of profit he now enjoys.

Now, Mr. Jobber, will you be good?

SICKELS, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

Voluntary and highly complimentary remarks relating to what was termed "HARDWARE'S splendid achievement in April in the production of its superb tenth anniversary number," were heard by the correspondent this trip all along the trade line.

If it were not for the Cape Nome season, now wide open and making good business at this and other Pacific coast ports, it would be apt and proper to now denominate the local market as of the sagging and waiting order, incidental to the sudden lopping off of prices recently begun by the American Steel & Wire Co.

Builders' Hardware dealers report having felt the abrupt jar incidental to the sudden slow-down in the brisk movement that opened in this seasonable line a few weeks ago. And now these dealers readily mention names of more than a few they severally know who a few weeks ago had architectural drawings made for contemplated residences, and several business blocks, all of which propositions have been tabled under the belief that hundreds of dollars can be made within a short while by giving lumbermen and builders' Hardware manufacturers and jobbers a little time to trim down prices to an expected lower level.

Since closing "The San Francisco Trade" letter a fortnight ago, three prominent and highly respected members of the local fraternity have been removed from the activities of this life by death, namely:

The passing of George Webb Alexander occurred yesterday morning, April 30th, the physician's certificate naming Bright's disease as the cause. Deceased was the head of the incorporation, The Alexander-Yost Co., successors to Osborn & Alexander. He was a native of Brunswick, Me., 51 years of age, and a pioneer of the Pacific Coast. A widow and family survive.

On the evening of April 25 Andrew Smith Hallidie, president of The California Wire Works, succumbed to heart disease, having been ill since last December. Mr. Hallidie was sixty-four years old, a native of Dumfries, Scotland, and a Pacific coast pioneer. His widow and one married daughter survive him.

On the morning of April 19 George W. Manuel was taken with a hemorrhage of the stomach, which resulted in death the same morning. Mr. Manuel, who also was a coast pioneer, was born in Orleans county, Vt., and was 63 years of age. He accumulated a fortune as a Hardware merchant and dealer in agricultural machinery in Napa county, Cal. The widow, one son and two daughters are the surviving members of the family. TRADES PRESS ASSOCIATION.

Mistress—And remember, Mary; I never allow my girls to entertain their beaux in the kitchen.

New Servant—Very well, ma'am. What nights does your daughter use the parlor?—*Chicago News.*

Problem of Railroad Ties.

Several of the big Western and Southwestern railroads, it is said, are consulting with the United States Government's Department of Forestry with regard to the growing of timber on their non-utilized right of way. Among them are the Chicago, Milwaukee & St. Paul and the Atchison, Topeka & Santa Fe, and the governing officials of these systems realize that the supply of timber for the making of ties, poles and posts is becoming less each year. One of the questions that is perplexing and bothering the officers most is, Where shall we get our ties, poles and posts fifteen or twenty years from now?

The Department of Forestry is said to have taken a deep interest in the question of growing timber on the non-utilized rights of way, and it has expressed its willingness to give the railroads the benefit of its knowledge of tree-planting. Ties are more costly to the roads now than they ever before have been, and indications point to increase in prices annually. The carriers in the North and Central West are obliged to pay the highest prices for roadbed timber. John Findley Wallace, assistant second vice-president of the Illinois Central, Saturday said that the average price per tie to the roads in Northern Illinois was about 75 cents. This estimate was based upon the cost of transportation and all other conditions necessary to the delivery of the tie to the side of the track where it is placed.

White oak is the most desirable material for ties. This wood is grown in the middle South and the means of delivering it to the roads are quite difficult. In the marsh lands of the far South cypress is used the most. The average period of usefulness of a first-class white oak tie is ten years, and Mr. Wallace estimated that about 300 ties annually were required to keep each mile of track in the United States, Mexico and Canada in proper condition. There are about 200,000 miles of track in the three countries, and according to Mr. Wallace's way of figuring, 60,000,000 ties are required yearly to keep up repairs. Between 30,000,000 and 40,000,000 ties are used every twelvemonth in the construction of new tracks.

The renewal of ties is the most important item of expense in the maintenance of way. In the year beginning in June, 1897, the Illinois Central used 1,603,632 ties in repairing its tracks. The amount charged to the renewals was $535,778.16. From 1888 to the middle of last year that road spent about $4,250,000 for the renewal of ties.

Numerous kinds of inferior wood, such as hemlock and red oak, are being scientifically experimented upon by many of the roads. They are being subjected to chemical treatments that are said to lengthen the serviceableness of the wood.

In touching upon the subject of ties and the future provision of ties, Mr. Wallace had this to say:

"Ties are becoming more costly as the time goes by and the

Digitized by Google

securing of them is a very important thing to the roads. The great march of civilization and progress will not allow of the existence of the big forests of the land much longer. The time is coming when the roads will have to put to use those kinds of wood that now are not desirable for ties. The chemical treatments used for lengthening the life of the inferior qualities eventually may serve to solve the great question satisfactorily, but within the next twenty-five years I predict metallic ties will be necessary things. At this time metallic ties are undesirable chiefly because of the high price of the metal of which they are made."—*Chicago Record.*

What Is Horse-Power?

The original conception of the horse-power, says an English contemporary, based upon experiments of the performance of strong draft horses at the time when Boulton and Watt first recognized the necessity for a unit for large concentration of power, continues in use to the present day. It was found that 33,000 foot pounds per minute, or 550 per second, represented the capabilities of a good horse, and, though doubtless overestimated, this figure stands for the unit by which the engineer compares his engine with that of another. A foot pound represents the same amount of work regardless of the manner in which it is expended. A pound weight lifted through a foot, 1 pound of water caught in the bucket of a water wheel and descending 1 foot, the piston of a steam engine moving 1 foot against a resistance of 1 pound, are instances in which the expenditure of power is precisely the same. This does not imply equal horse-power for the motors, for they could only be rated the same if equal work was done in the same time. Thus, if the water wheel took 2 seconds to expend the foot pound, while the steam engine only took 1, the latter would have twice the rated power of the former—in other words, twice the power would be given out by the steam engine as that by the water wheel during the same period. For this reason, statements regarding the power of motors have no value unless accompanied by mention of the time taken to expend that power. If this is to be expressed in foot pounds per minute, it may readily be reduced to horse-power by dividing by 33,000; or, if in seconds, by 550, as the case may be.—*Metal Worker.*

At the recent annual meeting of the stockholders of the Joseph Dixon Crucible Company, the following directors were elected: Edward F. C. Young, John A. Walker, Daniel T. Hoag, Richard Butler, William Murray, Alexander T. McGill, Joseph D. Bedle. The balance sheet of December 31, 1899, was presented by the treasurer to the stockholders and approved by them. Statistics of sales were read by the secretary, and business matters pertaining to the company generally discussed. The methods of the management were approved by the stockholders, and the re-election of the old board was the result. After the stockholders' meeting, the directors organized and elected Edward F. C. Young, president; John A. Walker, vice-president and treasurer; George E. Long, secretary; and Joseph D. Bedle, counsel.

"Yes," said a man, after the nitroglycerine explosion had scattered the remains of the well-shooter over a large section of the petroleum region, "Doyle always was a cool one. I've seen him rattle over a stony road with a load of glycerine with no more care than if it had been a load of hay."

"Well," said the Coroner, sadly, as he thought of an escaped fee, "he may have been cool, but he never will be collected."—*Harlem Life.*

She—Do you believe that bleaching the hair will drive a person insane?

He—Sure thing. Why, I know two or three fellows who are crazy over bleached blondes.—*Indianapolis State Journal.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Chattanooga, Tenn.—The Thomas Bellows Co. has been incorporated. Hardware business. Capital $25,000. Incorporators: W. H. Lockwood, T. J. Lockwood, O. L. Lockwood, J. McGregor, P. S. Griffiths, all of Chattanooga.

Conneaut, Ohio—Andrew Brebner.

Dallas, Tex.—The Kenyon Hardware Co. has been incorporated. Capital $30,000. Incorporators: W. R. Kenyon, S. C. Randlett, H. C. Barlow, all of Dallas.

Danville, Va.—The Dan Valley Hardware Co. has been incorporated. Hardware business. Capital $25,000. Incorporators: A. D. Starling, W. R. Guerrant, R. H. Thomas, I. N. Dodson, P. D. Guerrant, all of Danville.

Elmore, Ohio.—Jaeger Hardware Co. has been incorporated. Hardware business. Capital $10,000. Incorporators: G. Jaeger, O. Georgie, E. Jaeger, Emma Georgie, Helen A. Jaeger.

Granby, Mo.—T. A. Miller.

Greenville, S. C.—A commission has been issued to N. A. Craig, William I. McBride and F. S. Evans, of Greenville, as corporators of the Greenville Hardware Co. The capital stock is to be $5000.

Hoytville, Ohio.—Squire Brook.

Jersey City, N. J.—The Bayner-Garner-Hines Co. has been incorporated to deal in Hardware and metals. Capital, $125,000. Incorporators: H. L. Baxter, M. L. Baxter, both of New York; F. W. Hunter, of Cranford, N. J.

Jonesboro, Tenn.—Boyd Bros.

Los Angeles, Cal.—The R. H. Herron Co. has been incorporated. Hardware and oil supply business. Capital $100,000. Incorporators: R. H. Herron, F. I. Herron, S. L. Graham, R. E. Small, T. D. Wood, all of Los Angeles.

Nelsonville, Ohio.—Novelty Hardware store.

Osceola, Ia.—E. F. Freeman.

Onondaga Valley, N. Y.—A. C. Muller.

Santa Paula, Cal.—The Petrolia Hardware & Supply Co. has been incorporated. Directors: R. A. Chandler, W. C. Hewitt, L. N. Andrews, C. O. Hewitt and I. P. Brown, of Santa Paula. Capital stock $12,000; fully subscribed.

Sulphur Springs, Ia.—James Campbell.

Wyndmere, N. D.—K. H. Robbin.

Changes and Improvements.

Almonte, Ont.—The Hardware business carried on here by G. A. Moir & Co. has been closed, Mr. Moir retiring.

Atlanta, Ga.—The Clarke Hardware Co. has sold out to the King Hardware Co.

Brownville, N. Y.—J. P. Knowlton has sold his Hardware business to Joseph Yot.

Buckley, Wash.—Bryant & Buell have dissolved partnership, A. M. Bryant purchasing J. L. Buell's share.

Calhoun, Mo.—A. F. Minish has sold his stock of groceries and Hardware to M. & Will Edwards. The firm will hereafter be known as Edwards & Edwards.

Cambridge, Mass.—P. H. Stratton has purchased the Whittier Hardware store.

Camden, Me.—M. C. Whitmore & Co. have fixed up the interior of their shop on Bay View Street. The building has been sheathed and fitted up with shelves, etc. They will keep a full stock of Hardware, paints, oils, nails, etc.

Canton, N. Y.—E. Jerome Woodford has bought the entire stock of Hardware of S. S. Surdam, and will take possession immediately.

Champaign, Ill.—The Bryant & McConney Hardware stock is being invoiced, and will be sold by the receiver, William Dallenbach, at private or public sale.

Crete, Neb.—M. E. Haight has sold his Hardware business to Frank and Ed Jelinek of Wilber.

Deposit, N. Y.—Several alterations and improvements are being made at the Hardware store of Wickwire & Russell. New flooring is being laid in what was heretofore the store room, and which will be made a part of the sales room or store proper, by the removal of the partition between the two rooms. The workshop will be on the second floor and the room now being used for that purpose will be converted into a store room. New shelving will be put in, and the interior of the building generally overhauled.

Haverhill, Mass.—A new front is being put in in J. H. Sayward's Hardware store on Washington Street.

Little Rock, Ark.—C. J. Lincoln & Co. have sold to the Fones Brothers Hardware Co. the twenty-five feet of land adjoining the property of the latter on the west at the foot of Main Street, being 25x125 feet.

Lowell, Mich.—L. K. Clark, of the Hardware firm of Clark & Spraker, has sold his share in the business to Eugene Cambell, and the new firm will continue in the business at the old stand, under the name of Spraker & Cambell.

Mandan, N. D.—W. B. Haight has had his new building refitted and new shelving put in preparatory to opening his Hardware store.

Millville, N. J.—Thomas Somers, our well-known Hardware dealer, has sold out his business to a gentleman from Philadelphia, who will increase the stock and continue business at the same store on North High Street.

Minneapolis, Minn.—C. H. Cleveland, formerly engaged in the Hardware business in this city, will open a general Hardware store at No. 508 West Lake Street.

Montrose, Pa.—W. D. B. and C. H. Ainey have sold the stock and good will of the Globe Hardware Co. to Billings & Ryan of Tunkhannock.

Port Arthur, Tex.—C. E. Smith has purchased the Rogers & Northcutt stock of Hardware, and is moving the same to his big double store at the corner of Sixth and Austin.

Potsdam, N. Y.—Frederick A. Weed and William R. Weed have purchased the interest of Howard P. Eastman in the Potsdam Hardware Co., and will hereafter conduct the business under the firm name of W. R. & F. A. Weed.

Rockland, Me.—J. P. Wise & Son have sold out their business, stoves, Hardware, etc.

Sault Ste. Marie, Mich.—The Gowan & Pickford Hardware firm will occupy the Adams Building, on Ashmun Street, recently vacated by McDonald & Campbell.

Sioux Falls, S. D.—The Hardware store on South Phillips Avenue, formerly known as the Stallman Hardware Co., will in the future be known as the Mullen Hardware Co., through the purchase of the establishment by F. C. Muller, of Madelia, Minn.

Business Embarrassments.

Quincy, Ill.—Benj. F. Jones, Hardware dealer, has made an assignment. Liabilities $3523.68, with no assets.

Shipshewana, Ind. — Warren Davis, Hardware dealer, has made an assignment. Liabilities $24,000; assets $6000.

Burglaries in Hardware Stores.

Boulder, Colo.—M. S. Whitely, $100.

Guthrie, Ky.—Mimms & Martin, cutlery.

Orion, Mich.—Belles Bros., $200.

Syracuse, N. Y.—Hollister E. Hessler, $500.

Water Valley, La.—Shipman Hardware Co., $350.

Fires in Hardware Stores.

Edinburgh, N. D.—The Hardware store of Jenson & Co. has been destroyed by fire. Loss $8000; insurance $3000.

Foxburg, Pa.—Dale's Hardware store has been destroyed by fire.

Haverhill, Mass.—The Hardware store of W. C. Lune has been damaged by fire; loss $300.

Logan, Kan.—The Hardware store of D. C. Dack & Son has been destroyed by fire. Loss $5500.

Maryville, Mo.—The Hardware store of Miller & Gaston has been destroyed by fire. Fully insured.

Oconee, Ill.—White's Hardware store has been destroyed by fire.

Ponca City, O. T.—Flower & Gott's Hardware store has been destroyed by fire.

Syracuse, N. Y.—The Hardware store of H. R. Olmstead & Son has been damaged by fire.

Three Oaks, Mich.—The large store building owned and occupied by Joshua Chatterson as a Hardware store, has been damaged $1000 by fire. Loss is covered by insurance.

Woodville, Miss.—The Hardware store of G. A. Wettlin has been destroyed by fire; loss $6000; $2000 insurance.

Arcade Files are the Best

I KNOW FOR I USE THEM

Our assertion that Arcade Files are the best is not a mere figure of speech intended to catch the eye. They really ARE the best—they cut faster, wear longer and represent a better value for the cost than any other file made; and are equal in every respect to the best English hand cut files—because they are made of the best steel that money will buy, and are finished with Weed's Patent Increment Cut, which produces a surface so exactly resembling the hand-cut work that no one can tell the two surfaces apart. If you have never used Arcade Files, send us a trial order, to be returned at our expense if not exactly as we claim. The best mechanics use them and prefer them to any other make for the reason that they cut faster and last longer than any other file on the market.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page News of new factories or companies, changes, improvements. etc, will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—The Plume & Atwood Co. General merchandise. Capital, $10,000. Incorporators: D. S. Plume, E. M. Burrall, both of Waterbury, Ct.; C. H. Tucker, R. H. Swayze, both of Bound Brook, N. J.; J. F. Daley of Brooklyn.

Chicago, Ill.—The Chicago Hinge & Washer Co. to manufacture plumbers' supplies. Capital, $5000. Incorporators: M. Singer, E. L. Hance, W. P. Knoche, all of Chicago.

Chicago, Ill.—The American Bolt Mfg. Co. has been incorporated. Capital stock $50,000. Incorporators, G. M. O'Connell, George Gillette, and Harry W. Hopp.

Columbus, O.—The Columbus Chain Co. has been organized, with a capital of $100,000, and a plant will be located at Columbus, O.

Columbus, O.—The Eagle Tool Co. of Cincinnati has been incorporated by R. B. Goodrich, O. C. Daugherty, E. M. Hall, M. M. Hagan and Attorney George W. Platt, with $50,000 capital stock. Messrs. Goodrich and Daugherty were connected with the Eagle Tool & Mfg. Co., Fifth and Elm Streets, and that concern will be absorbed by the new corporation. Reorganization will be effected within three weeks.

Kansas City, Mo.—The Guaranty Roofing Co. has been incorporated. Capital $10,000.

Minneapolis, Minn.—The Advance Thresher Co. and the J. I. Case Implement Co. have prepared plans for two magnificent buildings to be erected at Third Street and Seventh Avenue S, at a cost of about $200,000. Each building will be six stories with basement, having a frontage of 88 feet on Third Street and a depth of 125 feet on Seventh Avenue.

Newark, N. J.—The Ogden Manufacturing Co. has been incorporated to deal in Hardware specialties. Capital, $50,000. Incorporators: W. Dorsch, Jr., A. J. Hola, F. H. Ogden, all of Newark.

Nashville, Tenn.—A charter has been granted the L. E. Brevard Mfg. Co., of Carroll County, with $10,000 capital stock. The incorporators are L. E. Brevard, J. C. R. McCall, Neil Wright, J. B. Sanders, A. M. Lee and J. F. Leach. They will manufacture agricultural implements.

Ottawa, Ill.—The American Hardware Mfg. Co. has been incorporated; capital stock, $15,000; incorporators, Thomas J. Nertney, Miles W. O'Brien and James Nertney.

Portland, Me.—The Norcross Separator & Improved Churn Co. of New England has been organized for the purpose of manufacturing and dealing in churns, with $200,000 capital stock, of which nothing is paid in. The officers are: President, Clarence H. Dennis of Reading, Mass.; treasurer, John S. Richardson of Boston, Mass.

Quincy, Ill.—A new stove manufacturing company, known as the Sheridan Stove Co., has made application for a license to incorporate. The capital stock is $40,000. The company will manufacture cooking and heating stoves. This will give Quincy eight stove foundries, making it one of the stove manufacturing centers of the country.

Rockford, Ill.—Shaw & Kelly have purchased the plant of the Rockford Tool & Sundry Co., and will conduct a business under the name of the Union Polish & Nickle Plating Co.

Saco, Me.—The Quebec Mica Co. has been organized for the purpose of carrying on a general mining business, both in this and foreign countries, with $10,000 capital stock, of which nothing is paid in. The officers are: President, Joseph H. Means, of Saco; treasurer, Philip C. Tapley, of Saco.

Wilmington, Del.—The Royal Mfg. Co. of Scranton, Penn., has been incorporated to manufacture and sell mechanical appliances and hardware supplies; capital, $25,000.

Changes and Improvements.

Akron, O.—The plant of the Creedmore Cartridge Co. has been sold to the Alden Rubber Co. The consideration was $25,000.

Ansonia, Conn.—Israel A. Kelsey of New Haven has purchased the buckle business of the estate of the late James Graham, and has formed a joint stock corporation under the name of the American Buckle Co., with captial of $20,000.

Auburn, N. Y.—More room is needed to accommodate the growing business of another Auburn industry, and extensive additions will accordingly be made to the plant of the Ohio Tool Co. Besides the large addition to the factory proper, a large warehouse will be erected.

Bridgeport, Conn.—Architect Joseph W. Northrop has prepared plans for an addition to be made to the Bridgeport Brass Co.'s plant on Willard Street, adjoining their office. It will be three stories high, of brick.

Bellevue, Ohio.—The Ohio Cultivator Co. have bought out the Bellevue Plow Co. and the two industries will be combined.

Franklinville, N. Y.—W. Ensworth has sold his interest in the Ontario Cutlery Co. to W. McGill.

Fulton, N. Y.—The Miller & Tooley Knife Works is about to be established in the old Thayer carding mill in First Street, the business having so expanded that the former quarters were not adequate.

North Tarrytown, N. Y.—An addition, 40x80 feet in size, is being erected on the south side of the compressor department of the Rand Drill Works. John R. Rand has been elected president of the company to succeed his father, Addison Rand, who died recently. George Sampson has been chosen vice-president.

Nunda, N. Y.—The Woodworth Knife Works has been enlarged by an addition on the east end of the main building and most of the heavy machinery will be placed therein.

Oakland, Me.—The American Axe Tool Co. are building an addition on their scythe shops which will be adapted to strawing scythes that are to be shipped to Australia.

Plainville, Conn.—The Clark Caster Co. has filed in the office of the Secretary of State a notice of an increase in its capital stock from $15,000 to $18,000.

Picqua, O.—Work has been commenced on the foundation of the new addition to the Favorite Stove & Range Co.

Portsmouth, O.—The Ohio Stove foundry have completed a new addition to their factory, in the way of a complete engine and boiler room.

Rockford, O.—The Rockford Tool & Sundry Supply Co. has voluntarily retired from active business.

Sharon, Pa.—Work has been commenced on the erection of a $4,000,000 steel rod and wire nail mill for the Sharon Steel Co. The plant will run independent of the trusts, and will furnish employment to 3500 hands.

Torrington, Conn.—The Union Hardware Co. has increased its capital from $150,000 to $225,000.

Weir Village, Mass.—The Weir Stove Co. are building an addition to their works at Weir Village.

Worcester, Mass.—D. F. Dudley, Son & Co., shovel manufacturers of Sutton, are about to increase their plant by the erection of a large two-story powerhouse and machine shop.

Recent Embarrassments.

Atlanta, Ga.—The Southern Agricultural Works, a large farm implement manufacturing company of this city, has been placed in the hands of a receiver. George W. Parrott was named by Judge Newman of the United States District Court as receiver.

Louisville, Ky.—A receiver has been named for the Bowling Green Stove Co. on petition of the Columbia Trust Co., trustee for $135,000 bonds.

Recent Fires.

Philadelphia, Pa.—A fire of unknown origin in the Bonney Vise & Tool Co.'s shops, No. 3015 Chestnut Street, has done damage to the extent of $150.

Miscellaneous.

Williamsport, Pa.—The stockholders of the Williamsport Iron & Nail Co. held their annual meeting in this city recently and elected the following directors: C. La Rue Munson and John M. Young, of this city; Hon. H. R. Curtin, of Roland, Pa., and William A. Schreyer and John Jenkins, of Milton.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, $30.00; Full Nickel, $42.00.

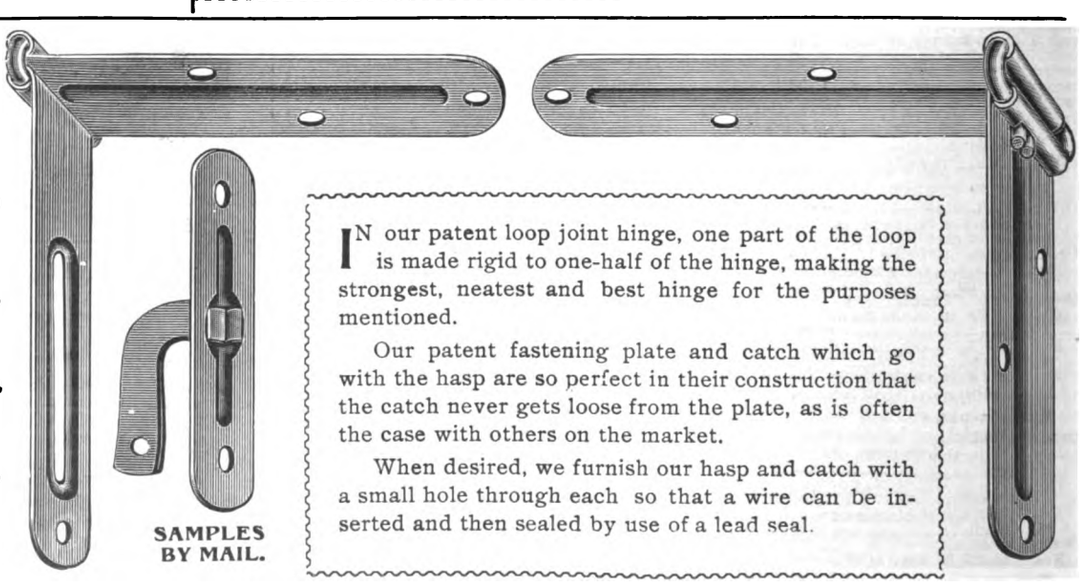
THE BEST FENCE.



The best fence for farm and poultry purposes . . Also Gates and Lawn Fencing.
Get our prices and Catalogue. . . .

DETROIT FENCE CO.,
Box A, 18 Atwater St E., DETROIT, MICH.

CARY'S PATENT
HINGE
AND
HASP

Designed Especially for
Fruit Crates, Milk, Egg, Cracker and other styles of Boxes, requiring a hinged cover.

CARY MFG. CO.,
19-21 Roosevelt St.,
NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each so that a wire can be inserted and then sealed by use of a lead seal.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket. **FOLDING PAPER BOX CO., South Bend, Ind.**

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [*General Hardware*]: Enclosed please find $2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

THE

ELECTRIC DROP STEEL FENCE RATCHET.

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

1st. It is simplest.
2nd. It is the lightest and strongest.
3rd. It is the most compact and rigid; no loose parts.
4th. Will tighten any length of wire desired.
5th. Adjustable to expansion and contraction.
6th. Can be attached to any point on the wire.
7th. It will tighten the wire uniformly because it draws equally from each way.
8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
9th. Can be used on any kind of post, either wood or iron.
10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
11th. When wire becomes loose or sags from use, it can be instantly tightened.
12th. No special wrench required; any wrench on the farm will operate it.
13th. The most important feature; it can be bought for Less Money than any other good ratchet on the market.

MANUFACTURED BY

Electric Oil Stove Co., JACKSON, MICH.

FACTORIES AT HOMER, MICH.

Eclipse Cleanable Refrigerator.

"A MERITORIOUS SPECIALTY."

The only removable ice chamber refrigerator in which the cold dry air is taken to the lowest point in the provision room, through a removable flue, thus creating a positive circulation.

The upward current of air through the provision chamber is so swift that moisture and odors are quickly forced to the ice, the proper condenser and purifier.

The interior is all metal and all parts accessible for cleaning. Has an exceptionally large ice chamber.

Made in attractive plain and ornamental finishes, neat and attractive designs and excellent workmanship.

IT IS NOT A CHEAP REFRIGERATOR.

Eclipse Refrigerator Works, Burlington, Vermont.

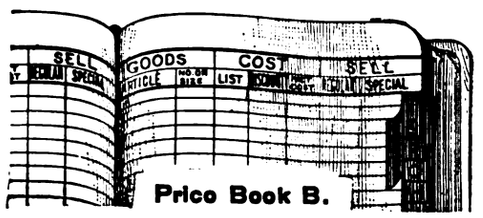
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



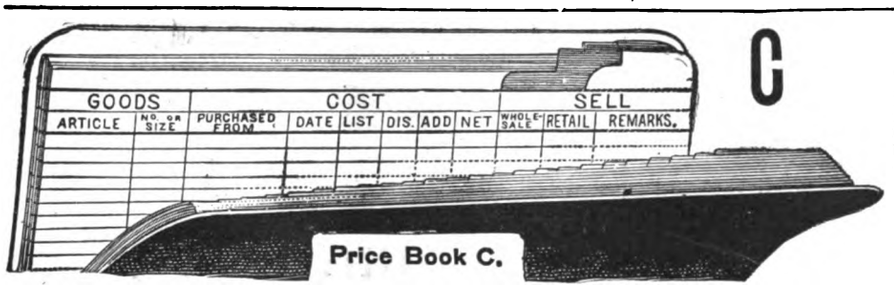
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

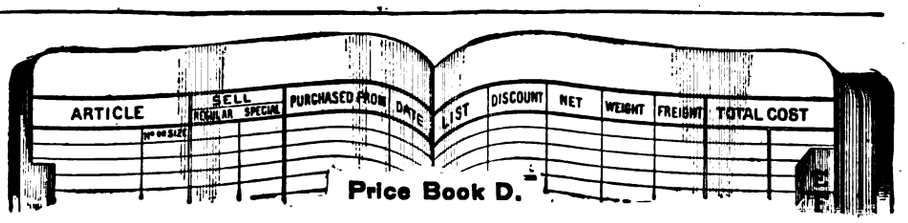
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

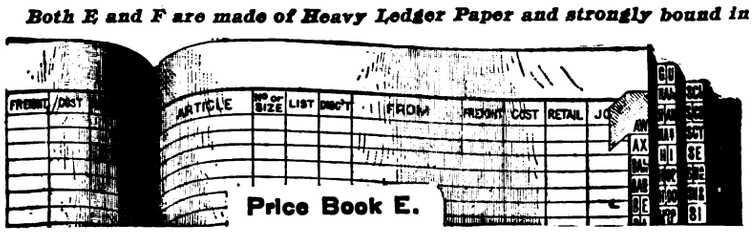
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to	AU	For Chisels,	turn to	CHI	For Iron,	turn to IRO
" Parers, Apple	"	PAR	" Cutlery,	"	CUT	" Irons,	" IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

APPLE PARERS.

You want the best for your money, the Parer that will give your customer the best satisfaction, a Parer that is attractive in appearance, right in principle, thoroughly constructed and salable at a reasonable price,

An Apple Parer With a Reputation.

We make Apple Parers suitable in capacity, principle and price for all requirements. We want to give you the benefit of our *36* years' experience which enables us to make better machines for less money than our competitors.

The machine here illustrated is our *"'98" Turn Table Apple Parer,* a strong, simple, practical, novel family parer which pares and pushes off the apple. It has been in the market two years only, but long enough to establish an enviable reputation with the trade and consumers. We make lower and higher priced machines for hand and power.

HARDWARE

The National Association of Manufacturers have removed their New York office from 149 Broadway to 100 William Street, Room 308, Marshall Cushing succeeding Edward B. Lent as manager of the office. A large number of the members of the Association will find the new location exceedingly convenient of access, and the new manager, Mr. Cushing, extends a cordial welcome, urging the members to make every possible use of the facilities provided whenever it may suit their convenience. Mr. Cushing takes entire charge of the work of the Association in this city, and the kind consideration and hearty co-operation of the members is earnestly solicited.

C. K. Turner & Son, 76 Broad Street, New York, the well known firm of exporters, have been appointed exclusive export agents by the C. T. Ham Mfg. Co., Rochester, N. Y., for their production of tubular lanterns and railroad lamps. A complete stock of this popular line of goods will be carried by them in New York, for immediate delivery and convenience of the trade. They have also been made the sole export agents for the Horton Mfg. Co., Bristol, Conn., manufacturers of fishing rods and other similar appliances for the use of the angler.

A. G. Sherman, 14 Warren Street, New York, is the New York representative for the Indiana Edge Tool Co., Gas City, Ind., manufacturers of edge tools of an agricultural character, to which has been added a line of scythes, which, being made "outside of the combination," has been well looked after by the few buyers who were posted. Mr. Sherman's representation covers the Middle and Eastern States, and also all demands for export.

Charles S. Lawrence, well known to the Hardware trade from his long connection with the house of W. B. Fox & Bro., previous to 1896, has again taken up the reins to aid in the distribution of meritorious Hardware products, and connected himself with the old house of Tower & Lyon, No. 95 Chambers Street, as their representative "around town" in Greater New York and vicinity. Mr. Lawrence is a progressive worker. and with a line of goods of such importance to influence trade, cannot do otherwise than renew his past triumphs and do justice to his present opportunities.

Goulds Mfg. Co., of Seneca Falls, N. Y., are building another entire plant. On a 10-acre plot of ground they are erecting buildings of brick and iron, which will, when completed, cover over three acres. The new plant will be used to manufacture power pumps, and will be complete from foundry to shipping room. Power used will be electricity generated in their old plant, which will be continued in operation on their other lines of pumps. It is anticipated the new shops will be completed about July 1st.

McLaughlin, Green & Co. have commenced business as contractors, plumbers and gasfitters at 291 Fulton Street, Jamaica, N. Y. It is their intention to carry a complete stock of Hardware suitable to the wants of the community in which they have opened up business. Paints and oils and plumbers' and gasfitters' supplies will also form part of their extensive stock. They request that manufacturers in above lines of trade will forward their catalogues and discount sheets, with a view of adding other lines of wares than those originally contemplated.

The Despatch Brass Hardware & Rolling Mill Co., Despatch, N. Y., have been recently incorporated to manufacture brass Hardware, hinges, bolts, door knobs and escutcheons, also gas and chandelier supplies. They have added largely to the line of these goods previously made by them and will issue a new catalogue early in June. They will be represented in the sales department by William F. Brainerd, who has long been identified with the distribution of such goods to the trade.

In his last annual report Secretary Wilson, of the Department of Agriculture, suggested the feasibility and advisability of cultivating in the Philippines the tree from which gutta-percha is derived almost exclusively, and which is a native of the islands of the Malay Archipelago. But his latest announcement as to Hawaii is more interesting, as contemplating cultivation of the rubber plants of Brazil, of Central America and of Mexico.

The J. D. Warren Mfg. Co. have just received, among others, a nice order from the Atkinson Hardware Co., of Fort Smith, Ark., to equip their store with the Warren System of Hardware shelving; also an order each from Babbitt Bros., Flagstaff, Ariz.; Belt Hardware Co., Belt, Mont.; Bruegger Mercantile Co., Williston, N. Dak. Inquiries are numerous, and the indications denote that Hardware dealers are giving much attention to the question of improving their stores.

All the assets of the National Shear Co., commonly known as the "Shear Trust," were sold at public auction sale in New York City on Friday, May 18, 1900, under the directions of the United States Bankruptcy Court. That part of the property which included realty, machinery, tools, merchandise, brands, etc., located in Newark, N. J., were bought in by Mr. Wiss in the interest of the firm of J. Wiss & Sons, who were the original owners of this factory before the same was purchased by the National Shear Co. J. Wiss & Sons assume control at once and will be pleased to hear from the trade in general, and particularly from their old customers. The remainder of the assets were purchased by J. C. Pierson, one of the largest creditors of the bankrupt concern.

Acting upon the many favorable responses received in answer to the suggestion that a conference of those interested in the implement trade be held in connection with the National Convention of this Association at Milwaukee, Wis., June 12-14, 1900, the officers of the National Association of Credit Men have decided to call such a conference to take place on the afternoon of June 12, the exact hour to be announced later. In a circular in reference to the same recently issued by the secretary, Wm. A. Prendergast, he says: "It seems hardly necessary to expatiate on the benefits that should accrue to your trade from a conference of this character, wherein may be freely discussed such vexatious problems as dating, long time, commission deals, unjust claims of customers, excessive discounts, and as a result of which discussion there will undoubtedly be developed wholesome remedial action for the eradication of these and other evils. It is designed to prepare for the conference a brief and attractive programme of questions for discussion and action." A rate of a fare and one-third on the certificate plan has been secured for those attending the Convention.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

The reports from various trade centers do not indicate that rushing condition of business generally which warms the manufacturer's heart with frequent orders of a supplementary character, and causes the jobber to wreathe his countenance with smiles at the crowded condition of his packing department and the large number of order books filled with specifications, on the shipment of which no date can be affixed. The retailers, taking advantage of the example set by the wholesalers, are buying in a very conservative manner, feeling in anticipation that every change of price from now on is more likely to be lower than higher. It is so late in the season that to brace up the market by any ordinary methods would fail of success, and with two months or more ahead of comparative dullness in which to do the figuring for the Fall season, as Shakespeare says: "Must give us pause." It looks as though, with the usual hope at the bottom for a good Fall trade, and the prospect of an easier solution to the Presidential problem than is usually afforded the voter, the dealer, like the cat in the adage, will let "I dare not wait upon I would," and probably make his orders lighter than usual for the customary wants of the Fall and Winter season.

Lower quotations are extremely apt to rule in the iron and steel markets, which the recent drop in wire products has affected through outside rather than inside influence. Goods that are near the raw material with only a modicum of labor as a condition of cost, will surely experience the change before the next season feels its full force. These goods were the first to take advantage of the necessity for protection on account of big advances in raw material, and will be affected in some degree by each shading in market quotations.

So far the market has stood the strain of unprecedented conditions now a month old, and it deserves credit for the way it has sustained retrograde influences. Many lines have been held back from uncalled-for advances in current quotations, every dealer can put a finger on many of such goods constituting his natural and regular stock. Such goods can and will be ordered unhesitatingly; and these lines are greater in number than one would imagine who has given no serious thought to the matter.

Since the decline in price of fence wire, the demand has been so great that surplus stocks already grow fine by degrees and beautifully less. Deliveries are slow, and it would be no surprise if quotations recovered some of that decline of a dollar before season closes. Complaint is made by the retailer that prompt shipments by the jobbers seem difficult when they thought stocks were reported so large. They should remember jobbers bought at the high prices as carefully as the orders from customers would justify, and when the entire trade are rushing in orders, the big pile of fence wire at the mill disappeared like dew before the rising sun.

Trade is somewhat late in several sections on account of the cold weather of last month limiting inquiries for hot weather specialties. The indications are the season will be spread out until July, and when results are fairly canvassed, it will be found the season compared with any year except the last will prove a very satisfactory one. The unrest in the midst of prosperous times shown by workmen in a number of localities who desire to place their employers at a disadvantage that they may temporarily profit by a change, unsettles the regular trade demand, and keeps the merchants in all lines guessing at results.

No sane or sanguine merchant of the present time but knows that abnormally high prices must reach a period of sagging from highest standards and get down within reach again. Our buyers are educated in a school that causes them to study every commercial condition surrounding the most important markets, and feel at times that the man who hesitates is not invariably lost.

Hopeful Condition of Affairs.

It is in the nature of things that unnecessarily high quotations regarded with fear and distrust for some time will be entertained with caution and hesitation. It is better for the trade at large if the markets during the time now approaching should be found in a condition placing them beyond the reach of further declines that are radical and far reaching. The country is prepared to accept the fact that labor is in better demand, and increased remuneration is the result; that a natural and steady advance over prices formed in a period of dullness must necessarily follow the prosperous conditions, caused by labor being well employed; and a return to this more promising level in general business would be hailed as a harbinger of permanent improvement and welcomed accordingly. We are not losing sight of the fact that our country is growing perceptibly greater with each recurring season. Shipload upon shipload of emigrants are loaded upon our shores, the care of the government proving them not unprovided with money to pay for current wants, a majority of them adults with willing hands to enter fields of labor not always of the most remunerative character or sought after by the organized skilled labor forces of the community.

These conditions mean that the country is seeking the peaceful paths of production of one kind or another, each step forward creating demands upon established industries that grow with the country's growth and become vigorous under the added strength. The export outlet for our accumulating production has been kept open in

Digitized by Google

THE NEW YORK PUBLIC LIBRARY 21

a wise and judicious manner by studying the markets of the world—many of which we have yet to conquer—ascertaining the quality and price which has so far controlled them within the grasp of other nations and ascertaining how readily we could fill demands which the congested conditions of the factories of Europe rendered impossible of fulfillment except at dates too remote. While adverse criticism is infrequently made of the extremely low quotations—low by comparison with the quotations governing home markets—at which orders are taken, the necessity for a foreign outlet in order to save critical periods in our domestic distribution should be plainly apparent to the merchant who has once felt the conditions following overproduction and its prolonged recovery without some such outlet.

The soundness of the general business condition is everywhere noticeable. Stocks are being kept in an average state of supply without feeling a necessity for speculatively stocking up at every slight weakness in quotations. Money is in excellent supply in every trade center; never in the history of the country has the supply of money been so great per capita as it is at present, and our bankers are entering the bourses of other countries bidding on their loans, bargaining for their securities, selling our gold to the highest bidder, and in every known way assuming the characteristic importance which comes from holding a hoarded wealth in healthy reserves looking for profitable investment in any part of the globe which may picture the greatest and most advantageous possibilities.

End of Litigation Among File Manufacturers.

The suit of the Stokes Brothers' Mfg. Co. of Freehold, N. J., against Heller Brothers Co. of Newark, N. J., was finally terminated in Philadelphia recently in favor of the Heller Bros. Co. The suit was instituted as far back as 1892, and was based upon four patents relating to rasp cutting machines, and to the production thereof.

The Stokes Bros. claimed that they were pioneers in the field of rasp cutting by machinery, which claim the Hellers denied, consequently in May, 1893, the Stokes Co. moved in the United States Circuit Court, at Trenton, for an order and leave to inspect the machines of the Heller Co., which resulted in a denial of the motion and forbidding the inspection sought.

The Stokes Co., at a later date, took an appeal, which was argued in the United States Circuit Court of Appeals at Philadelphia in March last, when the opinion of the Court was handed down by which the Hellers were again vindicated.

It appeared by evidence during the course of the litigation that the Hellers had machinery, methods and secrets known only to themselves in the production of their goods which had been in use by them long before the supposed new inventions and discoveries by the Stokes Bros.

The Court held that the latter were not pioneers, and that their claims were limited, and that defendants did not infringe.

"Our Country, 'Tis of Thee."

No country on the face of the globe has such resources in fields, forests, mines and factories as the United States. No nation has such a command of the great forces that now control the world—steam, electricity and machinery. No country has such an ingenious, intelligent, energetic and progressive population. Surely, with the precedents and experience of the other great section of the English-speaking race we can solve the problems that now confront us and realize the destiny which an overruling Providence seems to have created for us.

Death of Henry Barnett

Henry Barnett, President of the G. & H. Barnett Co., Front and Richmond Streets, Philadelphia, manufacturers of the Black Diamond files, died last Tuesday morning at his home, Sixteenth Street and Allegheny Avenue, in that city, of a complication of diseases, in his sixty-third year. Mr. Barnett had been failing in health for several months, but it was not thought that his illness would result fatally until last Saturday night, when after returning from the works he was stricken and confined to his bed.

Mr. Barnett was born in Nottingham, England, on March 13, 1838, and when a small child his parents left England, removing to France. He had been there but a short time, when the outbreak of the Revolution made it necessary for young Barnett's parents to seek a home in another country, and they came to America, settling in this city. When 11 years of age young Barnett was apprenticed to the late J. Barton Smith, a file maker, whose place of business was in the old Northern Liberties District, in Philadelphia. The lad's ability as a workman soon showed itself, and shortly after finishing his apprenticeship, Mr. Barnett, with his brothers, William and George, removed to Pittsburgh, where they started in business for themselves, under the name of Barnett Bros. This was the beginning of an association which was to last for more than half a century. The business in Pittsburgh had been established but a short time, when thinking that Philadelphia offered more advantages, the brothers removed to that city, establishing themselves on Hayden Street, in the vicinity of the present site. They opened their factory in a two-story brick building. To-day it occupies more than five acres at Front and Richmond Streets. When Mr. Barnett and his brothers came to Philadelphia they confined themselves to the manufacture of files exclusively, under the firm name of G. & H. Barnett. Later, as their business increased, they removed to their present quarters. Their Black Diamond file, it is said, has become known in nearly all parts of the world. In 1895 the firm became incorporated under the laws of Pennsylvania, and assumed the name of the G. & H. Barnett Co., the deceased being elected president.

Mr. Barnett served as a volunteer during the Civil War and as a soldier in the army of the Potomac, participating in nearly all of the battles, including Gettysburg. He was a member of Winfield Scott Post, G. A. R. He was also a prominent Mason, being a member of the Philadelphia Consistory, St. John's Commandery, K. T., Kensington Chapter, No. 233, Columbia Mark Lodge, No. 91, Williamson Lodge, 369, F. and A. M., and the Mystic Shrine. He was also a member of the Knights of Birmingham, A. O. U. W., Red Men, Odd Fellows and of the Society of the Sons of St. George, Union League, the Belmont Driving Club, the Turf Club, the Hardware Merchants' and Manufacturers' Association and the Black Diamond Beneficial Association. Mr. Barnett is survived by a widow and five children, Alfred, one of his sons, being Secretary-Treasurer of the company which for so many years has borne his father's name.

Hint for American Exhibitors at Paris.

Consul-General DuBois, of St. Gall, writes:

"If American firms having exhibits at Paris would send to the Consular officers a few neatly printed cards, mentioning the character of their exhibits and extending a cordial invitation to the bearer to examine them while visiting the exposition, I am quite sure that all consular officers of the United States would see that these cards are placed in the hands of merchants residing in their districts who are likely to be interested in the exhibits to which they relate, and who will desire to examine them should they visit the exposition. One large shoe dealer said to me recently:

"'I am going to Paris to examine the American shoe exhibit, to see if I can make arrangements with some good firm to ship shoes to Switzerland. Do you know what firms are to exhibit?'

"The same spirit of inquiry may be found among the Swiss dealers in Hardware, bicycles, automobiles and agricultural machinery, photographic supplies and many other articles that may be imported into this country with success."

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—Some time ago a creditor of mine sued me and obtained a judgment against me; I owned no real estate at that time, but I had some money in the bank which fact my creditor did not know. Since this judgment was obtained against me, I have bought a house and a piece of property; I have been offered a good figure for my house, and I am anxious to sell it. Kindly inform me, 1, whether or not my judgment creditor can touch any of my money in the bank. 2. How could he find out about my money and how could he get it? 3. Does his judgment affect my house and property which I have since purchased?

REPLY.—1. If your judgment creditor finds out in what bank your money is deposited, he could have it applied to the satisfying of his judgment. 2. Your creditor could examine you under oath and in that examination he would undoubtedly ask you as to the matter, or he might get the information from some one else where your bank account is located; he has only to serve an order upon the bank where it is deposited, directing them not to pay the money to you. The court will then, upon proper facts being shown, direct you to pay the money to your creditor which you must do, or be punished for a contempt of court. 3. The judgment of a court of record in this State is a lien upon all real property owned by the debtor in the county where the judgment was obtained, or where a transcript thereof has been filed for ten years from the docketing of said judgment or the filing of said transcript. This bill attaches not only to property owned by the debtor at the time the judgment was obtained, but attaches to all property subsequently acquired for ten years thereafter in any county where a transcript has been filed. The judgment itself lives for 20 years and may be redocketed and made a lien for more than 10 years.

QUESTION.—A short time ago the person from whom I rented my store died. He left several children, all of whom are of age, so far as I know. Two of these sons have come to me separately and requested me to pay the rent to them. Who is the proper person in such case to whom I should pay the rent?

REPLY.—The executor or administrator of the estate of the deceased is the only person to whom you should pay rent. You should, therefore, refuse to pay the rent to anyone until the executor has qualified or the administrator been appointed. If you pay the rent to some one other than the executor or administrator, the payment may be enforced by the executor or administrator, if the rent never came into his hands.

QUESTION.—My wife owns considerable real estate in both New York and Massachusetts; I have been told by some friends of mine that I would have a right to this property if my wife died, having had a child of our marriage, and that she could not will it to her relatives. We have no children now, having had but one child, who died when a year old. Kindly inform me whether my wife can dispose of this property to her relatives, and whether I am entitled to it, on my wife's death?

REPLY.—As to the real estate your wife owns in New York, she can defeat any interest you might have in it by virtue of a child having been born of your marriage. In many States the husband is entitled to a life interest in one-third of the estate of his wife, provided issue was born of the marriage. This estate is similar to the dower which a woman is entitled to in the estate of her husband and is called an estate by the curtesy. We presume this is what your friends referred to. In New York the wife may deed or will away her property irrespective of the curtesy of her husband, and he will be entitled to the interest only in the property not disposed of by her at her death. In Massachusetts, so in New Jersey and some other States, the wife cannot deprive her husband of his estate by the curtesy, either by will or deed, without his consent.

QUESTION.—Does the marriage of a man or woman in New York State have any effect upon a will made by them before the marriage took place? If so, what effect does it have?

REPLY.—In New York the marriage of a woman after the execution of a will is deemed to act as a revocation of the will; the theory being that upon marriage, a woman forms so many new ties that it is not to be expected that she desired her property to be distributed as though she were single. Marriage alone does not have this effect upon the will of a man in this State. In order to work an implied revocation in the case of the will of an unmarried man, there must not only be marriage, but subsequent birth of issue. If these events take place after a man has made a will, the will is impliedly revoked.

QUESTION.—One of the executors named in a will was a minor at the time the will was executed, the other was of full age. 1. Does the fact that one executor being under age at the time of the execution of the will destroy its validity? 2. If not, could the minor qualify and act as executor? 3. If the minor became of age before the death of the testator, would that make him legally eligible as executor under the will above mentioned?

REPLY.—1. The fact that one of the executors named in a will was under age at the time of the execution of the will, could not in any way affect the validity of the will for purposes other than the appointment of an executor. An appointment of an executor in a will might be entirely invalid, in which case an "administrator with the will annexed" as he is called, would be appointed to carry out the provisions of the will if the will were otherwise valid. 2. Section 2612 of the New York Code of Civil Procedure, provides that "No person is competent to serve as an executor who at the time the will is proved is (sub-div. 2) under the age of twenty-one years." This section would therefore disqualify an infant from acting as an executor under the will. 3. If, however, the minor became of age before the will was proved, this disability would have ceased to exist, and he would not be an incompetent person to act as an executor because at the time of the execution of the will he was an infant.

Our New Record in Exports.

The fiscal year 1900 continues to break all records in the matter of exportations. April is an example of this fact. The total exports in April, as just announced by the Treasury Bureau of Statistics, are $118,926,507, which is $20,000,000 more than in any preceding year, $30,000,000 more than the total for April of last year, and double that of April, 1898. Never before has April, which is usually a light export month, reached the $100,000,000 mark in its exports.

Every branch of industry lends its aid to this increase. The total figures for the month of April have not yet been sufficiently analyzed to show the exact increase in each class, but an analysis of those for the month of March shows that agricultural exports in that month were $18,000,000 greater than in the corresponding month of last year; that manufactures were $8,000,000 in excess of the corresponding month of the preceding year; that products of the mine were nearly 50 per cent. in excess of those of the corresponding month of 1899, while products of the forests, fisheries and those grouped as miscellaneous all showed an increase.

The advance in prices of cotton, corn, oats, wheat and provisions accounts in part for the increase in the value of agricultural exports, while there is also an increase in quantity exported, especially in cotton, and the advance in values also accounts in part for the great increase in exports of manufactures.

It is now apparent that in all the great classes of our exports the record of the year 1900 will exceed that of any

Digitized by Google

earlier year. In the nine months ending with March, exports of agricultural products were $18,000,000 greater than those of the corresponding months of 1899, manufactures were $70,000,000 greater than those of the same months in the preceding fiscal year, products of the mine exceeded those of the corresponding months of 1899 by 33 per cent., those of the forest showed a like increase, and fisheries and miscellaneous exports also showed a gain over the corresponding months of the preceding fiscal year.

With the phenomenal increase of $30,000,000 in April, 1900, as compared with April, 1899, it is quite apparent that the record of the year which ends less than sixty days hence will exceed that of any earlier year in our history. The following table shows the value of the exports in April of each year from 1890 to 1900:

April.	Value.	April.	Value.
1890	$63,495,791	1896	$71,089,655
1891	70,906,976	1897	77,648,786
1892	75,954,962	1898	99,314,816
1893	59,873,346	1899	88,794,873
1894	64,124,812	1900	118,926,507
1895	65,255,845		

Programme of the Convention of the National Association of Credit Men, June 12-14, 1900.

The programme herewith submitted is as complete as it is possible to make it at this time, and may be subject to some slight changes. The plan employed corresponds closely to that followed in the programme of the Buffalo Convention, which was based upon experiences of previous years and met with general and cordial approval:

TUESDAY, JUNE 12, 1900.

Convention called to order by the President at 10 a. m.

Invocation by Rev. Charles Stanley Lester.

Minutes of previous Convention.

Address of welcome by Hon. David S. Rose, Mayor of Milwaukee.

Address of welcome on behalf of Milwaukee Association, H. M. Battin.

Response to addresses of welcome.

President's annual address—President John Field.

Treasurer's annual report—Treasurer T. H. Green.

Appointment of Auditing Committee.

Secretary's annual report—Secretary Wm. A. Prendergast.

Appointment of Committees on Credentials and Resolutions.

Address—Gov. Edward Scofield, of Wisconsin.

Report of Membership Committee, Frank E. Freese, Chairman.

Open parliament on the report of the Membership Committee.

Report of Business Literature Committee, H. E. Hutchings, Chairman.

Open parliament on the report of the Business Literature Committee.

Appointment of chairmen of State delegations.

Adjournment.

WEDNESDAY, JUNE 13, 1900.

Convention called to order by the President at 9 a. m.

Invocation by Rev. Rabbi Mayer.

General communications, announcements, etc.

Report of the Committee on Credentials.

Address, "Business Morality," John R. Ainsley, Esq., of Brown, Durrell & Co., Boston, Mass.

Report of Committee on Improvement of Mercantile Agency Service, E. Troy, Chairman.

Open parliament on report of committee, etc.

Report of Legislative Committee, George H. Hovey, Chairman.

Open parliament on report of Legislative Committee.

Nomination of candidates for president and vice-president.

Informal ballot for nominees for president and vice-president.

Adjournment.

THURSDAY, JUNE 14, 1900.

Convention called to order by the president at 9.30 a. m.

Invocation by Rev. Judson Titsworth.

General communications, announcements, etc.

Address, "Why I Am a Member," Dorchester Mapes, Simmons Mfg. Co., Chicago, Ill.

Report of Committee on Credit Department Methods, Green Benton, Chairman.

Open parliament on report of Committee on Credit Department Methods.

Report of Investigation and Prosecution Committee, Daniel B. Murphy, Chairman.

Open parliament on report of Investigation and Prosecution Committee.

Election of officers.

Selection of place for next annual convention.

Selection of central office.

Report of Committee on Resolutions.

Installation of officers for the new year.

Adjournment.

TRADE CONFERENCES AT THE MILWAUKEE CONVENTION.

Boot and Shoe—Chairman, Wm. N. Fitzgerald, Bradley & Metcalf Co., Milwaukee, Wis.

Clothing—Chairman, Max Silberberg, Feder, Silberberg & Co., Cincinnati, O.

Dry Goods—Chairman, Wm. M. Burgess, M. E. Smith & Co., Omaha, Neb.

Grocers—Chairman, G. Waldo Smith, Smith & Sills, New York, N. Y.

Hardware—Chairman, J. T. Jenkins, Gray & Dudley Hardware Co., Nashville, Tenn.

In addition to the above mentioned conferences it may be decided to have another, representing the Implement Trade, arrangements for which are under way at the present time.

Extreme care and energy are being exhibited in the preparation of the work to be laid before these conferences, and a stenographer will be present at each conference to make a complete record of the proceedings, as it is the intention to publish them at a later day.

ENTERTAINMENT AT THE MILWAUKEE CONVENTION.

The Milwaukee Association has arranged the following programme for the entertainment of those attending the Convention of the National Association of Credit Men:

Tuesday evening, June 12, 1900.—Concert at the Deutscher Club.

Wednesday evening, June 13, 1900.—Tally-ho ride for the ladies attending the Convention.

Wednesday, June 13, 1900, 3 p. m. prompt.—Excursion on the lake and trolley car ride to White Fish Bay, where supper will be served in the evening.

Thursday afternoon, June 14, 1900.—Visit of inspection to the large factories of the city.

Thursday evening, June 14, 1900.—Smoker and vaudeville entertainment.

An Export Sample Warehouse.

The shareholders in the Frankfort-on-Main export sample museum held their fifteenth general meeting on March 28. The report describes last year's results as decidedly satisfactory. The museum includes samples of more than two hundred manufacturers, of whom the greater part are in Frankfort and the neighborhood. It holds a standing exhibition of German products intended for export, and is visited by numerous exporters and foreign buyers, who thus have an opportunity afforded them for placing orders. A catalogue of the goods in German, French and English is published and widely distributed. The institution also imparts information on all matters touching on the export trade, and has proved of great use in this respect. It is said that Berlin intends following the example of Frankfort by establishing a central office for giving information of this nature, and that the Berlin merchants have already promised £2000 towards this object.

Our Growth in Asiatic Exports.

Exports to Asia and Oceanica in the fiscal year which ends with the month of June will for the first time in our history exceed $100,000,000. In no part of the world has our export trade grown with such amazing rapidity, with the single exception of Africa. In 1893 our total exports to all Asia and Oceanica amounted to only $27,421,831, so that in the fiscal year now about to end they will be about four times as great as those of eight years earlier. Imports from that part of the world are also growing rapidly, because of the large increase in the share of our sugar supply which now comes from the islands of the Pacific. More than one-half the sugar imported into the United States now comes from the East Indies and Hawaiian Islands. Of the 2,891,806,558 lbs. imported into the United States in the nine months ending with March, 1900, 1,553,415,397 lbs. came from the East Indies and the Philippine and Hawaiian Islands; the amount from the East Indies alone being 1,143,025,446 lbs.; from the Hawaiian Islands, 360,899,409 lbs., and from the Philippines, 49,490,542. The quantity imported from the Philippines in the 9 months ending with March, 1900, is three times as much as in the corresponding months of 1898, and from the East Indies it is two and one-half times as much as in the corresponding period of 1898.

The growth in exports to Asia and Oceanica is chiefly in cotton, breadstuffs, provisions, and manufactures. Exports of agricultural machinery to British Australasia in the 9 months ending with March, 1900, were $609,323, against $349,550 in the corresponding months of 1898. Exports of flour to China in the 9 months ending with March, 1900, was 46,961 bbls., against 14,616 bbls. in the same months of 1898, to Japan 417,430 bbls., against 107,401 bbls. in the same months of 1898, and to Hong Kong 1,009,248 bbls., against 647,688 bbls. in the same months of 1898. Carriages and cars to Australia amounted to $412,254, against $251,802 in the corresponding months of 1898; cotton cloth to China in the 9 months ending with March, 1900, was 156,830,255 yards, against 77,990,676 yards in the corresponding months of 1898. Raw cotton exported to Japan amounted in the 9 months ending with March, 1900, to $11,517,968, as against $5,843,710 in the same months of 1898. Builders' Hardware exported to Asia and Oceanica in the 9 months ending with March, 1900, amounted to $1,254,000, an increase of 50 per cent. over the same months of 1898, while boots and shoes to Asia and Oceanica in the 9 months ending with March, 1900, reached nearly one million dollars, against a quarter of a million in the same months of 1898.

The following table shows the value of our exports to Asia and Oceanica, and to the principal divisions of that part of the world in the 9 months ending with March, 1898 and 1900, respectively:

EXPORTS FROM THE UNITED STATES TO ASIA AND OCEANICA IN THE NINE MONTHS ENDING WITH MARCH, 1898 AND 1900.

Japan.	1898. Dollars.	1900. Dollars.
All Asia and Oceanica	48,699,673	82,667,398
All Asia	32,225,726	50,686,488
All Oceanica	15,873,963	32,530,910
Japan	15,139,175	23,330,739
British Australasia	11,226,040	19,991,170
China	6,889,081	12,495,583
Hawaiian Islands	4,289,000	18,214,136
Hong Kong	4,451,667	6,101,442
Philippine Islands	75,728	1,975,783
Asiatic Russia	130,177	1,861,807

The Tinplate Industry.

Since the establishment of tinplate manufacture in the United States there seems to have been a very rapid transposition of the figures indicating the amount manufactured at home and the amount imported. In 1891 there was practically no production of tinplate in this country, while the imports were something over 1,000,000,000 pounds during that year. The official figures for last year were, imported, 108,484,826 pounds, or hardly more than one-tenth of the importations of 1891, and manufactured in the United States 791,371,484 pounds.

The plates used as the basis of the tinplate can probably be produced here cheaper than anywhere else in the world, and the process of dipping has been much improved since Americans took hold of the business. A gratifying thing about the matter also is the excellent quality which American tinplates have attained. This was a point upon which some doubt was at first expressed, but experience has shown the ability of American makers to put out as good an article as the best foreign, and at a cost so low that the export trade in tinplates promises to be in time a feature in American business.

In 1890 this industry practically did not exist in the United States. It then became the subject of special protective laws —and see the results:

Fiscal Year.	Pounds.
1891-1892	13,646,719
1892-1893	99,819,202
1893-1894	139,223,467
1894-1895	198,801,073
1895-1896	307,228,621
1896-1897	446,962,063
1897-1898	681,674,023
1898-1899	971,371,488
Total	2,673,746,661

This would be equivalent to a total production of 24,756,900 boxes of 108 pounds.

A New Shear Combination.

The shear combine, which passed into bankruptcy some months ago, has been reorganized. The new company, however, will drop one of the largest constituent plants, it having been announced that the property of J. Wiss & Sons, of Newark, N. J., will remain independent, but all the remaining concerns will be included in the new consolidation. These concerns are the Clauss Shear Co., of Fremont, Ohio; Standard Shear Co., of Elyria, Ohio; William Schollhorn Co., of New Haven, and the Seymour Cutlery Co., of Holyoke, Mass.

It is also announced that the management of the new company will be controlled by J. C. Pearson, of Boston, the capitalist who some time ago provided the National Shear Co. sufficient funds to carry on the business. Mr. Pearson was the chief creditor, and bought in the properties at the recent sale, with the exception of the Wiss plant at Newark.

A meeting at which the organization will be perfected will be held shortly. It is expected that J. H. Clauss, of the Clauss Co., the former president of the shear company, will be elected a director, and he may be re-elected president.

Walter T. Rosen, the attorney in charge of the legal part of the work, is reported to have said it was the intention of the new management to commence operations immediately. The capital stock has been cut down from $3,000,000 to $300,000.

Briquette Making in India.

Indian Engineering says that at Haranpur a plant has been erected for the manufacture of coal dust into briquettes. The coal dust, with 8 per cent. of its bulk of pitch, well mixed together, is poured into molds under a pressure of 18 cwt. to the square inch. From the molds they pass to an endless chain, which delivers them alongside the trucks into which they are to be loaded. The plant also includes a separator and washer, but these are not used, as it was found that they removed a large proportion of the coal along with the dirt. The slack coal costs 5 to 8 rupees per ton, and the briquettes, which measure 6 inches by 4 inches by 3 inches, and scale 28 per hundredweight, cost, including all charges, such as interest on capital, 14 rupees per ton. The plant is capable of turning out 20 tons a day.

The Czar has an income of $1000 per hour, the Sultan $850, the Emperor of Austria $500, the Kaiser $450, the King of Italy $330, Queen Victoria the same, the French President $250, the King of the Belgians $85, and the President of the United States $7.50 per hour.—*Ex.*

CHARACTERISTICS OF RETAIL CUSTOMERS.

There is an old saying to the effect that "it takes a good many folk to make a world," and no one finds out the truth of it sooner than the Hardwareman. The study of the idiosyncracies of his customers is one which every ironmonger must undertake. His business success will, to a certain extent, be measured by his ability to discern their peculiarities and to grapple with them. Some men have an innate faculty for reading character, and can make a survey of a client at almost a glance; others are almost devoid of such, and are thus very apt, to use a vulgarism, to "put their foot in it." The merchant has to encounter a large variety of dispositions in his daily transactions; he need be very cautious in his mode of treatment, and must ever be ready to adapt himself to circumstances. The ways of some clients may be enough to try the temper of a saint, but the business man must have no temper. He must retain a calm, patient, and kindly bearing, even though he be tried to the utmost. There is a time, however, when he must assert his rights, but it must be done in a dignified and impressive manner, which will strike home to the offender without annoying him. Some folk, for instance, entertain the idea that tradesmen are a class of people whom, if they do not closely watch, will take undue advantage of their technical ignorance and extract undue profit from them. When shown an article and quoted a price, they will cast a suspicious look, find fault with the figure, and begin to make comparisons with former purchases or other things which they have seen. It is most unpleasant and irritating to the tradesman to receive such treatment, and his attention must be directed toward proving to his client that he is a man of honor and integrity, who would not take undue advantages.

THE "STAND OFF" CUSTOMER.

Then there is the "stand off" client, who, upon entering the warehouse, states his requirements in a few and almost curt words, resents interrogation, and expects to be waited upon and treated as a very superior person, with whom there must be not the slightest liberty taken. If the person who waits upon him attempts to be civil by polite remarks upon the state of the weather, or the burning question of the hour, he will probably receive a distant answer, which will be so obvious that it will show him that his conversation is not agreeable. Such a client must be treated with a certain amount of deference, even though his social position may not uphold it; the assistant should be polite and endeavor to be concise in his remarks, saying as little as consistent and keeping entirely to the subject of the purchase. When this is completed and the client moves to leave the warehouse, he should be upon the alert as to whether he wishes him to wish him "Good-day," for some of these folks even resent this, walking straight away with no response if one be so polite to say it in an unassuming manner. In such cases it is advisable to say nothing after the completion of the purchase.

THE GOSSIP.

The next client may happen to be the gossiping one; weather, politics, local scandal, and various other topics will probably be brought up, in which the client expects the person waiting upon him to join. Here the assistant must exercise great caution and tact; he must be pleasant and polite, and appear to take some interest, but at the same time he must unconsciously govern his client, so that the purchase may be made with as little time as possible wasted upon mere talk. It is most difficult to get rid of such people in a reasonable time; they need a deal of the exercise of the virtue of patience and not a little tact. A good plan is to leave the counter and walk to the door when the fitting opportunity occurs after the purchase, making politeness in opening it for the customer's exit, with as little waste of time as possible.

THE "ROUGH AND READY" TYPE.

Some clients are of the "rough and ready" type, and appeal to you as "governor." This phraseology and its invariable accompanying tonal effect may be somewhat resented by a refined nature. Such refinement must, however, be checked. This class of folk often are clients who are worth having; they do not grumble at prices, are often quick in making up their minds, and above all, pay cash. In dealing with them, try to enter into their little peculiarities, at the same time, refrain from vulgarity; show them that you are doing your best to please them, they will respect you, make their purchase, and leave the shop with a good feeling. These people, though they possess rough and coarse natures, often have kind hearts, and their mode of expressing themselves is the result of their environment, and no criterion of their temperament. Do not resent their manner, but be patient, business-like, and kind, and you will produce a good effect upon them, which will, in the future bring further grist to the mill.

THE POMPOUS PERSON.

The pompous client may favor you with his patronage. The manner of such folk is admittedly most repugnant, but nevertheless it has to be met. These gentry often enter the establishment with tremendous airs, are evidently very satisfied with themselves, and expect that you will return the compliment. Their conversation is largely monopolized with a recapitulation of their great doings and possessions. They seek admiration, and although it is most difficult to return it, it is wise in some way, to let them think you are charmed with them, and fully recognize their superiority. What is vulgarly known as "sitting upon them" must by no means be attempted. The vendor must pay heed to their requests, preserve a natural obliging demeanor, and endeavor, as far as possible, to treat them in the way they desire to be treated, as evinced by their characteristics. Any resentment of their manner will be noticed immediately, for these people often possess most sensitive natures. This may seem incongruous and incompatible, but experience teaches one that such is the case, and caution must be exercised to avoid treading upon their toes.

THE NERVOUS MAN.

One of the most embarrassing clients probably is the nervous one. He may be noticed outside the warehouse looking in the window, evidently deliberating upon his intended visit. He ultimately enters, views you nervously, and in an agitated and somewhat incoherent manner states his requirements. Some difficulty may be, and often is in such cases, experienced in understanding such. Patience must be exercised, a natural and kind manner adopted, and above all, an intense desire to meet his wishes should be evinced. The slightest sign of impatience or weariness will be at once induced in your client, who may probably make an excuse and leave the place, making no purchase. If he find that you are doing your utmost to oblige him, and apparently do not notice his failing, he will respect you, proceed with his purchase, and leave the establishment with a friendly feeling, and probably become a permanent addition to your *clientele*.

THE EXACTING CUSTOMER.

The greatest exercise of patience is necessary in dealing with the exacting client. His methods are often most irritating, and do not tend to calmness of mind or good feeling.

Digitized by Google

He may dictate to you what your charges ought to be for such and such a job; may check your workmen's time when they enter or leave his house, and above all, expect that you will readily yield to his demands. These cases are exceedingly annoying, and when the client is demonstrative, are most perplexing. Even after the matter has been fully explained, and the fallacy of attempting to check time exposed, when some part of it has to be spent in the workshop in preparing or altering fittings before they be fixed, these folk quietly state that they prefer to adhere to their own figures. This makes matters awkward, and although the client's position is untenable in the ordinary sense of reason, it is very difficult to convince him. In dealing with these cases, the utmost patience must be exhibited, although unlimited time cannot be spent in bringing about the desired result. If, after a fair amount of explanation, no impression can be made, and a satisfactory settlement does not appear possible, and the detail and charge is correct and reasonable, be careful how you make any concession, as much of this creates the idea that you have a large margin to manipulate. It may be advisable to give way slightly, if the client have a good account with you, rather than lose him, but this must be the last resource, and even then must be done with great caution. No one can tolerate a continual occurrence of this business, and must in such a case deal firmly but courteously with the matter, and insist upon his rights, even if it means to the loss of a client, or it may become unbearable.

FUSSY CUSTOMERS.

Fussy customers need a deal of management; they do not like this, or that, and when they have made a purchase, give special instructions as to when it must be sent, or that the man who brings it must be sure to wipe his boots before entering the house; or after a job is completed they will find some trifling and unimportant cause for complaint, ask all manner of questions, and expect more attention than another would who gives you a hundred-pound order. The best way to satisfy them is to keep a cool head, use a little persuasion, meet their wishes as far as practicable, and suppress your feelings as much as you can and in all probability they will walk away, after they have had their say, perfectly satisfied.—W. S. H. *in Ironmongery (Eng.)*

Diversified Uses of Tinplate.

In 1891, which year marks the beginning of the tinplate industry in the United States, Wales was making practically all the tinplate of the world. Now the manufacture and use of tinplate in this country has grown so rapidly, especially of late, that few realize the various ways in which it is employed. While a great deal is used for roofing purposes this constitutes only from 10 to 15 per cent. of the total; and, moreover, while unusually referred to under the general title of tinplate, the kind used for roofing is particularly known as terne plate, being coated with a mixture of tin and lead, instead of with pure tin. The mixture of tin and lead better resists the weather than pure tin.

The chief use of tinplate is in the manufacture of cans, boxes and other packages. It is surprising how many articles of commerce are packed in tinplate packages. Groceries, proprietary articles, tobacco, cigars, calcium carbide, typewriter ribbons, blacking—in fact it would require a column to enumerate all the articles which are being put in tinplate packages. The kind of wood used in cigar boxes is growing scarcer and scarcer and even the best is by no means so well suited for the purpose as tinplate. Such groceries as coffee, tea, spices and many others, are best packed in tin.

Tinplate boxes are, by special processes, made from pieces of tinplate which have been first lithographed with beautiful designs in colors, so that the attractive packages make a ready seller, and the housewife frequently buys a tin box of tea or coffee in order to get the box. Proprietary medicines are being packed more and more in tin. A handsomely-decorated tin box helps the sale of such an article wonderfully, and in every case the substitution of a tin box for a paper or wooden package has resulted in greatly increased sales. The cost is very small.

Thus, one can buy a dozen two-grain quinine pills neatly put up in a tin box, with a sliding cover, and having an even dozen little depressions in the bottom, one for each pill, for a nickel. The outside carries a design. To make such a box, including waste, requires only about five and a half square inches of tinplate. Twenty-six boxes may be made from one square foot, and as such small boxes are made from tinplate much thinner than the ordinary gauge, the cost of the tin in such a box, including waste, is less than the thirtieth of a cent.

The manufacture of boxes and cans from tinplate has been made wonderfully economical by the invention of machinery to do all the work. There is practically no labor involved but tending the machines. In a can factory the sheets are fed into machines, and from that point the material is not touched by human hands until the finished can has been produced and tested for leaks. Where the canning establishment makes its own cans it is the practice with a number of products to do the cooking or "processing" right in the can, and in any case the cans are made, tested, filled, sealed and labeled, without being touched by a hand. There are can factories which will turn out a million or more of the regular sizes of cans in a day, and of course, it will be seen that the cost must be very small.

The most common sizes of can used for fruit and vegetables is the No. 2, or two pound can. It is about three and a half inches in diameter, and four and a half inches high. Including the waste, which in ordinary cans has been reduced to from 3 to 5 per cent. it takes only about half a square foot of tinplate to make a No. 2 can, the cost being thus at the present market price of tinplate about one cent. The cans are sold complete at from $1.80 to $1.90 a hundred, allowing the can manufacturer only a fraction of a cent for his solder, fuel, wear and tear on machines, handling, and the loss from occasionally defective ones.

Standard one-pound cans cost only from $1.25 to $1.35 a hundred. The lowest price on record for tinplate was made in the summer of 1898, when the price touched $2.60 a box. At that time the quantity of tinplate required to make a No. 2 can cost only 5 1-2 mills. The advance since then has amounted to 4 1-2 mills per can, or 45 cents a hundred cans. Even when imported tinplate was used exclusively in the United States, and prices were considerably higher than they are now, the tinplate required for a No. 2 can cost only about a cent and a quarter.

Canned corn is now quoted wholesale at from 60 to 70 cents a dozen for the two-pound size. Canned tomatoes are still cheaper, so that the cost of the tinplate in a can of corn or tomatoes is only from a fifth to a sixth of the wholesale price of the article, or from an eighth to a tenth of the retail price.

In the case of the more expensive articles, such as peas, peaches, fish and meat the cost of the tinplate sinks to almost infinitesimal proportions.

The art of making tinplate is about 500 years old. It began in Bohemia, or Saxony, near the Arch Mountains, in Germany, and the people kept the process secret for a long time. But the English stole the secret and began making tinplates at Pontypool, Monmouthshire, in the seventeenth century. In those days the iron was hammered out into rough sheets, and coated with tin. But later the process of reducing it by rolling was discovered, and the industry grew until it assumed large proportions.—*Pittsburgh Dispatch.*

Mrs. Parbury (about to cry)—Now, Clement, you'll discharge her, won't you? And get a new secretary—a man secretary.

Mr. Parbury (calmly)—No, Mabel, unless you give me your reason for wanting Miss Gunning discharged.

Mrs. Parbury—Oh, Clement, why can't you be reasonable? —*Harlem Life.*

ITEMS OF INTEREST FROM EVERYWHERE.

The largest spring works are in Pittsburgh.

Twenty-four men have each served 20 years and upward in the United States Senate.

The population of Berlin, according to the statistics of the municipality, is now 1,843,000.

At Wardbury, Norway, the longest day lasts from May 21 to July 22 without interruption.

The Japanese House of Representatives has passed a bill to prohibit boys under 20 years from smoking.

The British Exchequer's balance at the Bank of England on April 1 was $26,000,000 greater than a year ago.

Nine men constitute a jury in Mexico, and a majority gives the verdict. If the jury is unanimous there is no appeal.

The new Oxford dictionary will contain a new "longest word in the English language,"—"nonintercommunicability."

Within 20 years California has added 500,000 to its population, or five times as many as the entire population of Arizona.

Among the 153,000 inhabitants which the last census gave to New Mexico, there were 20,000 Indians and 50,000 Mexicans.

Municipal authorities in Chicago expect the coming school census to show that the population of the city is over 2,000,000.

Chicago has a bird hospital, the only one of its kind, it is said, in the world, where sick and wounded birds are received and cared for.

Stone street was the first street in New York City paved with cobble stones, hence its name. The paving was done in the year 1657.

Railroads of East and West Java have recently been united, so that one can now travel from one end of the island to the other in two days.

An automobile recently covered the distance from Coventry to London, 92 miles, in four hours, this being an average of 23 miles an hour.

There are now upward of 400 rural mail carriers in the United States, and during the year just closed they carried close to 10,000,000 pieces of mail.

A bill introduced by United States Senator Penrose proposes the coinage of dollars, halves and quarters composed three-fifths of gold and two-fifths of silver.

It is estimated that during the past fourteen months upward of 10,000 wolves have been killed in Wyoming, in addition to mountain lions, wildcats, lynx, bear and coyotes.

The Mersey Dock Board of Liverpool has decided to spend nearly $2,000,000 in making the southern dock able to hold steamers 50 per cent. longer and broader than the Oceanic.

An ocean steamer of the first class, going at full speed, cannot be brought to a halt in less than three minutes. In the meantime she will traverse a distance of about half a mile.

Among the richest and handsomest mantels and fire places now manufactured are those made of petrified Arizona wood, veined and colored like Sienna marble and as highly polished.

The largest reservoir or artificial lake in the world is in India. It was constructed for irrigating purposes in Rajputana, and is known as the great tank of Dhebar. It covers an area of 21 square miles.

A single acre of Washington timber, recently measured by the Division of Forestry, contained 218,690 feet B. M. of red fir, 11,000 feet of hemlock, and 6000 feet of cedar; making a total stand of 236,690 feet.

The output of gold of the Klondike region for this season is estimated at from $20,000,000 to $25,000,000, or about double that of a year ago, which large increase is chiefly due to improved methods of working the mines.

The fire loss statistics of the New York *Journal of Commerce* for 1899 show, for the United States and Canada, a total of $136,773,200, an increase over 1898 of $17,000,000, $26,000,000 over 1897, and $30,000,000 over 1896.

Notwithstanding the difficulties and dangers attending a trip 1200 to 1400 miles over snow and ice in the most inclement season of the year, no less than 700 people left Dawson for Nome between December 4, 1899 and March 1, 1900.

The annual report of the Commissioner of Patents shows a surplus of $113,673 for the operations of the year 1899. The total number of applications for 1899 was 41,443, and present indications point to a breaking of the record for the current year.

During the past year there were eighteen fires, each of which involved a loss of over half a million dollars, the largest individual loss being in Philadelphia, where $1,725,000 worth of property was wiped out in the large department store and publishing house conflagration in November.

The new White Star Line steamship Oceanic sailed recently for Liverpool, with 1752 passengers, the largest number of tourists that has ever sailed from this port on a single steamship, consisting of 325 first class, 265 second class and 1162 third class passengers, together with a crew of 450.

The greatest density of the population in the world is claimed for Bombay, and is only disputed by Agra. The population of Bombay amounts to 760 persons per acre in certain areas, and in these sections the street area only occupies one-fourth of the whole. If the entire population massed in the streets for any purpose, the density would equal 3040 persons per acre.

THE PAN AMERICAN EXPOSITION, 1901

ETHNOLOGY BUILDING.

A DOMED EDIFICE OF GREAT BEAUTY FOR THE PAN-AMERICAN EXPOSITION.

The Ethnology Building will be one of the most central in the extensive group now in process of construction for the great Pan-American Exposition at Buffalo next year. The site for this structure is at the east junction of the Court of the Fountain and the grand Esplanade. It will be conspicuous from all parts of the ground, and its exceptionally ornate character will entitle it to the special place of honor to which it has been assigned.

The building is circular in plan, with four main entrances connected by a continuous colonnade. The colonnade is seven feet above the level of the Esplanade, forming a loggia from which commanding views of the grounds may be obtained. The loggia will be adorned with a broad frieze above the windows and other mural decorations, statuary and statuary figures representing the ethnological types of the five different races.

Over each of the entrances is a pediment, or low gable, with the Pan-American seal forming the decorative motive of the tympanum, or triangular space of the gable. Back of and above each pediment is a sculptured group of horses. The roof of the building is a large dome, like that of the Pantheon at Rome. This is capped by a decorative cresting which hides the skylight opening. Just below the dome in the encircling shaft are eight circular windows, which light the upper gallery. There are two octagonal galleries, the first 25 feet above the main floor, and the second 21 feet higher. On the main floor there are 20,000 square feet of floor space, or about half an acre. The galleries add 10,000 square feet more. The galleries and roof terrace are accessible by stair cases and elevators on each side of the four entrances. The first gallery commands a fine view of the entire interior and plants. Above the colonnade is a terrace with balustrade and will be used for exhibition purposes. The second gallery, opening on the roof, will be used for restaurant purposes and for the accommodation of employees of the grounds. The roof terrace affords a broad view of the park, the Esplanade, Court of the Fountains, aquatic basins, sunken gardens, the mirror lakes and lagoons, buildings and other features of the exposition.

The Ethnology Building is the smallest of the so-called main buildings, and will have a rich interior finish. The eight decorated piers of the interior support eight arches forming the octagon, which, with the pendatives, carry the dome. The galleries encircle the octagon, leaving an open space under the dome 80 feet in diameter and 120 feet high. In the center of the building is a fountain surrounded by seats and chairs. The building is intended to be a place of rendezvous for visitors. The structure is 140 feet long and was designed by George Cary, of Buffalo.

ETHNOLOGY BUILDING PAN-AMERICAN EXPOSITION 1901.

The Germanic, a very well-known steamer of the White Star Line, has made more than 500 trips across the Atlantic. She and her sister ship, the Britannic, built in 1874, have each traveled considerably over 2,000,000 miles, a distance equal to eight and three-quarter times that between the earth and the moon. Between them they have carried considerably over 100,000 saloon and 260,000 steerage passengers across the Atlantic.

Mr. George A. Macbeth, reputed the largest lamp chimney manufacturer in the world, shows how the lead trust, by the aid of the tariff, sells lead for $4.70 per 100 pounds in New York and for $3.60 in London—a difference of $22 per ton. As his glass factory consumes 2000 tons a year, he must pay $40,000 more than his foreign rivals.

"Yes'm, we claim that's the best tinware in the world. Just look at the condition of that pail."

"What about it?"

"That pail, ma'am, was attached to the tail of a dog who ran eleven miles with it!"—*Cleveland Plain Dealer.*

COMMERCIAL RELATIONS OF THE UNITED STATES

The two large volumes of annual reports from diplomatic and consular officers known as "Commercial Relations of the United States," which were transmitted to Congress by the President on the 1st of March, will be issued this year much earlier than usual, and the introduction known as "The Review of the World's Commerce" is nearly ready for distribution. These reports describe the present condition of commerce and industries in all the countries of the world, especially as affecting American trade; and in his message, President McKinley says it is gratifying to be able to state that they "show a marked increase in the practical utility to our exporters and manufacturers of the services of our official representatives, both diplomatic and consular, in promoting trade, and present a mass of evidence as to the steady growth in popularity in foreign markets of our manufactured goods, as well as of our food supplies, our raw materials, and the products of our mines."

In a letter accompanying the President's message, Secretary of State Hay says the reports "present not only the latest statistics for the trade of each country and the share which the United States now enjoys or may hope to gain, but a mass of valuable details and suggestions as to the activities and prospects of all the important industrial and trade centres of the world and the latest information as to the resources and commercial needs of regions which have but recently felt the impulse of modern development."

"Under special instructions from this Department," continues the Secretary, "the consular officers are addressing themselves with steadily increasing zeal and efficiency to the work of collecting information of practical utility to manufacturers in the United States who feel the necessity of enlarging the channels of foreign demand for their surplus production, and they have undoubtedly been stimulated and encouraged in their efforts by the promptitude with which their reports are printed and distributed or are otherwise utilized for the benefit of American trade. The annual reports which, in the then imperfect condition of the machinery for their proper editing and publication, were formerly subject to considerable delay in transmission to Congress, are now sent to that body with the least possible loss of time after the receipt of the completed series at the end of every calendar year, and pains is taken to supplement them with all available sources of current information, so that 'Commercial Relations' shall accurately represent existing conditions at the time of the final revision of the work. The value to our business interests of such a cyclopedia brought practically up to date of issue is obvious, and, in my judgment, it affords gratifying evidence of an aptitude and capacity on the part of our consular service in promoting trade which seem to be exciting the applause and emulation of foreign observers as well as the growing appreciation of United States producers and exporters.

"The consular officers, and, to an increasing extent, the diplomatic officers as well, are rendering a variety of important services to American trade by answering, through the Bureau of Foreign Commerce of this Department, specific inquiries from individual business firms as well as from organized trade bodies, with important results in enlarging the markets for American manufactures as well as for the products of our farms, our forests, and our mines. The answers to such inquiries, if of sufficient general importance, are promptly utilized in the form of daily Consular Reports, which are distributed with the least possible delay to the newspaper press, to Chambers of Commerce and other trade organizations, and to the interests more immediately concerned, so that the country at large may receive the benefit of such data. No other country in the world, it should be remarked, has so rapid a system of disseminating similar information, or one that so satisfactorily meets the requirements of its industries and commerce. In the development of this service, the Department of State is greatly indebted for many valuable suggestions from our manufacturers, exporters, trade bodies, and producers of raw materials, as well as from a number of trade newspapers, experts, and economists, which have been utilized in instructions to our representatives abroad, and in the improvement of methods in the editing and publication of their reports.

"The United States has been so quick to avail itself of the commercial opportunities in other countries and to adapt itself to their special requirements, as indicated from time to time in the Consular Reports, that, notwithstanding its comparatively recent entrance into the markets of the world as a competitor with the older manufacturing nations, it has already acquired a standing and reputation in many lines of production which encourage the hope of a brilliant future in export trade for many industries which, but a few years ago, were accustomed to regard their horizon as bounded by the domestic demand."

The letter of Secretary Hay is followed by a general summary of the reports by Mr. Frederic Emory, Chief of the Bureau of Foreign Commerce, as a preface to the "Review of the World's Commerce." Mr. Emory lays special stress upon the continued development of our export of manufactured goods, and calls attention to the fact that the general demand for American coal in Europe opens up a new field of enterprise and presents the United States in a triple role as a purveyor of food, of manufactured goods, and of fuel for the industrial fires of the nations which sell to as well as buy from us most largely. The summary is as follows:

"Since the date of the last annual review of reports from consular and diplomatic officers upon the industries and commerce of foreign countries, the commercial expansion of the United States, which was then (February, 1899) described as having passed the boundaries of speculation and experiment, has proceeded at a pace which has exceeded the expectations of even those who were most confident of a great development of our export trade. The progress noted in previous issues of the *Review* in extending the sales of American manufactures in the strongly competitive markets of Europe has continued unchecked, except in the few instances where the quality of goods has been sacrificed to cheapness, as, for example, a falling off in the sales of bicycles because of the exportation of inferior wheels, and the word 'American' seems to be rapidly attaining a world-wide celebrity as indicating excellence and superior utility in many lines of goods, especially in machinery of all kinds, labor-saving implements, furniture, boots and shoes, railroad, bridge and other building supplies, Hardware, and a great variety of other classes of articles of iron and steel. The recent scarcity of coal in Europe and the increased demand for American coal seem also to indicate that the United States is about to become a great purveyor of industrial as well as human food, and that, while supplying the world with a constantly growing share of the finished products which it has heretofore taken almost exclusively from European workshops, we shall add to the raw material they have long looked to us to furnish, and the foodstuffs upon which their laboring populations so largely depend, a considerable part of the fuel for their industrial fires. The broad lesson to

Digitized by Google

be drawn from the reports of the consular officers and the data obtained from other sources as summarized in the following *Review* would seem to be this: That neither the products of our agriculture, our forests, and our mines, nor those of our workshops and factories, have anything to fear so long as they preserve their distinguishing merits, and that the only danger they have to face is a falling off in the standard, either through carelessness or the mistaken desire to obtain larger profits by lowering the quality. The reason American cottons have obtained and held a conceded superiority in the markets of China and East Africa is because they have been found by the natives to be more durable than competing cloths, and the same reputation maintained in other lines of goods would seem to be the best guaranty of the permanent and healthful growth of our foreign trade.

"This conclusion is the more obvious when we consider that the remarkable development of our exports of manufactures has been due to their excellence rather than to any marked improvements in our methods of pushing sales abroad. It is a matter of frequent remark on the part of our consular officers that while the efforts of the various organized trade bodies and export agencies which have come into existence in the United States during the past few years are doing good work in directing and systematizing export methods, the individual exporter too often still clings to the trade usages which, while effective enough in the home market, are of but little use, if not actually a hindrance, in extending sales in countries where widely different conditions prevail. It is gratifying to be able to state, however, that the Bureau of Foreign Commerce notes a marked increase of interest, as shown by letters of inquiry addressed to it, among manufacturers, shipping houses, producers of agricultural, forest, and fishery products, lumbermen, miners—in short, every branch of industry in the United States—in the conditions of demand and supply and the special requirements in foreign markets in which they might hope to compete, and the volume of requests addressed either directly to the consuls or to the Department of State for detailed and accurate information indicates a constantly growing perception of the importance of catering intelligently to the varying needs of foreign customers. In these inquiries, as well as in communications from trade bodies, trade newspapers, and individual experts in various branches of industry, and from economists engaged in the study of trade changes and fluctuations, many valuable suggestions for inquiry by consular officers are obtained with results of great practical utility, which are promptly given to the public in the daily consular reports.

"When the fact is taken into consideration that many of these inquiries are technical in character, entailing careful research and accuracy of statement, it will be seen that the consular service is often called upon to perform tasks which only experts could be expected to discharge satisfactorily, but, as a general rule, the results so fully meet the special requirements that a basis of intelligent action is seldom lacking. It is but due to the consular officers to say that they seldom complain of the burdens thus imposed, but, on the contrary, often exhibit the zeal of the missionary in promoting American trade, and supply from month to month a growing mass of voluntary information and suggestion which is nearly always of a practical character. Besides preparing reports and conducting a large individual correspondence relating to purely trade or industrial questions through the Department, many of them lend their personal efforts to the introduction of American goods, and at some of the consulates, samples are exhibited to foreign buyers. Such collections have been opened in connection with consulates, or through the influence of consular officers, at Constantinople, Beirut, Smyrna, and Nice, and at Tampico, Mexico. The consuls at Chefoo, China; at Leipzig, Germany, and at Edinburgh, have offered to inaugurate similar exhibits. Ambassador Hitchcock, while in St. Petersburg, took steps looking to the opening of an American exposition there. The arrangement made by Consul Dudley, of Vancouver, whereby all trade catalogues from the United States are to be exhibited in the rooms of the board of trade of that city, and the action of Vice-Consul-General Hanauer, of Frankfort, in arranging with a large Rhine transportation company for the introduction of American coal into Germany, are among the more recent instances of extra-official effort to give practical direction to our export trade. Special attention has also been given by consular officers to the improvement of transportation facilities between United States and foreign ports, and the establishment of direct steamship lines has been urged with practical results, as in the Mediterranean and in the Baltic. As was remarked in last year's Review, 'there is, of course, a limit to the usefulness of government agencies of this character,' because of the official considerations necessarily involved, but until private enterprise shall have mastered the intricacies of foreign trade conditions and our manufacturers and exporters are represented by capable agents of their own in foreign markets, the consular service will doubtless continue to be the main reliance for blazing the way into new fields of consumption for our products.

"During the calendar year 1899, according to the figures of the Treasury Department (see Monthly Summary of Commerce and Finance, December, 1899, p. 1819), the domestic exports of the United States amounted to $1,252,903,987, against $1,233,558,140 in 1898. The percentage of manufactured products was 30.39 in 1899, 24.96 in 1898; of agricultural products, 62.42 in 1899, 69.06 in 1898; of mineral products, 2.66 in 1899, 2.09 in 1898; of forest products, 3.8 in 1899, 3.16 in 1898; of fishery products, 0.45 in 1899, 0.47 in 1898. It will be seen that the gain was most marked in manufactured goods, and the increase is the more significant from the fact that it synchronizes with a general revival of industrial activity in Europe, showing that we are able to hold our own in an intensified competition in the world's markets and with a greatly increased consumption at home of iron and steel, which were being exported in increasing quantities during the period of our commercial depression. Our total imports during the calendar year 1899 were valued at $798,845,571, against $634,964,448 in 1898, an increase of nearly $164,000,000. Analyzing the Treasury figures, we find that the percentage of imports free of duty was 43.91 in 1899, 43.26 in 1898; of articles in a crude condition which enter into the various processes of domestic industry, 33.45 in 1899, 31.85 in 1898; of articles wholly or partially manufactured for use as materials in the manufactures and mechanic arts, 9.45 in 1899, 9.31 in 1898. There was a drop in the percentage of 'articles manufactured ready for consumption' from 16.5 in 1898 to 14.9 in 1899, although there was an increase from 12.76 to 13.45 in 'articles of voluntary use, luxuries,' etc. In other words, it would appear that we are importing more foreign materials for use in our industries and less of finished manufactures, with a slight gain in our consumption of foreign 'luxuries'—a condition of things attesting a steadily widening industrial activity, with substantial results in a general increase of our national prosperity and purchasing power.

"An examination of the Treasury figures of exports and imports by articles for the calendar years 1898 and 1899, which precede the summary of consular reports by countries in this Review, will show large increases in the exports of most of the important articles of manufacture, such as agricultural implements, cotton goods, electrical supplies, and apparatus for scientific purposes; manufactures of iron and steel, including Hardware, machinery of various kinds, cash registers, metal-working machines, printing presses, pumps and pumping machinery, sewing machines, locomotive and other steam engines, typewriting machines, nails and spikes, pipes and fittings, stoves, etc.; leather and leather goods of all kinds, vegetable oils, lumber, furniture, house finishings of wood, etc. The total exports of railway cars and other vehicles fell off from $10,959,712 in 1898 to $9,856,453 in 1899, but this is explained by the heavy decline in cycles (included under this heading) from $7,092,197 in 1898 to $4,820,284 in 1899. The sales abroad of railway cars and other vehicles, except cycles, rose from $3,867,515 in 1898 to $5,036,169 in 1899.

"In addition to the Treasury tables giving the exports and imports of the United States during 1899, which are reprinted for purposes of comparison, a statement of the trade of the more important commercial nations, with the relative share of the United States, has been compiled from various sources in order that a comprehensive picture of the trade of the world in its most recent phases may be presented. Following these, the *Review* treats of each country separately under the proper geographical division."

PARAGRAPHS FROM THE INDUSTRIAL FIELD.

In 1899 Bremen received 1,045,635 bales of American cotton up to November 1.

The imports of crude rubber to this country have in the last 30 years increased 431 per cent.

Bordeaux buys about 40,000,000 barrel staves per year, all but 2,000,000 of which come from Austria.

The United States sent $4,910,291 worth of silver direct to China during the fiscal year to February 28.

France consumes 925,000,000 gallons of wine annually, equal to 24.25 gallons per capita of population.

At the April sale of ostrich feathers in London, 57,000 pounds were taken at prices aggregating $610,000.

It is stated that coal is leaving Philadelphia at the rate of 1000 tons a day for Mediterranean ports, ostensibly for railway fuel.

Half a century ago the labor cost in the production of 100 gold hunting watch cases turned was $540. In 1897 it was only $80.

The Howard Axle Works of the Carnegie Steel Co., at West Homestead, has been started in part, and will probably be operating in all departments within the next four weeks.

Lompoc, in Santa Barbara County, California, grows mustard for the whole nation. In that region 2000 acres are cultivated to the seed, the industry employing about 200 farmers.

One of the uses to which electricity is put is in the welding of wire hoops on washtubs. The hoops run around the tub each in a shallow groove and are welded in place. The hoops thus put on cannot fall off.

Over one-half of the agricultural produce imported into the United States during 1894-1898 came from countries wholly or in chief part within the tropics. These imports had an average annual value of $192,732,457.

Hemp receipts in the Philippines January 1 to April 1, are reported as follows: At Manila, 219,770 bales; at Cebu and Ilioilo, 29,353 bales; total, 249,123 bales, compared with 131,206 bales during the same period of 1899.

The New Jersey Industrial Exposition, to be held at Newark, N. J., in 1902, is occupying the attention of many committees. Newark will raise $1,000,000, the State $500,000 and $500,000 is expected from other sources.

There was shipped to the United States from the Dutch colonies coffee to the value of $427,000 in 1897, $307,000 in 1898, and $440,000 in 1899, and a smaller, but still considerable item of Dutch exportation is to be found in cocoa.

More than $4,000,000 worth of American railway engines were exported in the 9 months ended March 31, 1900, as compared with less than $1,000,000 worth in the corresponding period in 1894, and $2,800,000 worth in the corresponding months of 1896.

For the fiscal year 1898, according to official statistics, we imported in crude rubber and gutta-percha 46,055,497 pounds, valued at $25,386,010, against 33,842,374 pounds in 1890, valued at $14,854,512, while in manufactured rubber the values were respectively $805,951 and $367,647.

The first successful attempt ever recorded of casting a solid vessel of aluminum has been made recently by William Martin, at Newlin's foundry, Pittsburgh, Pa., in the construction of a fire extinguisher apparatus. Heretofore it has been considered impossible to either cast or weld this metal.

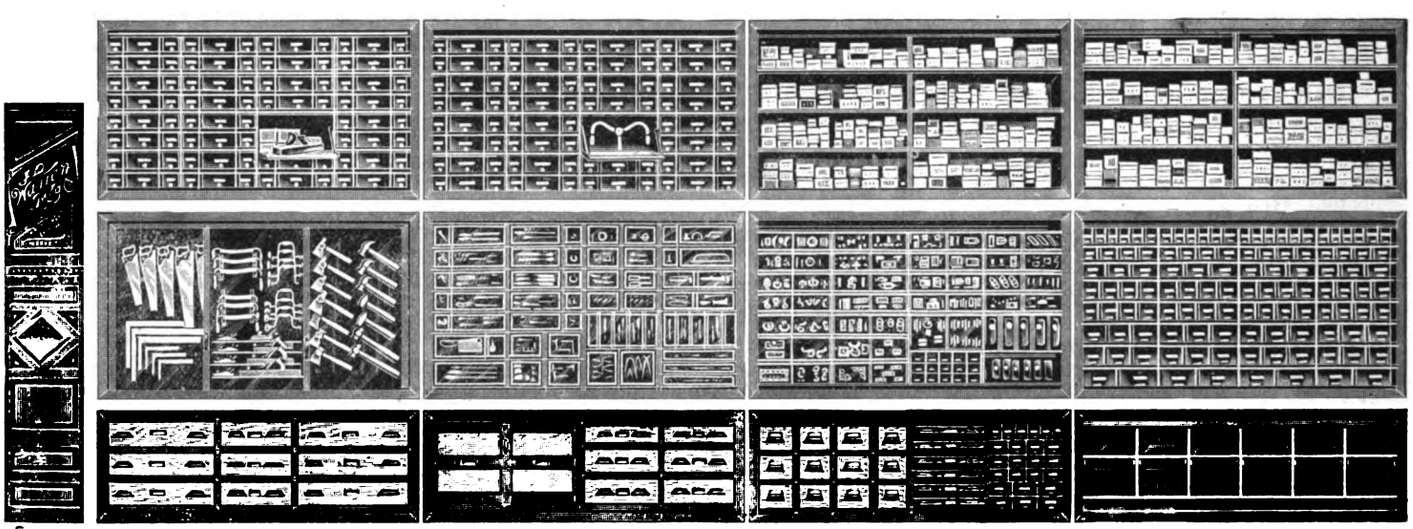
American manufacturers of automobiles are interested in a recent decision by the Supreme Court of the United States to the effect that the patent on pneumatic rubber tires for road vehicles, which was granted in March, 1893, by the Commissioner of Patents, is invalid, and any one may use such tires without fear of being required to pay royalties.

In a report made to the State Department by Consul-General Guenther, at Frankfort, Germany, he says that the total number of people employed in the Krupp works is 41,750, of whom 25,133 are at Essen, 3458 in the Gruson Steel Works of Magdeburg-Buckau, 2726 in the shipyards at Kiel and 10,344 in various smelters and coal mines owned by Krupp.

Nearly all of the jute mills in India are now lighted with electric lights. It was found that the working people could work overtime under much better conditions with increased pay in the electric-lighted mill, and the consequence was that the workmen flocked to the well-lighted mills, so that those mills which opposed the introduction of electric light were forced to provide it.

In 1899 there were built in the United States 123,893 cars, exclusive of those built by railroad companies. In 1898 the total was 105,156, which was the best year since 1890, when 103,000 cars were built. Of the 123,893 cars built last year, 117,892 were for freight and 1201 for passenger service, and 4710 for street railroads; 1904 freight, 104 passenger and 296 street cars were for export. Of the freight cars 10,500 were of steel.

The statement made in some of yesterday morning's papers that the patent rights of the American Bicycle Co. constituted over 70 per cent. of its capital stock is denied. The value of the rights, according to the certificate of the company's condition, filed with the Secretary of State October 1, is $22,000,000. The capital stock is $30,000,000. The president of the company yesterday said the original certificate described the $22,000,000 as among the assets, thus: "Good will, including patents, copyrights, trade marks, etc."



Cast iron horseshoes are manufactured to a considerable extent at Ueckermuende, close to Stettin. The shoes are cast without toes or heels, although heels can be attached, holes being left at the end of the curves for that purpose. A square groove, commencing about one inch from the end of each curve, is found formed in the bottom part of each shoe. This groove is filled very tightly with one piece of three-fourths-inch tarred hemp rope. The wholesale price for any size or shape is 36 marks ($8.56) per 100 kilograms (220.46 pounds). A set of shoes (medium size) weighs 5 1-2 pounds and would cost about 21 cents wholesale.

The Age of Store Improvement.

The largest order ever given for Patent Hardware Shelving has been recently awarded the J. D. Warren Mfg. Co., Masonic Temple, Chicago, by the Gray & Dudley Hardware Co., of Nashville, Tenn., amounting to $7000, being for a complete equipment for the retail department, 55x225 feet, occupying the whole ground floor of their new six-story building. The firm furnished no specifications, placing their confidence solely with J. D. Warren to design and manufacture for them the best outfit his practical experience would enable him to prepare, regardless of expense, consistent with their requirements.

Mr. Warren has been engaged upon the plans for some time, and will also spare neither time nor expense on his part in executing designs in shelving, cases and cabinets which will establish a precedent for the Warren system in Hardware store construction. The building will be modern in every respect, the wholesale departments occupying the upper floors, which will make the retail store a distinctive feature of the house, completed in the most artistic manner. The overhead ceiling stands 19 feet in height, giving magnificent dimensions, splendid light, etc., for the display of stock. The shelving will extend to the top on each side of the room, with extras and mirror effects to utilize center floor spaces, all sectionally arranged to match dimensions, with the Warren

THE WARREN SYSTEM OF HARDWARE STORE CONSTRUCTION.

interchangeable glass front drawer method, provisions for attaching samples, registering prices, recording stock, etc.

The material will consist of quartered oak throughout, finished at the factory ready for setting in place complete. Every item of Hardware in the firm's enormous stock will be provided for before the drawings are finished, shelf goods, builders' Hardware, mechanics' tools, farm and garden implements, etc., occupying their relative positions in minute detail. Numerous devices will be introduced for the first time to illustrate the mechanism and use of different Hardware specialties, such as builders' Hardware, etc.

A new system for registering stock will enable the buyer to locate and estimate the amount or number of articles on hand in any particular line at short notice by simply consulting his register. The fixtures, aside from artistic effect and labor saving features, are being made to maintain extensive capacity and great durability.

The Warren Hardware Cabinets, in their perfect construction, seem scarcely less human than the merchant or salesman, so nicely do they display and keep track of stock. "Adaptation" is the keynote of the inventor and manufacturer in the multiplicities of spaces and compartments constructed for the numerous lines and varying sizes and numbers, each of which is carefully provided for as if it were the only article dealt in by the merchant.

In its complete design it comes to the merchant not alone as shelving, but as an active, live operator, rendering aid scarcely second to any one, and in some features attaining quicker and more valuable results than the single individual, and becoming a part of each salesman's commercial value by doubling and trebling his services, it thus reimburses the original outlay, which sounds large, but is in its valuable experience practical economy.

Trade Secrets in Germany.

According to German newspapers, the German federal court has recently rendered a decision which appears to be of interest to United States Consuls in Germany, as they are frequently requested by citizens of the United States to procure for them all possible information regarding manufacturing processes employed in Germany. It appears that a foreman in the employ of a certain establishment invented a substance which his employer used in finishing "rustling" velvet. The use of this substance was considered a trade or business secret of the firm. The foreman, however, imparted the composition to others, and the firm had him tried under the law of May 27, 1898, entitled "An act for the suppression of base competition" (Gesetz zur Bekaempfung des unlauteren Wettbetriebs). The foreman was found guilty in the lower court.

The case was appealed to the federal court and the defense made the point that the foreman had only imparted his own invention to others; that the same was his intellectual property. The federal court dismissed the appeal on the following grounds:

The foreman was employed as such by the firm, and therefore it was his duty to try experiments by which the methods of work could be improved.

His achievement in inventing the substance was, therefore, only a part of the services which he owed to his employers. The invention belonged to his employers, and therefore the action of the foreman in imparting the secret to outsiders was in violation of the law referred to. Only an employee is intrusted with experiments which may lead to such inventions. A stranger, whose labor does not belong to the establishment, is excluded from such experiments. The foreman was admitted to the experiments only on account of his employment by the firm, and it followed that the invention in question was made by him in consequence of his employment by the firm, for which he was paid.

The Bank of England destroys about 350,000 of its notes every week, to replace them with freshly printed ones. One evening in each week is set apart for the making of this expensive bonfire.—*Ex.*

RECENT TRADE PUBLICATIONS.

STANDARD TOOL CO., Cleveland, Ohio. Pamphlet catalogue of 24 pages, printed on heavy coated paper, and well illustrated, the contents of which are given in three languages, English, French and German, and bears the appearance of having been published for distribution at the Paris Exposition, and would seem to be an admirable catalogue for this purpose, embracing as it does in its contents all their special tools, such as twist drills, reamers, chucks, sockets, taps, milling cutters, and other specialties of a similar character, together with illustrations and descriptions of their spring cotters and flat spring and riveted keys, which are largely in demand for machinery purposes. The artistic excellence of this publication gives every indication of having been carefully prepared by an expert whose work deserves great credit.

GILBERT & BENNETT MFG. CO., 44 Cliff Street, New York. Catalogue No. 147, Eastern edition, in pamphlet form, of 86 pages, 7 1-2 x 10 1-2 inches, and filled complete with their important line of wire goods, netting and fencing, wire cloth and wire work. This is a very complete and important catalogue covering these goods so largely handled by the Hardware trade of the country. The goods are fully illustrated and described throughout, showing various styles of fencing, and illustrating, in addition to the usual line of poultry and other wire netting, lines of Hardware and miners' riddles, oat and mill sieves, druggists' sieves, sand and coal screens, foundry supplies (such as bellows, brooms and brushes), cable clothes lines, wire door mats and spooled wire. Included in the contents is a large variety of flower pot stands, which are well illustrated in this catalogue, also chairs and seats, window guards, desk railings, etc., making it a very important catalogue, which should be in the hands of all dealers handling these goods.

COLDWELL LAWN MOWER CO., Newburgh, N. Y. Among the handsome lawn mower catalogues published in the interest of this line of important specialties, the Coldwell Lawn Mower Co. have given us an extremely artistic and very handsome pamphlet of 20 pages, large size, printed on superior coated paper, in which the illustrations are shown in two colors, reflecting great credit upon the catalogue compiler, and furnishing the most complete information connected with this business that has come to our notice. While all the regular lawn mowers are described and illustrated, in addition to the same they give the extra parts of each machine plainly shown, with the size, the specified number, and the list price. This is a most important feature for the dealer handling this class of machinery, making it easy to obtain repairs, and avoiding the annoyance of delays, which is often the case. They also show fine illustrations of the various universities, colleges, etc., where the Coldwell Lawn Mower has been in use for a number of seasons. These are taken from photographs, which present an admirable appearance in the setting given them on the pages. They also issue in connection with the larger catalogue a smaller one in which many of the illustrations given in the larger catalogue are shown in miniature size, the regular trade price lists being given as well, it being intended more particularly to exploit the merits of the "Imperial" lawn mower. The artistic feature of the smaller catalogue is shown in the combination of cupids manipulating in various ways the lawn mowers constructed by this company, and illustrated in the pages of this catalogue. This is a very novel feature, and will attract attention wherever shown, and was an extremely happy thought to be used for advertising purposes.

LIBERTY BELL CO., Bristol, Conn. Booklet of eight pages, giving their catalogue for 1900 on a line of Liberty and Standard bells, fully illustrated and described, including list prices, etc.

SAMUEL WINSLOW SKATE MFG. CO., Worcester, Mass. Catalogue of 16 pages calling attention to the line of roller skates manufactured by them, which are illustrated in this catalogue in full variety, with complete descriptions and list prices.

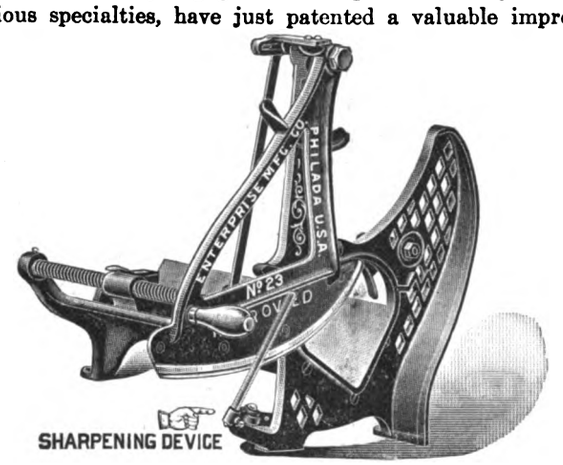
UNION METALLIC CARTRIDGE CO., Bridgeport, Conn., and 313-315 Broadway, New York. Price list dated May, 1900, in pamphlet form, covering 56 pages, applying to their entire product, covering primers, gun wads, percussion caps, metallic cartridges, empty and loaded paper shells, brass shot shells, etc.

E. I. DU PONT DE NEMOURS & CO., Wilmington, Del. Booklet of 14 pages on their well-known Du Pont gun powder, giving a price list and description of their product, showing the various grains of different styles. This is very artistically prepared, with attractive covers, the contents printed in two colors showing considerable merit in its compilation.

S. WILDER & CO., Holliston, Mass. A catalogue and price list in leaflet form of their line of copper pumps, etc., with list prices and full description, consisting of copper top pumps, with stationery top, iron top pumps, air chamber pumps with iron top, flange force pumps to screw to shell, and with all the various parts necessary for the proper repairing of the same.

CLEVELAND GALVANIZING WORKS, Cleveland, Ohio. Pamphlet catalogue of 16 pages, covering their line of galvanized specialties, including pump chain, rubber buckets, lightning rod fixtures, etc. They are also large manufacturers of white metal pattern letters, which are shown in this catalogue in great variety. They are made of metal that can be fastened to patterns with gum shellac, and can be bent if necessary, or brads can be easily driven through them without destroying the outlines of the letters.

STOVER MFG. CO., Freeport, Ill. Pamphlet catalogue of 40 pages, covering a line of builders' Hardware, shelf Hardware and Hardware specialties; including their double-acting spring hinges in plain and ornamental patterns; push plates, spring hinges in large variety, sash locks and sash pulleys. Included in the contents of the catalogue, which is printed on excellent paper and finely illustrated, will be found a number of testimonials printed in facsimile from gratified users of their various specialties, making interesting reading.



NATIONAL CUTLERY CO., Philadelphia, Pa.; C. E. Jennings & Co., agents, 101 Reade Street, New York. Pamphlet catalogue of 32 pages, covering their line of first-class steel-laid shears, scissors, snips, etc. These are made in a very complete variety, including straight and bent trimmers, barbers', bankers' and paper shears, also office or desk shears. They also manufacture a large line of shears of the "No Joint" pattern. They likewise manufacture a line of ladies' scissors and shears, pocket scissors and leather shears. Included in the contents is an extensive assortment of dental shears made in various styles, and all of superior quality. They also make a lower-priced line of regular goods, which is referred to under the name of "Eureka," covering many varieties. They are the manufacturers of the National orange clipper, dental snips and tinners' snips.

NEW GOODS AND SPECIALTIES.

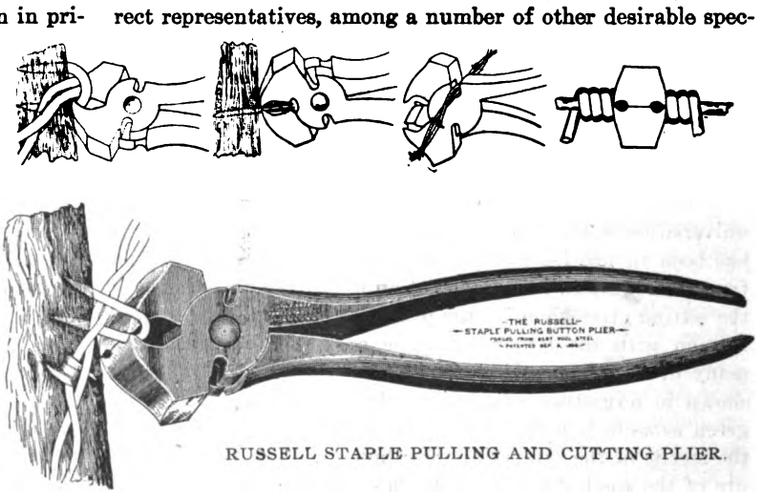
Enterprise Smoked Beef Shaver.

The Enterprise Mfg. Co., of Philadelphia, Pa., U. S. A., who are constantly engaged in adding to the utility of their various specialties, have just patented a valuable improvement to their Dried Beef Shavers Nos. 23 and 24. It consists of an automatic sharpening device, which can readily be understood, by a glance at the illustration, which is presented herewith. Past experience has taught the user that the blade of a beef shaver becomes dull after very little use, and, while he may understand thoroughly how to sharpen an ordinary knife, it requires a great deal more skill to sharpen the one which is an essential adjunct to a dried beef shaver. This has formerly been done in a primitive way with an oil stone, and frequently the blade has been taken out and sharpened by a traveling scissors grinder, who, from lack of intelligence, usually does more harm than good. The automatic steel, which forms the present improvement, sharpens the blade at a proper angle. It can be thrown instantly in or out of operation as desired, and being constructively an attachment to the machine, cannot be lost or mislaid. The feeding device has also been simplified in its method of construction by which it has been greatly improved.

IMPROVED SMOKED BEEF SHAVER.

Drop-Spout Tea Kettle.

The Central Stamping Co., 25 Cliff Street, New York, are engaged in manufacturing an entirely original style of tea kettle, which has been successfully experimented upon in private during the past three years, the result of which has been universal approval. It is constructed in a unique manner, which enables one to pour boiling water without lifting the kettle, although if desired it can be used in the ordinary way. In Fig. 1 is given an illustration of the kettle as it appears when placed upon the top of the range, showing how it can be used like an ordinary tea kettle. Fig. 2 illustrates the improved manner of its use, showing that the spout can be adjusted to deliver water without raising the kettle in the slightest degree. The spout is fed at the bottom by two asbestos-packed tubes, the joints of which, it is said, will last for a term of years, but which, if necessary, can readily be tightened at any time. At the top of the spout are two enameled wood knobs with a hook attached, by means of which the spout is kept upright against the body of the kettle. To draw the water, either of the knobs may be given a slight turn to lift the catch, and the spout drawn down as shown in Fig. 2. This would seem to be a veritable improvement over the old-fashioned kettle, and should commend itself to housekeepers. The kettle is made of 16-ounce copper, nickel-plated and burnished, has a flat bottom nine inches in diameter, is made in No. 8 size, and in marketing it will be indicated by the trade number 888.

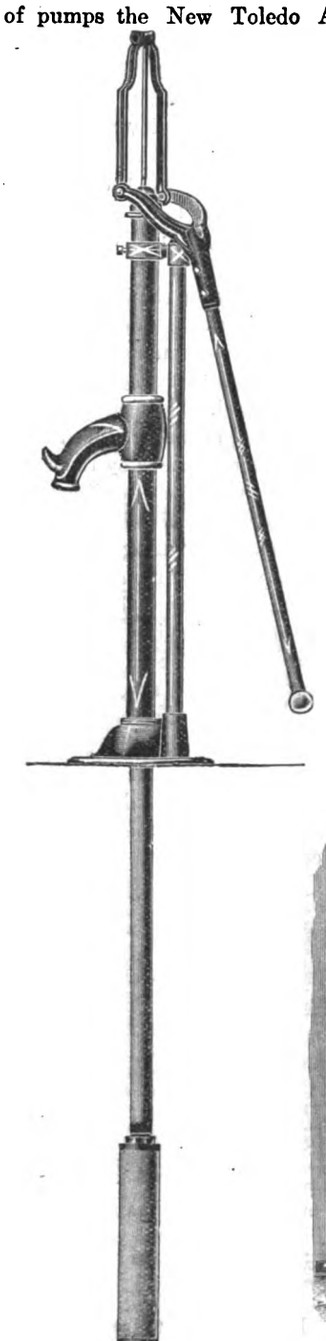


DROP SPOUT TEA KETTLE, FIG. 1.

DROP-SPOUT TEA KETTLE, FIG. 2.

Russell Staple Pulling and Cutting Plier.

The Utica Drop Forge & Tool Co., Utica, N. Y., for whom the Smith & Hemenway Co., 296 Broadway, New York, are direct representatives, among a number of other desirable specialties, are manufacturing the Russell Staple Pulling Button Plier, which we illustrate herewith. (Fig. 1). In the construction of this desirable article there are a number of features making it superior to anything of this character made previously by this company, as well as the fact that it is now



RUSSELL STAPLE PULLING AND CUTTING PLIER.

Digitized by Google

made of a finer quality of stock and greatly improved in finish. The head of the tool has been improved in shape, so that depressions and uneven places, which are usual in posts, trees, etc., can now be readily reached in order to withdraw a staple or nail. There are two devices for staple drawing, one on each side of the head. The tool can also be used to drive or pull a staple or nail, both sides of the head being suitable for the purpose, forming a satisfactory hammer. It can also be used to cut wire on both sides of the rivet; it will splice or straighten wire; can even be used as a wrench on small nuts; it forms an admirable pincer, and will readily tighten wire. It is, of course, designed more particularly for putting up, removing and repairing barb wire and other fencing of like character, used in farm and railroad fence. In Fig. 2 is shown a few of the uses for which it is intended, among them pulling staples and nails, cutting barb wire and method of applying.

New Toledo Anti-Freezing Force and Lift Pump.

The Standard Mfg. Co., Toledo, Ohio, have added to their well-known line of pumps the New Toledo Anti-Freezing Force and Lift Pump, which meets a specified demand for a pump of this character. It is provided with a 10-inch stroke, and is suitable for any kind of well. It can be furnished three inches and larger in diameter and up to a depth of 200 feet. As will be noted in the illustration given herewith, the fulcrum rests on the base of the pump, enabling it to work with comparative ease ,and greatly lessening any ordinary liability to get out of order.

NEW TOLEDO ANTI-FREEZING FORCE AND LIFT PUMP.

Myers "Stayon" Flexible Door Hanger.

F. E. Myers & Bro., Ashland, Ohio, are placing upon the market and introducing through the Hardware and implement trade, what is claimed to be the greatest improvement over the ordinary door hanger that has been brought to the attention of the trade in a long time. It is marketed under the name of the Myers "Stayon" Flexible Door Hanger. Among the improvements noted, the hanger is so constructed that when once in position it is extremely difficult to throw it off the track no matter how roughly it may be handled. The lug A shown in Fig. 1 locks over the under side of the steel rail, thus fixing it firmly and preventing its being thrown off. This is

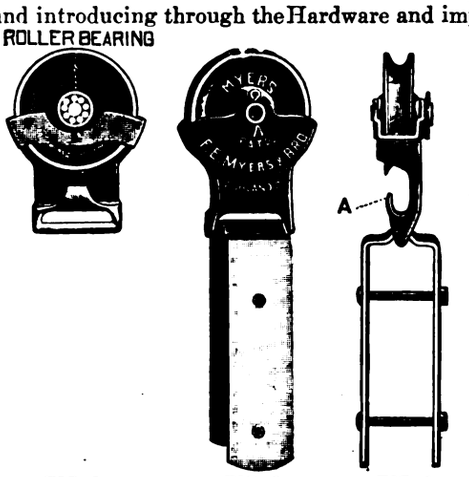


FIG 3. FIG. 2. FIG. 1.

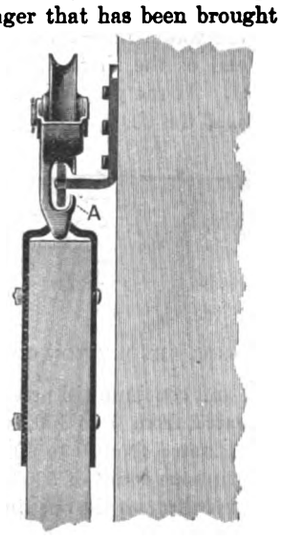

FIG. 4

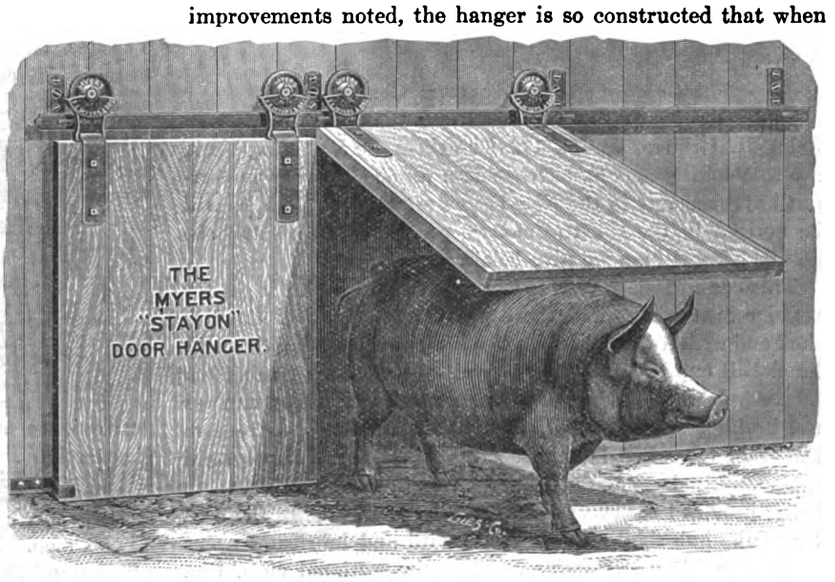

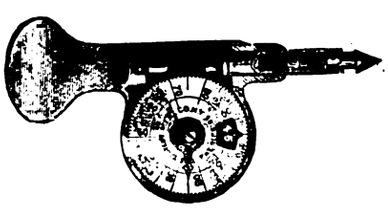

FIG. 5.

Digitized by Google

undoubtedly an important feature. It is constructed with roller bearings, see Fig. 3, and is attached to the door by a steel strap clamped over the top of the door, extending down on each side and bolted through, see Fig. 4. The material is malleable iron and steel. In regard to its flexibility the hanger is provided with a loop joint between the wheel and the top of the door, which permits each door to be raised or shoved outward independent of the other, which is a feature not found on any other door hanger (See Fig. 5). By aid of the stay roller, when desired the door can be held perfectly rigid. This flexible feature prevents binding when door is warped or the side wall of the barn is crooked. The steel track used in connection with this hanger is manufactured of a special grade of stiff steel 3-16x1 1-4 inch, and supported by a rigid bracket having a square shoulder mortised through the track every 17 inches, thus making a very substantial fastening, and adding materially to the stiffness of the track, possessing more than twice the strength of the ordinary track.

The Tabor Revolution Counter.

The Tabor Mfg. Co., Elizabeth, N. J., have long held the market on the popular specialty for the purpose which we illustrate herewith. There had always been an urgent need of a good, simple, stop motion, revolution counter, that could be put upon the market at a price low enough to be within the reach of all mechanics. In using the counter it is only necessary to hold the watch in one hand, and lightly touch the centre in the end of the shaft to be counted, with the three-cornered point. At the proper instant, by the watch, a quick pressure against the shaft will engage the clutch and

THE TABOR REVOLUTION COUNTER.

counting will begin and continue till pressure is relaxed. The upper dial is graduated from 0 to 100, and registers units; the lower dial is graduated from 0 to 50, and registers hundreds, making a continuous count of 5000 possible. The reading on the under dial is through the opening in the upper dial. The index finger indicates the count on the upper dial; for instance, if the point in the opening through the upper dial indicates 45 on the lower dial, and the index finger points to 25 on the upper dial, the reading will be 4,525 revolutions. They can be sold at a moderate price and pay the dealer in supplies a good profit.

The Improved New Departure Coaster Hub.

The New Departure Bell Co., Bristol, Conn., for whom John H. Graham & Co., 113 Chambers Street, New York, are sole selling agents, have made a number of very important improvements in the New Departure Coaster Hub, as will be noticed in the illustrations we present herewith and the detailed description we give below.

This coaster, see Fig. 1, is now constructed with flanges for regular bent spokes and the cap is made a part of the hub shell and with it turned from the solid bar. Removing the right hand ball cup permits the removal of the entire mechanism of the hub while lifting off the arm and cover to cap exposes the braking apparatus. It is not now necessary to remove the brake cap when lacing hub into wheel nor is any special spoke required. Regular bent spokes are used, ball retainers being provided for every bearing and the oil hole in the center of the hub shell communicates with and lubricates every bearing and braking surface. From the sectional view, Fig. 2, the mechanical arrangements will be more readily observed. The ball retainers at the right are shown full size; the ball retainer in the brake cap is omitted to show the construction of brake clutch at this point. The chain pulls sprocket "G" forward, carrying with it the threaded driver "E" upon which it is mounted. The end of driver is cut away at right to show method of seating sprocket. Upon this driver is mounted the double cone "D" traveling upon spiral threads, as shown. When driver is rotated forward, this sleeve travels to point indicated by dotted line, bringing it into frictional contact with clutch "F," fixed to hub. This causes hub to rotate and the wheel to move forward. When wishing to coast, hold the feet still on the pedals. Sprocket

FIG. 1.

"G" and driver "E"' then remain stationary, and cone "D" follows its spiral thread to the left to position shown in cut. The wheel is now free to coast and will do so while the feet are held still upon the pedals, or if feet are removed. To slacken speed of wheel, bear down upon rear pedal; this forces "D" into engagement with clutch "C," which tends to rotate backward, but striking against the pawl "L" in brake cap, opens the spring until it touches the interior surface of the cap, thus causing frictional resistance and checking the speed. When sufficiently checked, let up on the back pressure; the parts resume the position shown in cut, and the wheel will coast again. Wishing to go ahead, simply pedal forward in the usual manner. So soon as this is done the sleeve "D" passes over to right into engagement with clutch "F" and pulls the wheel forward. It is particularly claimed that there is not a single lateral strain produced and every bearing can be adjusted to the finest degree by the cone on right hand end of axle exactly as is the case of ordinary hub. Removing the ball cup "F" allows all parts to be withdrawn when necessary. All motions are entirely automatic, absolutely free action being possible in all positions, and this while the pedals are firmly in gear at all times. Hubs are furnished in 1 1-2, 1 5-8 and 1 3-4 inch chain line, and with 7, 8, 9 or 10 tooth sprockets, either 1-8, 3-16 or 1-4 inch, 32, 36 or 40 spokes. When sent from factory the sprockets are purposely left loose so that a change of gear may be made by hand. A wrench fitting every part is packed with each coaster. The manufacturers state that deliveries of the new model hub will begin June 1, and orders will be filled in turn from the new stock. The new arrangements with the trade will enable the dealers to meet any call from their stock and add immensely to the

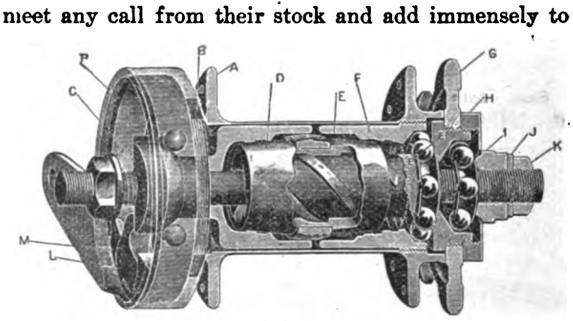

FIG. 2.

convenience and profit of handling the New Departure Coaster Hub.

In France's navy there are 45 admirals to 1760 officers and 21,536 men. In the army there are 330 generals to 41,488 officers and 540,000 men, while the marines have 17 generals to 2105 officers and 52,305 men. The marines complain of the inequality in the proportion of generals, they having but one to about 124 officers, while the army has one to 65.—*Exchange.*

REVIEW OF THE MARKETS.

Hardware. While the manufacturers generally of special lines of Hardware realize that the end of the Spring season is making rapid progress, the general traffic keeps up fairly good on all staple requirements, and but little complaint is heard in regard to the volume of business as compared with that of last year. The feeling is general that prices bid fair to be maintained, except on a group of products which have been unduly advanced in price, because they were based on costs of materials which seemed to get higher in value with every succeeding month. The trade believes that particular time has passed, and the prices that have been advanced prematurely to some extent, might as well range along with quotations that are more in accordance with trade conditions of the present.

Builders' Hardware. This important line has been affected by the agitation of the questions disturbing organized labor in many cities, the most of which have been adjusted with no more serious results than a loss of valuable time, and the holding up of orders which should have gone forward to complete improvements already under way. The weather we are now enjoying is of the most favorable character for this purpose, and renewed energy has lately been shown, through which it is believed a solid improvement in this line of work will be one of the features of the season's business. It is the general impression that prices in this great line of artistic manufactures are much higher than they really are when compared with those prevailing a year ago; and less hesitation to purchase special requirements would be manifested if these comparisons were made.

Wire Nails. The demand for wire nails keeps up in extremely good condition. Stocks having been light throughout the country, the manufacturers now feel the benefit from making low quotations. No doubt exists but what the surplus stock is rapidly disappearing, and if the condition regarding raw material only gave sufficient excuse a slight advance in price might be looked for at an early date. Present quotations are as follows, f. o. b. Pittsburgh, terms 30 days or 1 per cent. off in 10 days:

To jobbers in carload lots	$2.20 base.
" in less than carload lots	2.22½ "
To retailers in carload lots	2.35 "
" in less than carload lots	2.45 "

New York prices consistent with above quotations are held firmly at the following quotations:

To retailers, carloads on dock	$2.53 base.
" less than carloads on dock	2.66 "
Small lots from store	2.75 "

Cut Nails. Cut nails are selling with greater freedom than previously existed, the demand being a very fair one for this product. The fact of there being less difference in price than previously existed, makes but little difference in the comparative sales. Present quotations are, f. o. b. Pittsburgh, terms, 30 days, 1 per cent. off in ten days:

Carload lots	$2.05 base.
To jobbers in less than carload lots	2.10 "
To retailers in less than carload lots	2.20 "

New York prices are quoted as follows, based on above:

To jobbers in carload lots on dock	$2.23 base.
" less than carloads on dock	2.28 "
To retailers in less than carload lots on dock.	2.41 "
Small lots from store	2.50 "

Barb Wire. The demand for barb wire keeps up in good shape. The reduction in price occurring later in the season than was desirable, for heavy transactions has not prevented the season's sales from showing good results. Already the supply at the mill is reaching a condition that makes prompt shipments not always possible. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 30 days or 1 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.65
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.67½
" " " Galvanized.	2.82½
To retailers in carload lots, Painted	2.80
" " Galvanized	2.95
To retailers in less than carload lots, Painted	2.90
" " " Galvanized.	3.05

Ellwood & Baker Wire is 5 cents higher, and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices named above.

Plain Wire. The market on plain wire is well sustained by the amount of business done, which has been unusually good since the decline and with prices exceedingly firm. The quotations for immediate specifications and prompt shipments, subject to withdrawal without notice, are as follows, f. o. b. Pittsburgh; terms, 30 days or 1 per cent. discount for cash in ten days:

	Plain.		Galvanized up to No. 14.	
To jobbers in carload lots	$2.15	base.	$2.55	base.
" less than carload lots	2.17½	base.	2.57½	base.
To retailers in carload lots	2.30	base.	2.70	base.
" less than carload lots	2.40	base.	2.80	base.

Galvanized Wire Nos. 15 and 16 is 75 cents advance on Plain, and Nos. 17 and 18 $1 advance on Plain.

Market and Other Wires. The American Steel & Wire Co. have recently announced the following revised quotations governing their line of Market Wire, together with a corresponding reduction which has been made in the whole line. The quotations given herewith represent a range of discounts in accordance with quantity requirements:

BRIGHT AND ANNEALED.

Nos. 6 to 9	70 & 10 @ 75%
" 10 to 18	72½ & 5 @ 75 & 5%
" 19 to 26	75 & 7½ @ 75, 10 & 5%
" 27 to 36	75, 10 & 2½ @ 75, 10 & 10%

COPPERED AND GALVANIZED.

Nos. 6 to 9	70 @ 70 & 5%
" 10 to 18	70 & 10 @ 75%
" 19 to 26	72½ & 5 @ 75 & 5%
" 27 to 36	76½ & 5 @ 70 & 2½%

TINNED.

Nos. 6 to 14	70, 10 & 5 @ 75 & 5%
" 15 to 18	70, 5 & 5 @ 70, 10 & 5%
" 19 to 26	70 @ 70 & 10%
" 27 to 36	65 & 10 @ 70 & 5%

No changes are announced on special wires, prices of which remain as previously quoted. Neither does the change affect Spring and other tempered Wires, Tinned Mattress or Broom Wire or fine Weaving Wires. The increased confidence imparted by the reductions made, has resulted in a good business being done, affecting all the lines, whether lately reduced in price or otherwise.

Drop Shot, Etc. Under date of May 21, Tatham & Bros. announce the following revised prices in Drop Shot, etc.:

Drop Shot, sizes smaller than B,	25 lb. bag.	$1.40	per bag.
Drop Shot, B and larger sizes,	" "	1.65	"
Buck Shot,	" "	1.65	"
Chilled Shot,	" "	1.65	"
Dust Shot,	" "	2.10	"

Terms—Net cash 30 days, or 2 per cent. discount will be allowed for cash remitted within 10 days of invoice date. Discounts on ton lots as usual; 10 cents per bag of 25 lbs.

Corner Braces. John H. Graham & Co., 113 Chambers Street, New York, have been made selling agents for the McClellan Corner Brace, which is meeting with a large sale for electricians', plumbers', steamfitters' use, etc. They are made in two sizes, Nos. 1 and 2 at $36 and $40 respectively, from which there is a discount to the trade of 25 and 10 per cent.

Martin's Casters. The Phoenix Caster Co., John H. Graham & Co., 113 Chambers Street, New York, selling agents, owing to the advance in price of lignum vitae, have been compelled to raise the list prices on Martin's casters with lignum vitae wheels, 5 cents per set over the price of iron wheels, discounts remaining the same.

Digitized by Google

Sheet Brass, Brass Wire, Etc. Under date of May 9 the manufacturers of sheet brass, brass wire, etc., made a slight advance over their previous quotations, their prices being now represented by the following discounts, terms net cash in 30 days, or one-half per cent. discount for cash in ten days:

	Discount, per cent.
Sheet Brass, Brass Wire and Brass Rod	20
Brazed Brass Tube	35

Spring Cotters and Flat Spring Keys. Manufacturers of these goods have recently advanced prices on the same, and the present discounts are as follows:

5-16 and smaller	80 and 20 off.
3-8 and larger	70 and 10 off.

Cordage. The demand for rope is this season of a backward character. The following represents the present market, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger	per pound,	14½	cents.
" ⅜ inch	"	15	"
" ¼ and 5-16 inch	"	15½	"
Sisal, 7-16 inch and larger	"	9½	"
" ⅜ inch	"	10	"
" ¼ and 5-16 inch	"	10½	"
" Lath Yarn, medium and coarse	"	9½	"

Manila Tarred Rope, 15-thread, 14 1-2 cents. Manila Hay Rope, medium, 14 1-2 cents. "A" grade of Jute Rope 7 1-2; "C" grade 7 cents. Jute Wool Twine, 4 ply only, per pound, 7 cents; all other sizes, 7 1-2 cents.

Binder Twine. The following quotations are made on Twine, f. o. b. New York, Philadelphia or Boston, with a reduction of 1-4 cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of 1-2 cent per pound for carload lots:

White Sisal, 500 feet to pound	11 cents.
Standard, 500 feet to pound	11 "
Manila, 600 feet to pound	14 "
Pure Manila, 650 feet to pound	15 "

Linseed Oil. Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels .....66 cents per gallon.
In lots of 5 barrels or more .....65 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

Snell Mfg. Co., Fiskdale, Mass., issue the following discount sheet, to apply to their latest catalogue. Terms, 30 days, less 2 per cent. for cash in 10 days.

Angular Boring Machines, each	$3.00 net.

THE CLEVELAND TRADE.

As civilization advances there is an increased avertion to extremes. One extreme follows another as a protest against them. Without combinations, no such extreme prices as we have recently had could have been possible. If it is well to fail young, our lesson may prove valuable. The country could hardly be in better condition to meet a halt; there is nothing for a panic to feed on and recovery is likely to be rapid.

So sudden a shock to business has not occurred before in our generation; mills are being closed, thousands of men thrown out of work in the very face of a frenzy for strikes for increased wages. The second and third quarter of the year seems to promise serious disappointment. Emerson's statement that we ought to live as though to-morrow might be doomsday seems to have been a good rule.

Perhaps the lesson is worth the cost and may save us a greater calamity, as this experience should prevent future evil. The lesson for combinations is: that to serve the public is to serve themselves, and that the "gates" of Wall Street must not manipulate the finances of our industrial life.

Nothing can be more unfortunate than impaired confidence in the integrity of masters of industry, and the leaders of finance are not likely to permit dishonorable practices to go unrebuked. Morality in business is neither dead nor sleeping; there is no reason for despair; the country has already commenced recovery from the shock, and we can wait in confidence in our ability to meet any demands that are likely to be made.

The Presidential campaign will likely interfere with business, but this is a quadrennial disease and must be endured as the price of government by the people. The tendency to emphasize evil is temporary; the experience of long business life teaches that bad times are succeeded by good ones, and that persistence is essential to success. The good is sure to predominate; pessimism has no place in a business creed.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE BIRMINGHAM TRADE.

The action of the American Steel & Wire Co. in suddenly and violently reducing the price of wire and nails has been the most impressive event in the Hardware trade for many days, and it has produced the effect of checking trade in their own goods as well as other lines in this locality. The general impression is that this is fair warning that no goods will advance, with the greater probability of a further decline in other lines and hence the disposition to reduce stocks and buy as lightly as possible to meet present demands only. Other lines have shown some weakness, but not so radical as wire and nails. It is generally conceded that these items were out of proportion and too high, and would stand a heavier decline, even in order to get in proper line. If the trade report correctly, it seems that the management of the American Steel & Wire Co. did not foresee the heavy reduction which took place, since they were offering their product with the statement that the market was firm with the possibility of a further advance and in a very short period of time discovered the necessity of a radical reduction with but few, if any, precedents. It is well that such management should resign and give place to others, who it is hoped will profit by the lesson they have taught. This demonstrates that these large consolidations should be directed by wise business men who have some regard for the rights of others, for their action does not stop with themselves, but affects the trade and the products in all kindred lines. We had thought that since the business of the country was in practically a few hands, that we were the more safe from violent fluctuations that might destroy many, but it now appears that we were mistaken since some of the heads appear not to care so much for the rights of others. This action, we fear, will make it all the more important for the managers of these consolidations to act with prudence, lest they soon project a panic. We are glad to say that we are not looking for disastrous action, but prudent and conservative action, but we do see the possibility. We still have much of the vitality of the business of the last twelve months, and if we must descend to a lower level, we hope to do so gradually and not all at one leap. We regret to see the unrest among laborers throughout the country which is the product of prosperity, but which will do much, we fear, to hasten the return to conditions not so satisfactory. Much work is checked in our midst on account of the carpenters. Notwithstanding they were doing well, they want to force higher wages and shorter hours. Much of this kind of action cuts off the demand for material and produces stagnation in the markets and allows a surplus to accumulate and reduces the prices and hastens the return to conditions of '96 to '98.

MOORE & HANDLEY HARDWARE CO.

THE PITTSBURGH TRADE.

At present price of fence wire the farmers are taking hold, and as they held back so long, all want it at once. Factories are slow in shipping, so there could not have been such an overstock as stated. Retailers should have patience with their jobbing houses under the circumstances, for they are doing everything in their power to accommodate. General trade has been very good in Pittsburgh this month, the cold weather of April delayed some business which has been pushed into May, crowding the jobbers to their capacity. Recent hot weather has made a big demand for refrigerators, freezers, screen doors, etc.

Reports of large contracts for steel placed with our manufacturers recently, showed renewed confidence of buyers in present rates, and induced further buying, which has been held in abeyance. We look for a large business during the year, although temporary checks occur at times. Pittsburgh is forging ahead in her manufacturing interests, and streng-

Digitized by Google

thening her position by replacing all old style plant with the most improved machinery. LOGAN-GREGG HARDWARE CO.

THE CHICAGO TRADE.

Late information seems to indicate that members of the Shovel Combination have been able to purchase all the principal outside factories that have been disturbing the market of late. It will, therefore, make prices more uniform on this line of goods, and because of this improvement, customers are now buying freely of scoops and shovels for Fall use.

Indications also point to an early setlement of strike difficulties in Chicago. The morning papers state that journeymen plumbers have commenced work, and in case mechanics in general become employed, the demand for Builders' Hardware will become very strong.

There is a good demand for most all classes of Hardware from country trade, and while we are making some concessions in prices, where manufacturers have given us a chance to do so, values as a rule have not been altered to any great extent.

Screen doors, window screens and some sizes of wire cloth are hard to secure from the mills as fast as we can sell them. We look for a still stronger demand as soon as the weather becomes a trifle warmer.

Nails and barbed wire, as well as fence staples and annealed wire are in very active demand. We are now at very much of a loss to see clearly the position taken by Mr. Gates a month ago, from the fact that the American Steel & Wire Co. are so driven with business that they claim they cannot fill orders now in their hands that are three weeks old.

We have not experienced so active a demand for barbed wire in twelve months' time. WELLS & NELLEGAR CO.

THE COLUMBUS TRADE.

There have been but very few changes in the condition of the market or trade since our last report. We have had fine rains in this immediate vicinity, which were badly needed, but some sections in Ohio have not been so blessed. Trade is very active for seasonable goods and we are kept busy early and late trying to keep up with our orders. The demand for rubber hose has been very heavy, also for refrigerators and screen goods. Wire and nails are also in good demand. Judging by some of the stock sheets sent out to the trade by some jobbers, they must be badly scared, and it looks more like a case of buncomb than anything else, as some of the surplus stock they offer at 10 to 15 per cent. below what they could be replaced for, would not make a decent retail stock. Possibly they are going out of business.

It is strange how constant talk in one direction will bring about the very thing to be avoided. Every time a jobber sends a cut price on an article, it makes the buyer afraid, not only of that article, but every other article in his line, and no one will buy a dollar's worth more than he thinks he needs, even at a cut price. You can talk a man sick by continually telling him he looks bad. You can also talk business sick by continual price cutting. Both the well man and the good trade will suffer by such a course. Prices on most lines are not out of reason and no burden to the consumer, and it is to be hoped that dealers will get a little stiffening in their spinal column and sell goods for what they are worth. If prices become demoralized, wages will surely follow, and that is not a desirable thing for anyone. When the men who make Hardware and the mechanics who use it get good wages, they will not complain of what might be termed high prices. There is no doubt that a few articles are above what should be a legitimate price, and these will no doubt be adjusted by force of circumstances, but a general slump all along the line is neither desirable nor profitable. If it does happen, price cutters can take a large share of the credit. It is to be regretted that many must suffer for the folly of the few.

THE SMITH BROS. HARDWARE CO.

THE DAVENPORT TRADE.

The rush of trade on barb wire has completely demoralized the stocks in the hands of jobbers, and if any of them have a fair stock on hand they are in a position to demand and obtain a price far above the printed market quotations for prompt deliveries. The prolonged period of bad weather during the latter part of Winter and early Spring held back trade that fell on us like an avalanche when the warm weather appeared and country roads became passable. General Hardware is in good demand and collections are improving. SICKLES, PRESTON & NUTTING CO.

THE MINNEAPOLIS TRADE.

It is hardly necessary to say that we were surprised at the action taken by the American Steel & Wire Co. in reducing price on nails and wire. While possibly the price was too high, and at some time some action of this kind would have to be taken, from our point of view it hardly seemed necessary to do this in the midst of the season when the trade had a round stock of goods on hand and this action would affect ad-

SOLD BY ALL HARDWARE DEALERS.

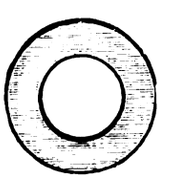
versely nearly all other lines. It has already done a great deal to discourage business with us and has affected quotations made by our competitors on other lines of goods that are also high in comparison with prices that were prevailing 12 to 18 months ago. We refer particularly now to screws and bolts. There is still the same local difficulty about selling price of nails out of store. Some parties seem to feel that their nails are not worth quite as much as other dealers' nails are and in consequence they must quote from three to five or ten cents per keg below prevailing prices. We cannot see what possible object there is in this. We do not like to admit that our goods are not worth as much to us in our trade as our competitors' goods are, especially in staple lines where there can be no difference in the quality.

Trade generally is fairly good. We are comfortably settled in our new quarters, although it will take many weeks yet to get everything adjusted quite to our satisfaction. We have already felt the increase in the retail business, not yet quite to the extent that we anticipated, but are quite confident we will finally reach our anticipations.

Weather conditions have been quite favorable, rather warm in April, we believe the warmest April for 36 years. Cooler now and we need rain. Saw mills have started up with every prospect of an exceedingly good run. W. K. MORISON & Co.

THE ST. PAUL TRADE.

We are pleased to report that the Hardware market here is in a very satisfactory condition. The volume of business since the first of the year has been very large, and with few exceptions, prices have been well maintained. Compared with last year, there has been a large falling off in carload sales of wire and nails, but this has been, to a large extent, covered by sales of small lots. This is more satisfactory, both to the jobber and to the retailer, as it brings these lines nearer to a cash basis than when sold in carlots, as many dealers who buy in carlots are obliged to wait until they turn the goods before they can pay for the same.



The weather conditions so far have been entirely satisfactory to the farmer, the ground having been in good condition to receive the seed, but some anxiety is now being felt as rain is beginning to be needed in some localites. This, however, is largely "borrowed trouble," as up to the present time no real damage has occurred.

As a rule, a spirit of confidence prevails among all classes as to the business outlook. Occasionally a timid man is met with who, remembering that this is Presidential election year, and knowing that in the past the uncertainties of the outcome of the election have caused more or less of an upheaval in business affairs, is disposed to recommend a conservative and careful course to be pursued, but the average man believes that there will be no change in the administration of the affairs and that another four years of prosperity are before us. THE SAN FRANCISCO TRADE.

A minority of the retailers visited report "trade very quiet; people out in the country summering," the majority said: "Trade is coming our way all right; May business with us is ahead of last year at this time." And the voice of the jobbers was as one in characterizing the present trade movement as "very good, indeed, particularly the interior and insular trade." Both of the latter two classifications were as a unit in speaking in glowing terms of the Cape Nome and Cape York trade.

Physically speaking, everybody in the trade is reported well, with one exception; Frank H. Ellis, President of the Palace Hardware Co., who has been a home patient several weeks, and a few days ago accepted his physician's advice and went with escort to Adams Springs, a health restorative spot of note in Northern California, where it is hoped and believed by his many friends that he will soon regain his lost health and strength.

The Hardware trade, both jobbing and retail, is pointing with pride to last month's report of the San Francisco Board of Trade, an exhibit showing 26 business firms in California, Oregon, Washington and Alaska in financial distress and only two of these representing the Hardware trade, and these two with a settlement record exceptionally satisfactory to creditors and void of all prejudice, as follows:

Gilger & Son, Santa Paula, Cal.; liabilities, $1458.27; cash settlement at 92 1-3 per cent., and E. P. Frost & Co., Inc., Paso Robles, Cal.; assets, $14,619.35; liabilities, $7187.07. Settlement on 100 per cent. basis, 10 per cent. cash and indorsed note for balance, payable in 10 monthly installments, commencing August 1, 1900. Note held for creditors by Miller, Sloss & Scott. TRADES PRESS ASSOCIATION.

New England Hardware Dealers' Association.

The regular monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, at 5 p. m., on Wednesday, May 9. It was very largely attended, and even more than the usual interest was manifested in its proceedings. Following the dinner, which is regarded as one of the important features of the gathering, the president, George W. Burditt, received the reports of the several committees who had been considering the various subjects discussed at previous meetings. The records of the last meeting were read by Secretary Farless, after which D. Fletcher Barber, chairman of the pricing committee, made the following report, which was adopted after some discussion by the members present:

"The pricing committee of the New England Hardware Dealers' Association, in view of the fact that the Association includes members from so many different localities, beg leave to report that in their opinion it is inexpedient to submit any schedule of prices for action as an association."

Speaking for the committee of five appointed by the executive committee at the previous meeting to arrange some plan by which the differences between the manufacturers and the retail Hardware dealers could be adjusted, J. B. Hunter of the committee reported a resolution having reference to this object, which was unanimously adopted, and was ordered to be mailed to the manufacturers of builders' Hardware doing business in New England.

On motion of D. Fletcher Barber, the following resolution was unanimously adopted:

"Resolved, That the New England Hardware Dealers' Association express their disapproval of the action of the American Steel & Wire Co. in making such a radical deduction from the price of nails as they have, the result of such action being far reaching in its effect upon our and other kindred lines of business."

Secretary Farless upon request read the poem written by John L. Stoddard having reference to the fortieth anniversary of Burditt & Williams, Boston. This was received with every mark of approval by the members present.

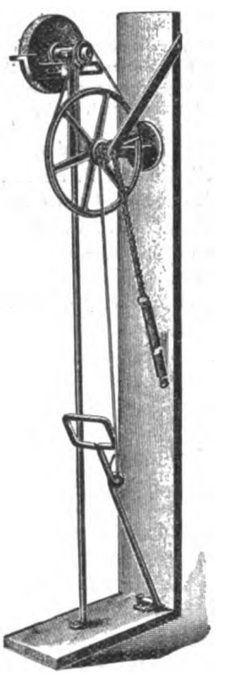
H. G. Janvrin offered the following resolution, which was amended at the suggestion of E. A. Loomis, of Providence, to include the recognized dealers in builders' material as well as Hardware dealers:

"The New England Hardware Dealers' Association requests the manufacturers of cut nails not to make any quotations or sales to anyone except he be a recognized dealer in Hardware or builders' materials."

The resolution was unanimously adopted, and a copy was ordered to be mailed to each of the manufacturers in this line.

The proceedings of the meeting were agreeably interspersed with instrumental and vocal music, which was furnished at intervals during the evening by Messrs. Van Buskirk and Blackmer. Charles E. Adams, president of the State Board of Trade, made a brief address, having reference to the work of that board, which now includes forty-three commercial bodies. It was decided to hold the June meeting of the season at some resort near Boston, to which the ladies would also be invited to attend. It has been quite a feature with the association annually to have an outing of this description, and every effort will be made to make this one worthy of remembrance in every respect. President Burditt appointed as a Committee of Arrangements for the June meeting: G. J. Mulhall, J. H. Williams, A. M. Wiley, F. R. Washburn. At 8 o'clock the meeting adjourned.

The National Hardware Association.



The Executive Committee of the National Hardware Association of the United States had a three days' session at the Galt House, Louisville, Ky., at the time our last issue was published, the object of which was to make necessary preparations for the annual convention, which will be held in Richmond, Va., beginning October 17. The principal work before the committee was to outline a programme to be followed by the convention, and also to hear reports from the trade in various parts of the country. Reports were received and read from Boston, New York, Chicago, St. Louis, Cincinnati, Louisville, Denver, Omaha, San Francisco and other of the principal cities, and they all gave evidence of the fact that the volume of business for the past year was better than the year previous. Various important movements in connection with the trade were discussed, especially the action of the American Steel & Wire Co. (known as the Wire Trust) and their arbitrarily shutting down so many of their factories, with the result it was felt it would have on general business. It was the opinion, however, of a majority of the committee that the factories were compelled to shut down because of an overproduction, and that no permanently injurious effect on the trade and market would ensue. The committee represented two hundred jobbing houses throughout the United States, controlling over $80,000,000 invested capital, and doing an annual business of upwards of $250,000,000.

Sandy Creek, N. Y.—Taylor & Ford.

Wabash, Ind.—E. G. Jones, Payne Block.

Wilkesbarre, Pa.—A Hardware store has been opened by the Anthracite File Co. in the old Helfrich building, corner of Hazle and South Main streets. George Murray, of Phelps & Straw, has charge.

Changes and Improvements.

Atlanta, Ga.—James T. Williams, one of the well-known Hardware men of Atlanta, has purchased an interest in the firm of the Anderson Hardware Co., and in future will be associated with that enterprise. Mr. Williams was for ten years connected with the Clark Hardware Co. In his connection with the Anderson Hardware Co. he will cover the same territory as with the former firm, which embraces the Central and the Georgia roads.

Bridgton, Me.—Fred C. Knight, the Hardware dealer, is grading the lot which he bought of John Roes. He is to build a storehouse for his own use.

Brownsville, Tenn.—Hertz & Hufertches, a Hardware firm which has been engaged in the business here for several years, is succeeded by a new firm, composed of C. C. Shaw, Arthur Smith, J. L. Shaw and D. D. Shaw.

Coshocton, O.—A warehouse is being put up in rear of the Ricketts Hardware store, for the storage of surplus stock.

Cripple Creek, Col.—A control of stock of the Moys Hardware Co. has been purchased by Gus Trolich, who has for a number of years been associated with the Morrell Hardware stores in the district.

Erie, Pa.—The new store front just placed in the Palace Hardware Store, on State Street, has a handsome frontage of 40 feet. The front is entirely made of iron with copper finish of the finest design. The platform for show windows is nine feet deep. The store entrance is in the center of the building and is about seven feet wide, with oak doors and plate glass, and fine Hardware trimmings to match the store. The curved glass, also the copper finishing, are after new designs.

Freeport, Ill.—L. I. Hackett has sold his Hardware business to the Lovell Hardware Co. of Janesville, Wis.

Jackson, Mich.—Barnard, Thurber & Fitzsimmons have opened their handsome new Hardware store in the building formerly occupied by J. B. Timberlake. The interior of the building has been completely remodeled and fitted up in the most attractive and modern style and it is filled with a complete new stock of goods.

Kensington, O.—B. C. George has moved his Hardware store into his new building.

Toledo, Ohio.—Ira A. Richardson & Son have leased the large four-story building, Nos. 408 and 410 Summit Street, for a term of years, to Birkmayr & Rodemich Bros., who will remove their retail Hardware store to their new quarters about July 1.

Uniontown, Wash.—L. F. Darr is reported to have succeeded the Uniontown Hardware & Furniture Co.

Valparaiso, Ind.—The Hardware firm of Starr Bros. has been dissolved, D. A. Starr retiring. The business will be continued by A. E. Starr, whose son Elmer will be associated with him under the firm name of A. E. Starr & Son.

Wabash, Ind.—Lawrence & Hipskind have succeeded Charles W. Davis in the Hardware business.

Wilmington, N. C.—Chas. A. Holland, who has been in the Hardware business at Maxton several years, has sold out his interest there and is now connected with the N. Jacobi Hardware Co., of this city.

Winnipeg, Man.—F. Babb and George Kirkland, both of J. H. Ashdown's retail department, have purchased the Hardware business of A. L. Ashdown, of Portage la Prairie, and will assume control in the near future.

Worcester, N. Y.—Charles Entapence is removing his stock of Hardware to the store in the Winigard block, lately vacated by Wilcox & Son.

Zanesville, O.—Hasting Bros. of this place, have purchased a Hardware store at Cedarville, Green County, Ohio.

Business Embarrassments.

Doylestown, Pa.—Cook & John, Hardware merchants of New York, have made an assignment to Charles S. Balderston, of Lahaska, for the benefit of creditors.

Montclair, N. J.—Fentzlaff & Zigler, Hardware dealers, have made an assignment to Scott German for the benefit of creditors. Liabilities $18,210.01; assets $23,254.32.

Syracuse, N. Y. —Bradford Kennedy, Harry L. Kennedy and James K. McGuire, who with George H. Kennedy compose the Hardware firm of Bradford Kennedy, Sons & McGuire, which failed over two years ago, have filed a petition in bankruptcy. In the schedule the total debts of the firm are given as $78,988.10, with no assets.

Burglaries in Hardware Stores.

Akron, O.—Louis Bickel, cutlery.

Bay City, Mich.—Miller Hardware Co., revolvers.

Boulder, Colo.—J. M. Taylor, cutlery.

Columbia, Pa.—Beittel's Hardware store, revolvers.

Fulton, Ky.—Shacklett, Thomas & Co., revolvers.

Fulton, Ky.—A. Huddleston & Co., cutlery.

Hillsboro, Tex. — Thompson - Lang Hardware Co., $150.

Petrolia, Ont.—E. & S. Pollard, $50.

Westlake, La.—Perkins & Miller, cutlery.

Wills Point, Tex.—R. F. Williams, cutlery.

Fires in Hardware Stores.

Athens, Mich. — Miller's Hardware store has been destroyed by fire.

Brownsville, Tenn.—T. B. King's Hard ware store has been destroyed by fire. Loss $3,000; insured.

Coatesville, Ind.—Stanley & Campbell's Hardware store has been destroyed by fire.

Edwardsville, Pa.—The Hardware store of Barney Cohen has been destroyed by fire.

Foxburg, Pa.—Dale's Hardware store has been destroyed by fire.

Gladwin, Mich.—Foster & Miller's Hardware store has been destroyed by fire.

Groveland, Mass.—Cobban Bros.' Hardware store has been damaged by fire. Loss $100.

North Baltimore, O.—The large Hardware store of Adams & Rogers has been destroyed by fire.

Ottawa, Ont.—McDougal & Cuzner's Hardware store has been destroyed by fire.

Ottawa, Ont.—The old church building, corner of Queen and Bridge Streets, occupied for years as a Hardware emporium by William Strachan, has been badly damaged by fire. The total loss will amount to about $7,000, which is fully covered by insurance.

Philadelphia, Pa.—The Hardware store of John Johnson, No. 6235 Woodland Avenue, has been destroyed by fire.

San Jose, Cal.—The Bogart Hardware store has been damaged by fire. Fully insured.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Camden, N. J.—The Economy Mfg. Co. has been incorporated. Capital stock $125,000, paid in $1,000; object to manufacture pneumatic tools. Incorporators: Jas. Arnold, Frank Eckhardt, and Albert Diehl.

Cortland, N. Y.—The Taughannock Emery Wheel Co., of Cortland, has been incorporated. Capital $30,000. Directors, W. G. Farrington, Jacksonville; G. H. Fowler, Taughannock Falls.

Clinton, Mass.—The Clinton Screen Co. has been organized by Eugene J. McCarthy and M. Arthur Murphy.

Greensburg, Pa.—A big stove manufacturing plant has been secured by the people of West Newton. Two hundred men will be engaged. A syndicate of Pittsburgh capitalists have purchased the grounds formerly occupied by the United States Radiator Co., and will at once begin the erection of an immense plant. The capital stock is $500,000.

Greenfield, Mass.—The Massachusetts Tool Co. is the name of the latest corporation to be organized in Greenfield. The three men at the head of the new concern are W. M. Pratt, who will be president; Charles D. Severance, who will be treasurer, and James C. Deane, of Colerain and Greenfield, who will be the third director. The company has a capital of $25,000, and is organized under Massachusetts laws. It will build at once a factory, 60x60 feet, part one and part two stories high, and a part with basement.

Huntsville, Ala.—The Southern Handle Mfg. Co. has been incorporated; to manufacture handles; capital, $60,000. Incorporators—W. A. Chipman, of New York City; M. R. Grace, of Huntsville, Ala.; T. S. Dutcher, G. W. Penwarden, K. B. Fullerton, all of Brooklyn.

Marion, Ind.—The Marion Machine & Tool Co. has been incorporated. Capital stock $25,000. Directors: L. C. Cole, Robert J. Main and John M. Main.

Milwaukee, Wis.—The Machine Tool Specialty Co. has been incorporated, with a capital of $2,500, by T. H. Hoyt, J. S. Helliwell and Franz Koszl.

Napanoch, N. Y.—A company to manufacture knives has been organized in this village. A lease has been taken of the Duval rake factory property, and it is expected to have it equipped and ready for business by Aug. 1. The new factory will be supplied with power from the Honk Falls electric plant.

Peoria, Ill.—The Bartholomew Co. has been incorporated; capital, $60,000; to manufacture coffee and peanut roasters, corn poppers, etc. Incorporators—J. B. Bartholomew, E. M. Voorhees and R. O. Stutsman.

Saco, Me.—The Quebec Mica Co. has been organized for the purpose of carrying on a general mining business, with $10,000 capital stock. The officers are: President, J. H. Means, of Saco; treasurer, P. C. Tapley, of Saco.

Saginaw, Mich.—The Michigan Wheelbarrow & Truck Co. has been organized and has invested $20,000 in building and equipping one of the best and most complete plants of its kind in the country. The men having the enterprise in charge seem to be thoroughly up to date and very expert in their business. They expect to be in full operation within five or six weeks, and will employ over fifty men at the beginning, with a probable increase to double that number inside of twelve months.

Shelby, O.—The Shelby Stove Co. has been incorporated to manufacture gas and gasoline stoves; capital, $50,000. Incorporators—W. H. Albach, J. Cureil, M. L. Love, J. M. Landis, G. W. Degarnon.

St. Louis, Mo.—The Standard Lead Co. has been incorporated; capital stock, $250,000. Incorporated by T. A. Johnson, Charles Dexter, D. P. Doak and others.

Worcester, Mass.—The Washburn Wire Co. has been formally incorporated with a capital stock of $1,000,000 preferred, and $500,000 common stock, under the laws of Maine. President Charles G. Washburn and General Manager John D. Curtis will retain their homes in Worcester. Charles E. Terry, for a long time associated with the Washburn & Moen Mfg. Co., will have charge of the selling department.

Changes and Improvements.

Boston, Mass.—The Chapman Valve Co., for many years located at 72 Kilby Street, has removed to 94 Pearl Street, corner of High, where it has greatly improved facilities for prosecuting its large and constantly increasing business in its specialties.

Covington, Ky.—Hildebrandt's Automatic Hinge Co. has increased its capital stock from $15,000 to $50,000.

Derby, Conn.—Negotiations have just been concluded for the removal of the emery manufacturing works of Frank W. Gilbert, at New York city, to Derby. Mr. Gilbert makes what is known as Turkish emery, importing the ore.

Lebanon, Pa.—The Lebanon Chain Works is building a large addition to its plant for foundry purposes. The present foundry is too small for use and the new building will be finished as soon as possible.

Lowell, Mass.—The Field Tool Co. is building a 50x120 addition to the west end of its building, and will put in several thousand dollars' worth of new machinery.

North Tonawanda, N. Y.—The business of the Niagara Radiator Co.'s plant, located on Tenth Avenue, near Oliver Street, has increased to such an extent during the last year that the company has found it necessary to enlarge its quarters and increase the capacity of its plant. Accordingly changes and additions have been started, and when finished will cost in the neighborhood of $30,000. The capacity of the plant will be increased fully one-half. The most important addition will be the building of an extension to the stockhouse, which will give it a floor space of 15,000 square feet. Another large building, to be used for a foundry, is also under way. The plant employs about 225 men, and when the additions are finished 150 more men will be put on. This will make a total of 375 employees.

Pittsburgh, Pa.—The American Axe & Tool Co. have purchased thirty-eight acres of river frontage at Glassport, near here, and will erect a $500,000 plant, the largest of its kind ever built. It is intended to centralize the plants of the combine at this point. The works will employ 1,000 men, and will be in operation before the end of the year.

Pittsburgh, Pa.—The Standard Chain Co., with headquarters in the First National Bank building, have acquired the business, plant and good will of the Falls City Chain Co., at Jeffersonville, Ind., across the Ohio River from Louisville. The plant is one of the largest in the country, has sixty forges and a daily capacity of more than a carload of iron and steel chains. In addition to the manufacture of chains the plant is well equipped for the manufacture of wagon Hardware, and has a large trade in single tree irons and other light forgings. The Standard Co. will begin operating the Falls City plant at once, and will probably take steps to enlarge the works during the Summer. The works are admirably located for caring for the chain and wagon Hardware business on the Ohio and Mississippi rivers, and the railroads make the plant site a good distributing point for the Southern trade.

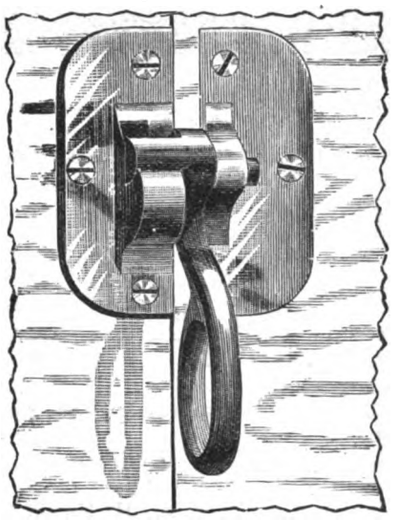
Worcester, Mass.—The Washburn Wire Co. have bought the wire plant and bicycle factory of R. H. Wolff & Co., Ltd., of New York. The plant is situated at the foot of East One Hundred and Seventeenth and One Hundred and Eighteenth Streets, on the Harlem River. There are wharf facilities directly connected with the company's buildings. The wire factory will be a permanent part of the Washburn Co.'s business, but the bicycle business will probably be given up ultimately.

Recent Fires.

Elm Park, N. Y.—The Standard Varnish Works have been destroyed by fire. The loss will exceed $300,000.

Evans City, Ohio.—The Specialty Mfg. Co.'s plant has been destroyed by fire.

Fond du Lac, Wis.—The Fond du Lac Implement Works have been damaged by fire to the extent of about $8,000; covered by insurance.



Southfield, Mass.—The whip manufactory of Hugh Barber has been destroyed by fire. Loss, $15,000.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. List, per doz., Enameled, $30.00; Full Nickel, $42.00.

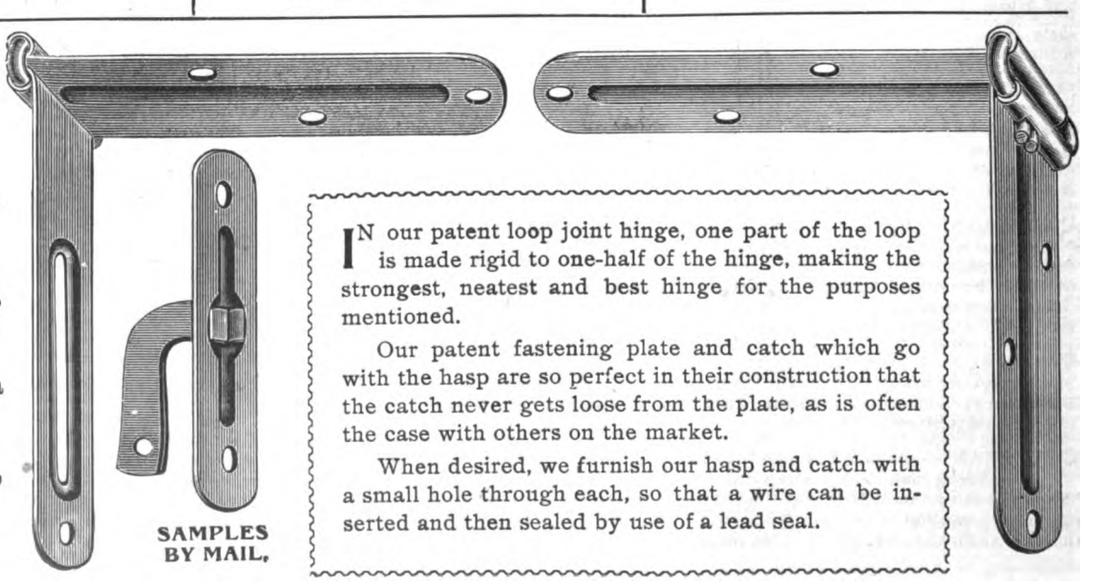
CARY'S PATENT

HINGE AND HASP



Designed Especially for

Fruit Crates, Milk, Egg, Cracker and other styles of Boxes, requiring a hinged cover.

CARY MFG. CO.,

19-21 Roosevelt St.,

NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"IT KEEPS ME POSTED."

Sickels, Preston & Nutting Co., Davenport, Iowa. [*Wholesale Hardware*]: HARDWARE keeps me posted not only on the market, but on new goods and specialties which are ever being manufactured. The trade reports are especially attractive, and give one information on the markets and business situation, as well as politics in various parts of this country.

Theo. Neuhaus.

"IN YOUR COLUMNS FROM THE FIRST."

Van Wagoner & Williams Hardware Co., New York and Cleveland. [*Hinges, Anvils, etc.*]: Having been represented in your columns almost from the first issue, we have a feeling of pride and pleasure in your achievements.

"ONE OF THE BEST MEDIUMS KNOWN."

C. T. Williamson Wire Novelty Co., Newark, N. J. [*Corkscrews*]: To present new goods to the trade we consider HARDWARE one of the best mediums known.

"USEFUL AS AN ADVERTISING MEDIUM."

Smith & Egge Mfg. Co., Bridgeport, Conn. [*Traps, Locks, Chains, Pulleys, etc.*]: We have found your paper very useful as an advertising medium.

"VALUE VERY HIGHLY."

Ausable Horse Nail Co., New York. [*Horse Nails*]: We value HARDWARE very highly as an advertising medium.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

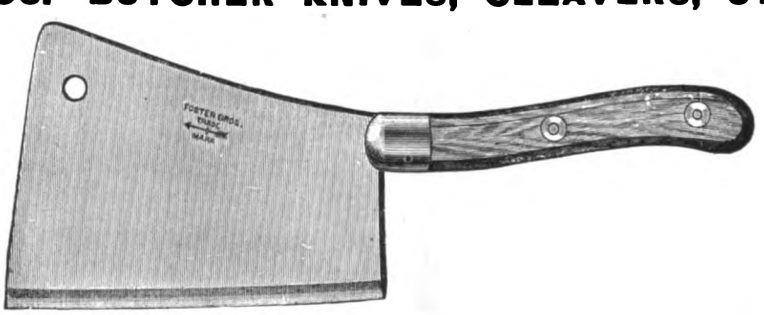
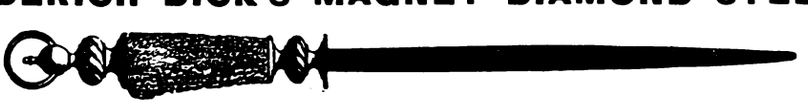
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us



has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

PHOENIX KNIFE COMPANY'S POCKET KNIVES.

Finest quality American Pocket Cutlery in large variety. Knives that are good sellers, and will give satisfaction to the user.

THE

ELECTRIC DROP STEEL FENCE RATCHET.

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

1st. It is simplest.
2nd. It is the lightest and strongest.
3rd. It is the most compact and rigid; no loose parts.
4th. Will tighten any length of wire desired.
5th. Adjustable to expansion and contraction.
6th. Can be attached to any point on the wire.
7th. It will tighten the wire uniformly because it draws equally from each way.
8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
9th. Can be used on any kind of post, either wood or iron.
10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
11th. When wire becomes loose or sags from use, it can be instantly tightened.
12th. No special wrench required; any wrench on the farm will operate it.
13th. The most important feature; it can be bought for Less Money than any other good ratchet on the market.

1864--Thirty-Six Years.--1900

WE have had an experience of thirty-six years in manufacturing Apple Parers, and think we are safe in saying we make a larger variety and more than all others combined. We make machines to pare, pare and core, and pare, core and slice, for hand and power, varying in retail price from below $1.00 to $20.00 each; and, if there is a real demand for an Apple Parer we cannot supply, we don't know it.

This illustration represents our White Mountain Parer, Corer and Slicer; a first class family machine at a small cost. It is stronger and better than any one of the imitations, and don't cost any more. We make a specialty of Apple Parers for Evaporators.

HARDWARE

The fifth annual meeting of the Texas Hardware Jobbers' Association will be held at Galveston, June 18th and 19th. A full attendance of members is anticipated.

The Hotel Pfister has been selected as headquarters for the convention of the National Association of Credit Men and the sessions will be held in the banquet hall. Registration, etc., will be held in the club room, and the committee will be in attendance Monday, June 11th, from 4 to 10 p. m., and Tuesday, June 12th, from 8 to 10 a. m.

Milwaukee is an ideal summer resort, having the benefit of cool, invigorating, bracing lake breezes. The celebrated Spring of Waukesha, the popular summer resorts of Oconomowoc and Lake Geneva, the famous Dells of the Wisconsin and Devil's Lake, are all within easy reach of the city, and are visited annually by thousands of tourists.

Fredonia Hardware Co., Fredonia, Pa., have recently succeeded to the old-established Hardware business of D. B. Robins; they respectfully request that jobbers and manufacturers of specialties will forward catalogues, price lists and other information having reference to shelf and heavy Hardware, stoves and tinware, agricultural implements, sporting goods, etc.

By a strange perversity which sometimes annoys even a well disposed advertiser, the "ad." of the Torrent Pump Co., Cleveland, Ohio, manufacturers of rubber pump buckets, etc., appeared in the columns of our previous issue with an erroneously placed cut, not illustrating the advantages claimed for their improved product. In this issue both cuts will be found properly attended to and present features of interest worthy of comparison.

At the regular meeting in May of the board of governors of the Hardware Club of New York, the following gentlemen were unanimously elected to membership in the club: Charles A. Hauck, Hardware Board of Trade, 4 Warren Street, New York; John H. Robinson, 253 Broadway, New York; E. H. Schley, 256 Broadway, New York; Frederic N. Stanley, Stanley Rule and Level Co., New Britain, Conn.; Joseph Van Cleft, Newburgh, N. Y.; Frank L. Wilcox, Berlin Iron Bridge Co., East Berlin, Conn.

The William Schollhorn Co., New Haven, Conn., desire that the name of their company may not be confounded in any way with the National Shear Co., who have been recently suffering financial embarrassment. At the formation of the National Shear Co. their shear business was sold to the combination outright, and they have since devoted their efforts to the manufacture of Bernard's Patent Pliers and tools, having achieved great success in the distribution of these popular goods.

There is every reason to believe the convention of the Southern Hardware Jobbers' Association, which will convene on June 13th, 14th and 15th at the Hotel Chamberlin, Old Point Comfort, will be one of the most enjoyable from every point of view ever held under its auspices. The officers have endeavored in every possible way to add to the comfort and increase the enjoyment of the assembled delegates, and a more unique spot to hold a convention of this kind it would be difficult to find. This being the tenth annual assembly, more than the usual interest is taken in it, completing as it does a decade of usefulness well remembered by its delegates. Many interesting papers will be read and considered; a number of manufacturers will assist in its harmonious proceedings, and as many of those intending to be present will bring their wives and daughters to grace the occasion, it will ever be remembered as an episode of Southern hospitality and business fraternity combined.

The paints and varnishes manufactured by Harrison Bros. & Co., Inc., Philadelphia, Chicago and New York, are offered in such an infinite variety that up-to-date dealers should find no difficulty in making a satisfactory selection from them for their stock. They comprise a line of ready sellers that has been prepared especially for doing small jobs of painting and retouching domestic requirements by the handy person of the household. Porch chairs, garden seats, flower pots, bicycles, buggies, wagons, etc., can be brightened up and improved by their use, not only making the article painted look well, but at the same time helping to preserve it. The progressive dealer who is on the lookout for something to sell that will naturally increase his profits should find it in the "Harrison Paints and Varnishes."

In the Building of Varied Industries at the Paris Exposition one of the noted attractions is the exhibit of the Bissell Carpet Sweeper Co., which is more especially prominent because of the display of their unique Ferris wheel, which has been pronounced in this country to be one of the most skillfully contrived electric attractions that has ever been made prominent as an advertising medium. The Bissell Carpet Sweeper Co. occupies an extremely prominent space at the Paris Exposition, and their exhibit is very assiduously looked after by their courteous Paris manager, Mr. Hermann. There is a possibility that another mechanical attraction of importance may be added to the Bissell Company's exhibit before the Exposition closes.

F. E. Kohler & Co., Canton, Ohio, advise us that they have licensed the Eureka Digger Co., of Chicago, Ill., and Iwan Bros., of Streator, Ill., to manufacture the post-hole diggers under their patents. These letters patent they claim prove that all diggers having handles not meeting, but held apart by any sort of device, so that when the shovels stand parallel, or where the handles stand apart throughout the entire length between the vertical planes of the shovels and the central vertical line, are infringements of their patents. The companies above named, after consultation with legal experts, decided that said claim was a just one, and preferring an amicable competition sought the proper license to avoid friction. F. E. Kohler & Co. state they feel that several other parties are infringing on their rights under said patent, and unless claims are admitted and settled, it may be necessary to make the United States courts decide the matter.

Among orders received recently by the J. D. Warren Mfg. Co., of Chicago, for improved Hardware shelving, was one for a nice outfit for Hauser & Parsons, of Franklin, Minn., which is their second order. Other good orders for store equipments were from the Moorhead Hardware Co., Moorhead, Minn.; Wm. Krombach, Keystone, Iowa, and W. S. Daskam, Houghton, Mich. The Warren Mfg. Co. are now making the first shipments of the $7000 outfit for the Gray & Dudley Hardware Co., at Nashville, Tenn., recently noted in our columns, which is now receiving the finishing touches at the factory. Additional shipments will follow in car-load lots as rapidly as possible during the month. The factory is still crowded with orders calling for immediate attention.

HARDWARE

VOL. XXI. JUNE 10, 1900. NO. 5.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the

HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

The business transacted by many of the jobbers during May came in the nature of a surprise to most of them. There was a well-defined fear that the drop in the price of nails, which was of the most pronounced character imaginable, followed as it was by the numerous concessions of a more conservative kind from manufacturers of the iron and steel products from pig iron up, would seriously affect the customarily steady demand for goods from the retail trade during May.

Confidence, however, was not destroyed; consumers purchased as their wants became known, with but little hesitation; those in the retail trade not overburdened by surplus stocks, bought freely from the jobbers, many of whom had stock of some kind heaped up waiting for an opening. The various trade disturbances in the shape of strikes for "fewer hours and more pay" seemingly "scotched," if it didn't kill, the general business, in the localities largely affected by these erratic impulses of the pipe-dreaming laborer; but the business for May stiffens the sinews of traffic, and the prosperous farmer again becomes the head of the procession.

The reconsideration given early in the spring to the lessened demand for plain and barb wire, which resulted in the low quotations being normal in April, has been a godsend to the jobbers and retailers alike. Such an immense business followed the reduction in price that the large surplus stocks held by the manufacturers were wiped out of existence; a well-managed scarcity followed, making the entire trade clamorous for the delivery at once of their belated orders, in order to realize the profits they had already calculated as earned. That condition of affairs rushed orders for other wire products not suffering from any decline; and screen doors, window screens and wire cloth became difficult to obtain, even at prices that under ordinary conditions would be regarded as prohibitive.

One of the most gratifying things to chronicle is the fact that, in obedience to the demands of the trade, emphasized as it was at the Pittsburgh convention last fall, the American Steel and Wire Company have announced their return to the old terms of "60 days or 2 per cent cash in 10 days." This enables the nail business to return fully to its wonted channels of delivery, and no longer compels the jobber to wait 60 days for the returns on his own sales of nails, allowing 2 per cent. discount for cash, while compelled to pay for his purchases in 30 days, under a 1 per cent. rebate only, for prompter remittance.

This 2 per cent. cash discount feature of the Hardware trade should not be discouraged by either the jobber or manufacturer; it is a premium for prompt payment worth considering, and a great discouragement to those of small capital doing too much business to the square inch, and coming to grief inevitably at some later day when the financial sunshine fails to keep the clouds away.

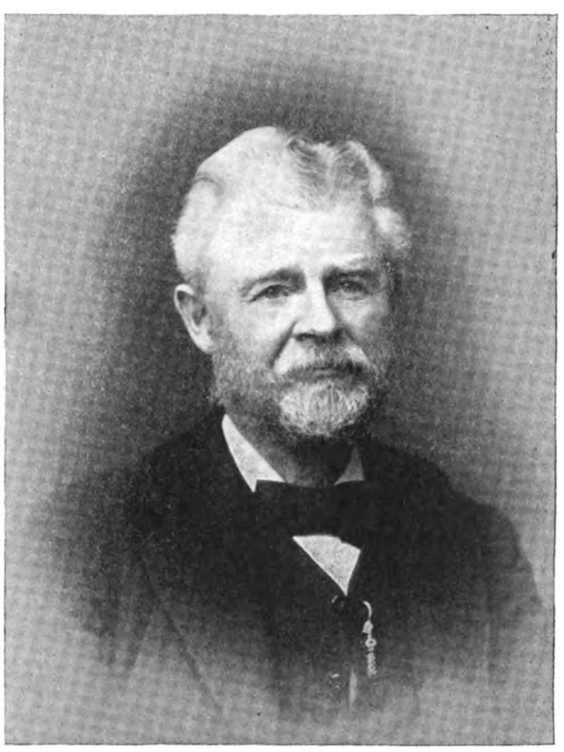
There have been a few minor changes which have not affected the market seriously. The manufacturers are not desirous of swapping discount sheets while crossing a season. Where raw materials find a sufficiently well developed demand in time for next season's production, great reductions need not be apprehended, but our productive greatness has of late been so remarkably accelerated by constantly increasing facilities, we must have a steady demand, well developed markets, and orders booked ahead, or else production must be suspended in spots, mills closed, hands left idle and an ingrowing fear of a cloudy future, to give the buyers in our industry moments of uneasiness not to be wondered at.

The concentration of our productive power in the hands of a few large organizations, makes this state of affairs when deemed necessary, possible at short notice. There no longer exists the desire to make up a surplus stock and sell it for some profit or none, in order to keep things at the factory in normal condition.

The export outlook is studied with intelligent care, as the most desirable means of keeping our home demand in steady running order; and having in view how essential it is for the trade as a whole to have prices maintained within reasonable limits, when unloading becomes essential to even up full stocks, some concessions are apt to be made abroad before they are quoted in the domestic markets.

Our Colonial Prosperity.

Exports from the United States to Cuba, Porto Rico, and the Hawaiian, Philippine and Samoan Islands will reach $45,000,000 in the fiscal year which ends with the present month, and will be more than three times as much as in 1896 and more than twice as much as in any year of our commerce with those islands except in the years 1892-3-4, when reciprocity greatly increased our exports to Cuba and Porto Rico. To Cuba the total for the fiscal year seems likely to be fully $25,000,000, against $7,530,000 in the fiscal year 1896 and $24,157,000 in the great reciprocity year 1893, when exports to that island were more than double those of five years earlier. To Porto Rico the exports of the year will be in round terms $2,600,000, against an average of $2,750,000 in the reciprocity years 1892, 1893 and 1894, when exports to that island were double those of earlier years. To the Hawaiian Islands the total for the year will be about $15,000,000, or five times as much as in 1893, nearly four times as much as in 1896 and more than double the total of 1898. To the Philippines the total for 1900 will be about $2,500,000, or more than in the entire fifteen years since 1885, the date at which the first record of our exports to the Philippines was made by the Treasury Bureau of Statistics. To the Samoan Islands the exports of the year will be about $125,000, or nearly as much as in all the years since 1896, at which date the official record of our exports to those islands began.



On the import side, Cuba begins to show something of her old-time strength as an exporting island, as the total imports into the United States from Cuba for the full year will

Digitized by Google

show a total of $31,000,000, against $15,000,000 in 1898 and $18,500,000 in 1897, though they still are less than half the average for the reciprocity years 1892, 1893 and 1894, when our imports from that island averaged over $75,000,000 per annum. From Porto Rico the imports of the year will be $1,350,000, which is less than the total for any preceding year since 1880, and is presumably due to the destruction by last year's tornado of the crops which supply Porto Rico's chief articles of export. From the Hawaiian Islands the imports for the full fiscal year will be $21,000,000, or double the average annual importation for the period prior to 1896 and 20 per cent. higher than in any preceding year, while from the Philippines, despite the war conditions, which reduced producing and exporting power, the imports will be larger than in any year since 1894.

Death of Ebenezer L. Cooper.

Ebenezer L. Cooper, a veteran Hardware man, well and favorably known to the active Hardware trade for a number

EBENEZER L. COOPER.

of years beyond the memory of the oldest of his associates who survive him, died in Stamford, Conn., on Sunday, May 27, from heart trouble. He was seventy-nine years old. A son and daughter survive him. Born in New England, 1821, he came to New York in his seventeenth year and was apprenticed to the Hardware business for three years, in accordance with the prevailing custom in the early days of the industry, spending those few years of his life with Samuel I. Hunt, whose brick store had just been erected on the corner of Vesey and Greenwich Streets. This building was afterward occupied by Peter Duryee & Co. for a number of years, and was eventually swallowed up in the extension of West Broadway. He graduated from there at a later date to accept the position of clerk with Kissam, Bryce & Jones, who were then (about 1842) at 228 Pearl Street, in which street and in Maiden Lane and vicinity the centre of the Hardware jobbing district was at that time located. This firm was succeeded by William & James Bryce, Mr. Cooper remaining in their employ until 1862. He became interested subsequently in the commission Hardware business at 14 Beekman street, and still later at 51 Murray Street, being associated with a Mr. McKenzie, who was formerly in the employ of the Bryces. He also represented for a time the Miller Bros' Cutlery Co., being at that period their New York representative. About 1867 he became the general manager of Coffin, Lee & Co., an old Hardware jobbing house, on Warren Street, doing business with the Southern States previous to and after the Civil War.

The opportunity came to Mr. Cooper in 1878 to receive from Washington the important appointment of government inspector and examiner of supplies furnished on contracts with the Indian Department, a highly responsible and honorable position, to the duties of which he brought the experience of a lifetime, accompanied by a training in the detailed and comprehensive knowledge of its requirements possible to but few men in the Hardware industry. This fact was acknowledged by his retention in this position for seventeen years, through administrations which, although of opposite politics, admitted the necessity in some places under the government of letting the best man win. In all the years officially devoted to the interests of the government, both in Chicago and New York city, no decision of Mr. Cooper's ever met reversal, and when, his health failing in 1895, being in his seventy-fourth year, he was compelled to resign, the government, upon accepting his resignation, made note of the fact above mentioned and referred to his inflexible honesty and trustworthiness in language not usually accompanying such papers of acknowledgment.

Mr. Cooper was a man of steady and industrious habits, extremely methodical and systematic in all his work, thoroughly informed in every branch of the Hardware business from the ground up, having made a study of every stage from a knowledge of the metals which form the materials to the mechanical experience necessary to obtain the finished product. His memory was of a superior kind, and he rarely forgot any of the details of a transaction in which he participated. He was possessed of an incorruptible honesty, undeviating convictions of right and wrong, with a firmness and steadfastness of principle which formed a bulwark against many of the temptations that assail one whose strength of character is an unknown quantity. The fact that Mr. Cooper held the responsible position under the government for the long period he did was the best indorsement of his fidelity to the interests of the government which the records of this department have ever shown, he having devoted the best years of his life to a single industry, which claimed all his sustained efforts and makes his memory deserving of a commemoration which this tribute hopes to subserve.

Kearney & Foot Files at Paris Exposition.

Kearney & Foot Co., 100-102 Reade Street, New York, have a very handsome exhibit of the products of their works at

FIG. 1.

the Paris Exposition. The main exhibit, Fig. 1, will be found in Group XI., Class 65, of the United States Hardware Exhibit, located in the gallery of the Palace of Mines, Champ de Mars. As this exhibit is composed entirely of K. & F. files and rasps, 1550 in number, we are pleased to present

Digitized by Google

herewith illustrations of the same. They exhibit a wonderful degree of artistic excellence, considering the material from which they are composed, which certainly is much more prosaic in character than these handsome displays give evidence of. The elaborate cut, Fig. 1, shows a display space 8 feet wide, by 6 feet 6 inches high. The auxiliary exhibit, Fig. 2, will be found in Group IV., Class 22, United States Collective Mechanical Exhibit, on the ground floor of Palace of Machinery and Electricity, Champ de Mars. The size of space taken by this display is 6 feet high by 3 feet wide. The care and attention given to this exhibit by this well-known concern impels them to send invitations to their friends and customers, which read as follows: "You are

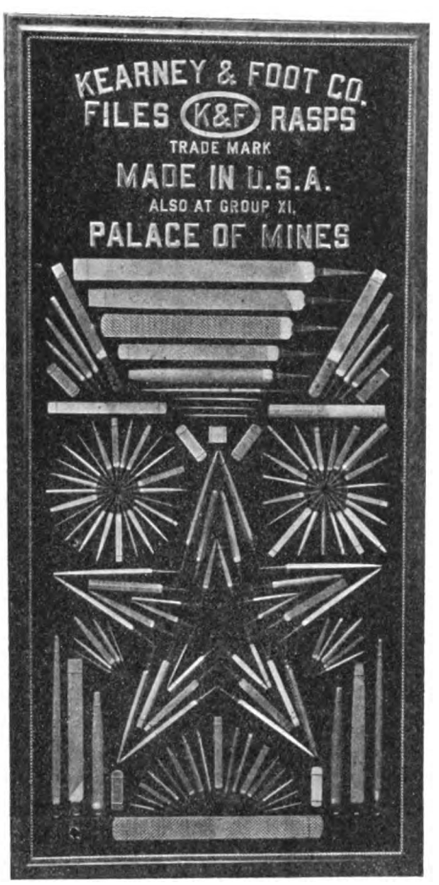


FIG. 2.

cordially invited to visit our exhibits at the Paris Exposition, April-November, 1900," and we have no doubt the invitations will be largely availed of by those who receive them.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—I have an agreement with a firm as their agent in New York State. The firm is composed of two or three members. My agreement reads as follows: "The firm of A, B, C & Co. hereby appoints ——— agent, etc." It is signed "A, B, C & Co., by A." Is this binding upon all the members of the firm, or should each member have signed it? The partner B and I have had a personal disagreement, and he has persuaded his partners to break their contract with me, on the ground that A acted without B's consent.

REPLY.—A contract signed as you have described would bind each member of the firm of A, B, C & Co. A partner is the general agent of his copartners, and as such his contracts are binding upon each member of the firm. As against third parties one partner cannot deny the authority of his partner to do an act within the scope of the partnership business.

QUESTION.—A debtor sends to his creditor, whose claim is unliquidated, a check, stating that it is in full payment of the account existing between them. The creditor accepts and uses the check. The creditor notifies the debtor that the check is not sufficient in amount and sends a bill to the debtor showing a balance due, after crediting the check. The debtor maintains that no balance is due and claims that the check is payment in full of the account. The creditor contends that a balance is due and owing, and recognizes the check only as a payment on account. What are the rights of the parties?

REPLY.—A state of facts similar to the facts in question arose in Reynolds vs. Empire Lumber Co., in which the Supreme Court refers to Fuller vs. Kemp (138 N. Y., 231) and Messoig vs. Tomlinson (65 Hun., 491), upon which two cases the court bases its decision. The cases hold that where a check is given and accepted, as set forth above, the creditor cannot afterward claim that the debt was not paid in full, even though he notify the debtor that the check was not sufficient in amount.

QUESTION.—For the last three years I have leased a building from an estate, and have sub-leased the upper portion of the building. It became necessary to make some repairs on the walls of an adjoining house, which extend above the roof of the building I occupy, and with which I have nothing whatever to do. In making these repairs the workmen tramped across the roof of my premises, and in so doing injured the roof, a discovery that was only made some days after the workmen had finished, the immediate cause of the discovery being a severe rainstorm, that caused a loss to my tenant who occupied the upper floor of the building of several hundred dollars, whose goods, being of a delicate character, were easily ruined in the rain. My tenant appealed to me to make good his loss, and I have appealed to my landlord (the estate), which refuses to do anything, and refers me to the contractor whose men were the direct cause of the trouble. The contractor denies his liability. Where does my remedy lie?

REPLY.—Your right of action is against the contractor and the employer of the contractor. These parties were under a duty not to injure either yours or your tenant's property, and they are legally responsible for such injury. Your tenant should begin an action for damages against the contractor and his employer.

QUESTION.—A certain party made a verbal agreement with me, under which I was to be paid a certain weekly salary for soliciting orders. In addition to the salary, I was to receive a percentage on the net proceeds of all sales. Though this was a verbal agreement, its terms were not, and never have been denied, by the party who employed me; now, the sales made by me amounted to more than $2,500, upon which there was presumably a profit of at least $1,000, the nature of the goods being such that profits were bound to be unusually large. When the transactions had been completed, however, the employing party claimed that no profits whatever had been realized, and that, therefore, I was not entitled to any percentage over and above my salary. The employer refused to give me detailed bills of his expenses in connection with the matter, and threatened me with personal violence when I insisted upon receiving a statement. Several unbiased experts have agreed with me that the profits must have been sufficient to entitle me at any rate of percentage to $400. Can I compel my employer to issue a statement to me?

REPLY.—Under the circumstances of this case, as they are presented to us, we are of the opinion that you could bring an action against your employer for an accounting. If you can establish your agreement, and by so doing your right to a percentage of the profits of the business, the amount of which is not known to you and is known to your employer, you would be entitled to an accounting.

"Ruggles, how old are you?"

"If I'll tell you will you agree not to ask any more questions?"

"Yes."

"Well, I'm on this side of fifty."

"From which side are you looking at—Oh, I forgot."—

Unparalleled Record in Exportation of Manufactured Goods.

An exportation of $40,000,000 worth of manufactures in thirty days is a record unparalleled for American manufacturers. That is the record for the month of April, 1900. The details of the April exportations—just completed by the Treasury Bureau of Statistics—show that the exportations of manufactures during that month were by far the greatest of any month in our history and within a fraction of $40,000,000. This gives assurance that the exports of the fiscal year which ends with June will considerably exceed $400,000,000 and be nearly three times as much as a decade ago. This phenomenal increase in exportation of manufactures is especially striking when compared with the progress made by European nations, our rivals in the attempt to supply the world's market with manufactured goods. Great Britain's exports of manufactures show but slight increase since 1890, and an examination of the export record of the principal European countries fails to disclose an instance in which the increase has been as much as 25 per cent., while that of the United States meanwhile has been more than 150 per cent.

An examination of the details of our own exportation of manufactures shows that it is in the production, manufacture and exportation of metals that we seem to excel. The history of nations and peoples shows that great groups of people frequently excel in certain industries, and the growth of our exportation, as well as our domestic production of manufactures, seems to point to metals as our most successful line of work, especially at the present time. In 1889 manufactures of metals formed less than 20 per cent. of our total exportation of manufactures, and in 1900 will be about 45 per cent. of our exports of manufactures. The increase in exportation of metals and manufactures thereof in the decade 1889-1898 was 339 per cent., while the increase in the exportation of all manufactures in that time was but 110 per cent., and the increase in manufactures other than those of metal during that time was but 55 per cent. In this statement of the exportation of manufactures of metals only those articles composed exclusively of metals are included, those made up in part of metals, such as railway cars, agricultural machinery, etc., being included in the other manufactures. The rapid increase in the exportation of manufactures of metals is shown by the fact that the exports of brass and manufactures thereof in 1889 were but $321,137, and in 1900 will reach $1,700,000; instruments for scientific purposes increased from $1,033,338 to $2,770,803, and in the year about to end will reach nearly $6,000,000; copper and its manufactures, which amounted in 1889 to $2,348,954, will be more than $50,000,000 in 1900; iron and steel increased from $21,156,077 in 1889 to $70,406,885 in 1898, while in the fiscal year 1900 it will exceed $100,000,000.

Another interesting fact developed by the examination of the figures is that the European countries, in which manufactures have been long established, furnish as satisfactory a market for our manufactured goods as do the countries where manufacturing has not yet been largely developed. In reapers and mowers, clocks and watches, sewing machines, bicycles and the various manufactures of iron and steel, and many other articles of the higher grades of manufacture, the European countries in which manufacturing plants and machinery and skilled workmen abound furnish a market for a large share of our exports, thus failing to justify the expressed fear that a development of manufactures in countries where we are now seeking a foothold for our commerce would destroy their value as a permanent market.

In this attempt to show the growth of the exportation of each article in every direction it has only been practicable to measure the growth by values, as the varying value of the units of quantity designated by a common name would prove confusing and misleading. A statement of the number of watches, clocks, sewing machines, typewriters, electrical instruments, mowers and reapers, carriages, articles of glass and chinaware, builders' Hardware and miscellaneous articles of cotton and woolen goods, for instance, in which the value of units ranges from a few dollars to hundreds in a single class, would convey no information for comparative purposes and does not supply any facility for measuring the real growth of the industry or the commerce in it, as does the simple statement of total values by classes. On the other hand, the well-known fact that prices of nearly all classes of manufactured goods have greatly decreased, by reason of cheapened and improved methods of production, renders a mere statement of values somewhat misleading in an attempt to determine the actual increase in the exportation of numbers or quantity of nearly all articles.

As already indicated, the largest growth in our export of manufactures is in those of metals. The largest class of manufactures of metals exported is that of iron and steel. In 1880 the export of manufactures of iron and steel was $14,716,524, and in 1900 will exceed $100,000,000, or more than seven times that of 1880.

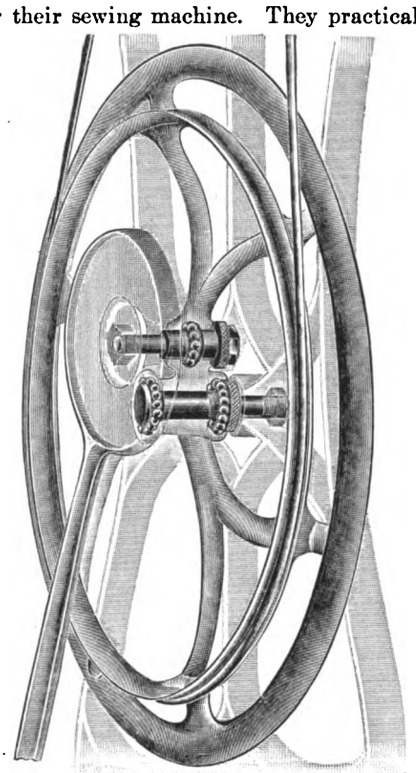
In no feature of our export trade has there been a more remarkable growth during the decade than in rails for railways, especially those of steel. The total exportation of iron rails in 1889 was but seven tons, and in 1898 2,769 tons, the value rising from $240 in 1889 to $37,150 in 1898. In steel rails, however, the growth was even more remarkable, the number of tons exported in 1889 being 7,398 and in 1898 229,783, while the value increased from $235,387 in 1889 to $4,613,376 in 1898, and in the fiscal year 1900 seems likely to reach $8,000,000. This increase has been especially marked during the past three years, the exports of steel rails in the fiscal year 1896 being $540,797, those of 1897 $2,482,208, and those of 1898 $4,613,376, those of 1899 $5,298,125, while the first ten months of the present fiscal year show a gain of about $2,000,000 over the corresponding months of last year. While this rapid increase in due to a generally increased demand, the countries showing the most marked growth in their purchases of steel rails from the United States are Russia, Canada and Japan.

Prolonging the Life of Farm Machinery.

Most farming tools are used during only a fraction of the year. Diversified farming requires a great variety of tools and agricultural implements. The average farmer lays these aside in a hurry, and generally neglects to oil the polished parts of plows, spades, sickles, etc., and when he again wants to use them he finds, to his annoyance and cost, that they do not work well, are sometimes out of order, and perhaps need slight repairs. Valuable time must then be spent to put the machinery in proper working condition. A few hours spent on rainy Fall or Spring days, or in the winter, when outside work cannot be carried on, might have saved him time which in the busy season means many dollars. A great percentage of agricultural implements rot or rust out instead of wearing out. Money used in building sheds, under which wagons, mowers, binders, seeders and the like may be sheltered, is well spent and soon proves to be a paying investment. But little skill is required to keep ordinary farming machinery in excellent condition. Few farmers are so fortunate as to be blessed with a mechanical turn of mind, but every one can, by the expenditure of a small amount of time and a little care, prolong the life of machinery for many years.—*American Exporter.*

"I want to get one o' them things," said the old lady, pointing to an assortment of thermometers.

"Yes, ma'am," replied the dealer; "how high do you care to go?"



"Why, not too high and not too low. I want one that'll keep my house just right this summer."—*Philadelphia Press.*
